

The road to rebuilding confidence

- Service Design
- Product Design
- User Experience

An experience in high school led me to give up my dream of becoming a professional athlete, and now I want to do something for my younger self. Through literature research, I identified my condition as an episode of Functional Movement Disorders (FMDs) and learned that recovery requires comprehensive treatment to rebuild confidence.

Using a systematic service design perspective, I developed a home recovery program for teenage FMDs patients. The core solution features progressive treatment devices, supported by an integrated app for device control, community engagement, and psychological support.

Inspiration

This is something I experienced first hand, in a way this event changed my life, I will always remember it was late autumn 2017...

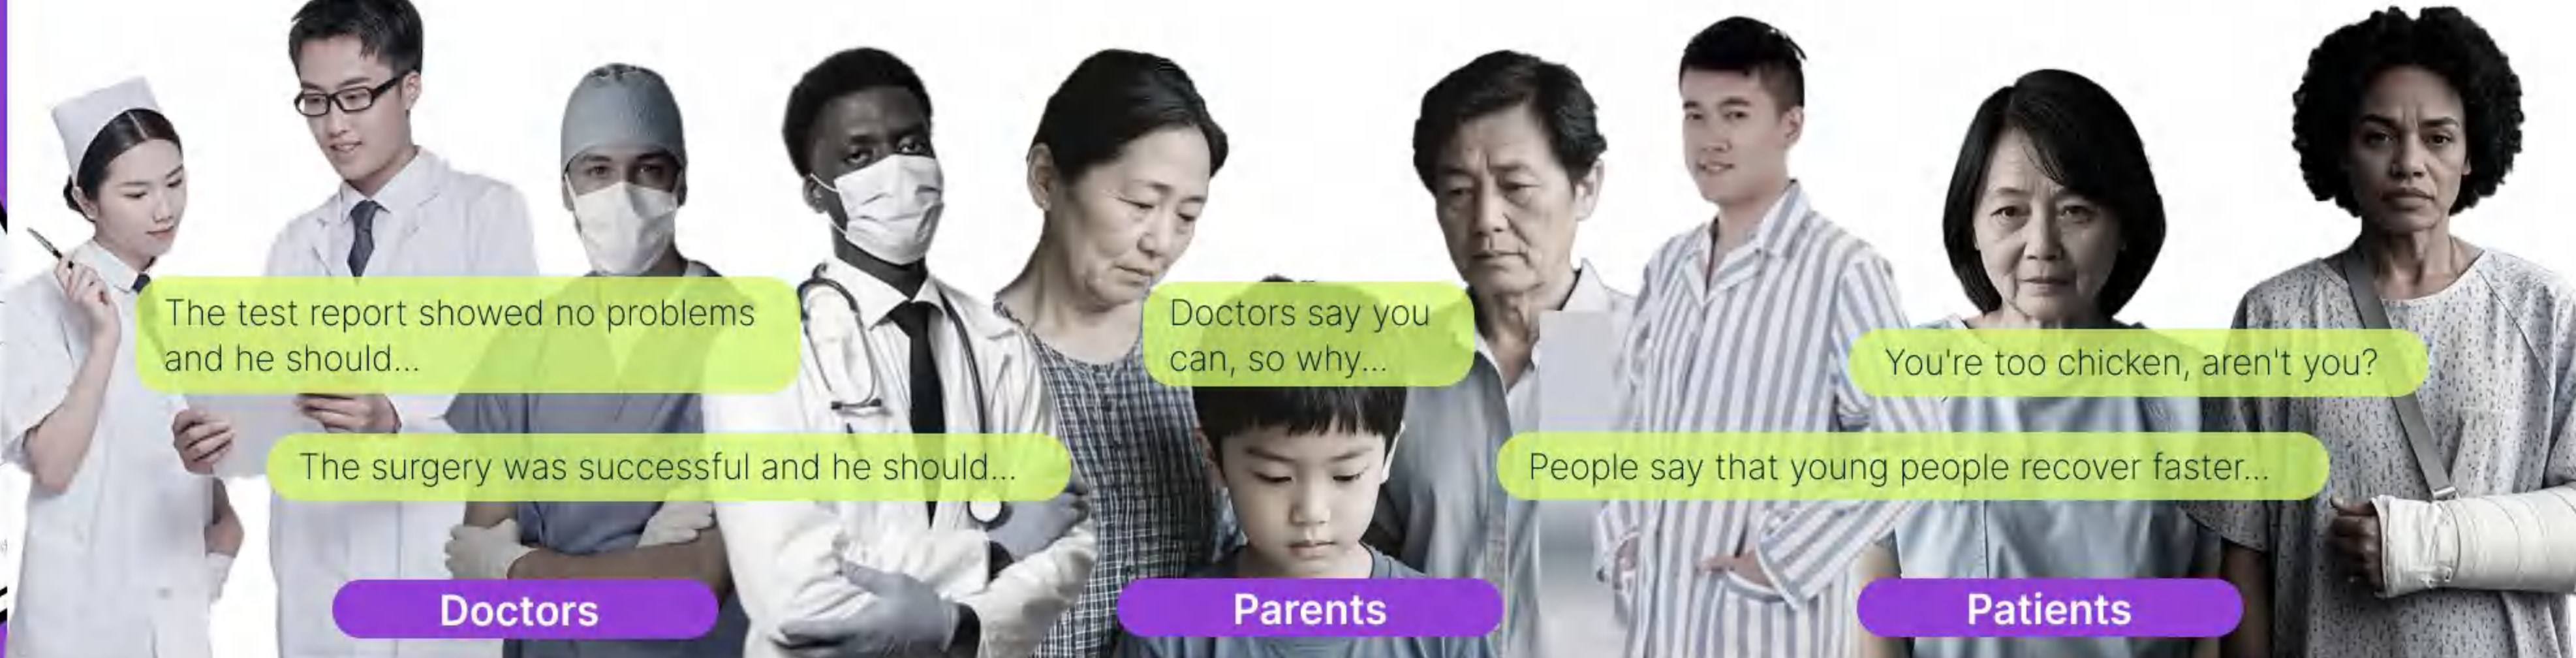

It was the sports day and I was participating in a 4*100m relay when I suddenly felt a sharp pain in my lower back and then fell down on the track

I was quickly taken by ambulance to the hospital, fortunately it was only a small bone pulled from a muscle and required a minor operation.

The day after the operation, I suddenly realised that I couldn't move my leg in any way, it was like I had lost all control of it!

Strangely, medical tests proved that I could lift my legs, so people around me were puzzled.

The test report showed no problems and he should...

The surgery was successful and he should...

Doctors say you can, so why...

You're too chicken, aren't you?

People say that young people recover faster...

Eventually I was able to lift my leg, but I ...

Gave up the dream of playing professionally

Becoming less confident in life

Become silent in character

“ Later in life I've been trying to do something about myself that day, and after some research I found out that it's actually a mental disorder called **FMDs (Functional Movement Disorders)** . ”

Literature Research

In conjunction with personal experience, this project focuses on adolescent patients.

FMDs (Functional Movement Disorders)

Simply put, FMDs are psychogenic movement disorders with **psychological factors** as the central trigger, but physical function tests are normal

My situation

In cases like mine, which start with a sports injury and are actually caused by a combination of psychological factors (fear, low self-esteem, worry, agitation...) athletic disorders are also in its scope.

Clinical Data

'FMDs are not rare among adolescents, with a gradually rising prevalence.'

Analysis of FMDs patient data from 1968 - 2019 showed **6.8%** were adolescents. Other studies reported FMDs patients could make up around **10 - 20%** of movement disorder cases in paediatric neurology outpatient clinics.

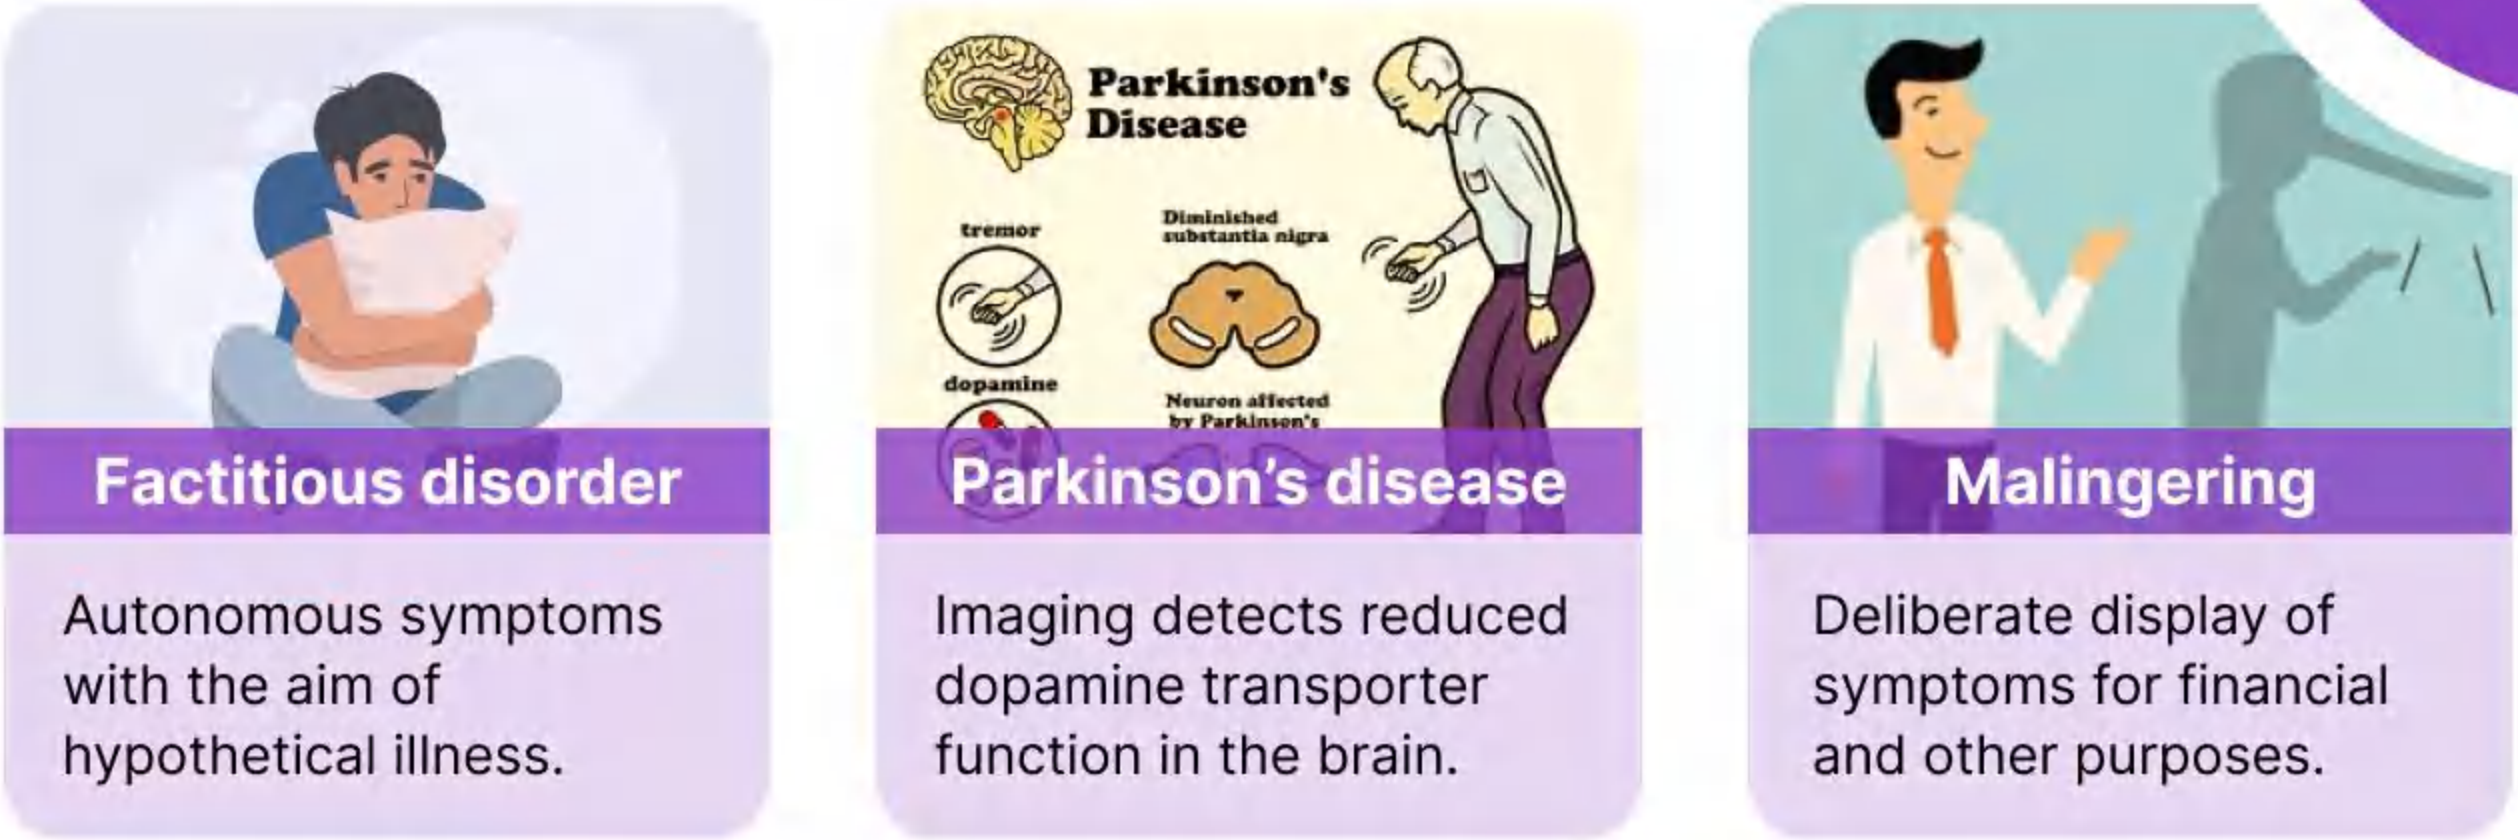

Most common clinical manifestations of FMDs in childhood and adolescence

I suffer from lower limb muscle weakness as a result of this clinical presentation, and this project will focus on this presentation as well.

*It can be detected with the Hoover sign, a classic sign for diagnosing functional weakness of the lower limbs

Clinical diagnosis requires caution to differentiate from similar diseases.

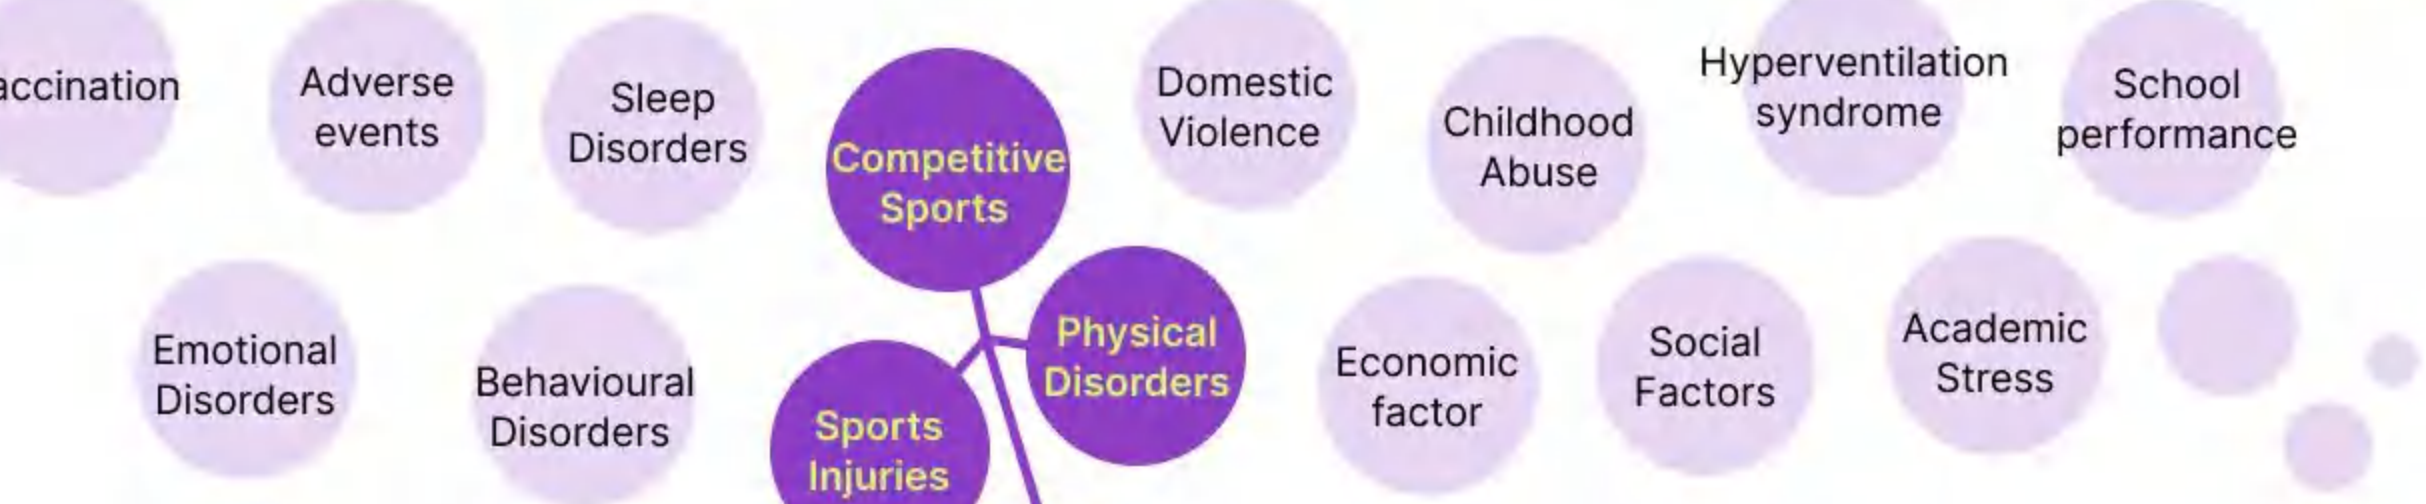

Distinguishing features - Sudden onset and abrupt cessation

'While most movement disorder disorders progress slowly, symptoms in FMDs occur suddenly, can be triggered by events such as trauma or illness, and can dramatically remit, or fluctuate in symptoms during the course of the disease.'

Disease characteristics

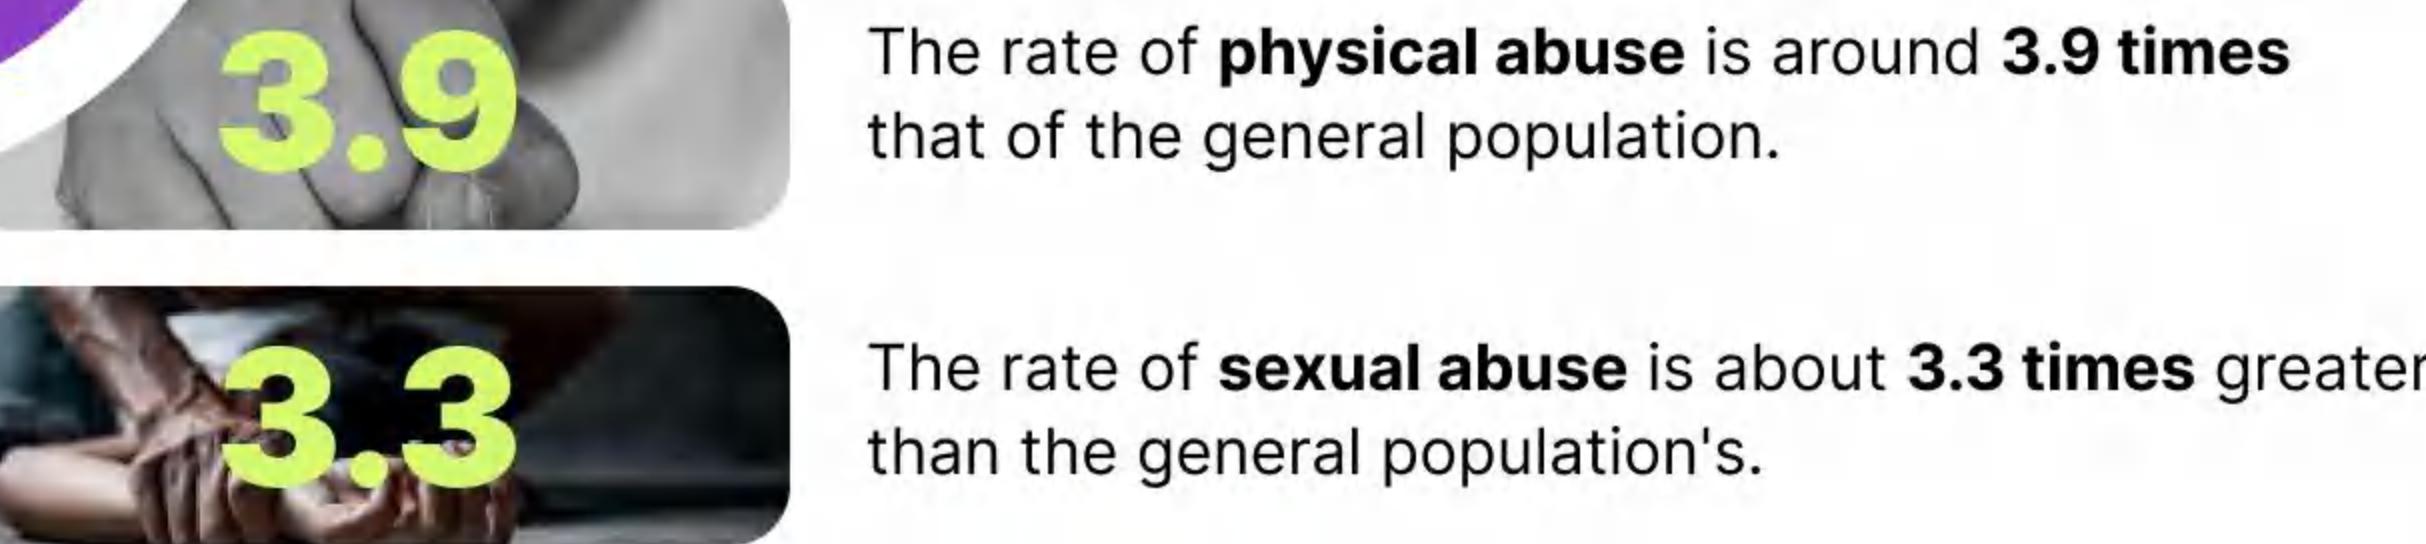

There are numerous triggers associated with adolescent patients with FMDs

The project focuses on such triggers (Personal Experience)

Sports injury type of causation + Combined psychological factors → FMDs

Research data reveals patients usually have a history of childhood trauma.

Family of 3

Household disposable income £4W

Academically minded and strict tutors

Small obstacles in parent-child communication

User profile

Basic information

Boy 16 years old Student Quiet and a bit withdrawn Medium grades

Friendly and courteous

Lots of casual friends, few close ones

Defensive and not very trusting of others

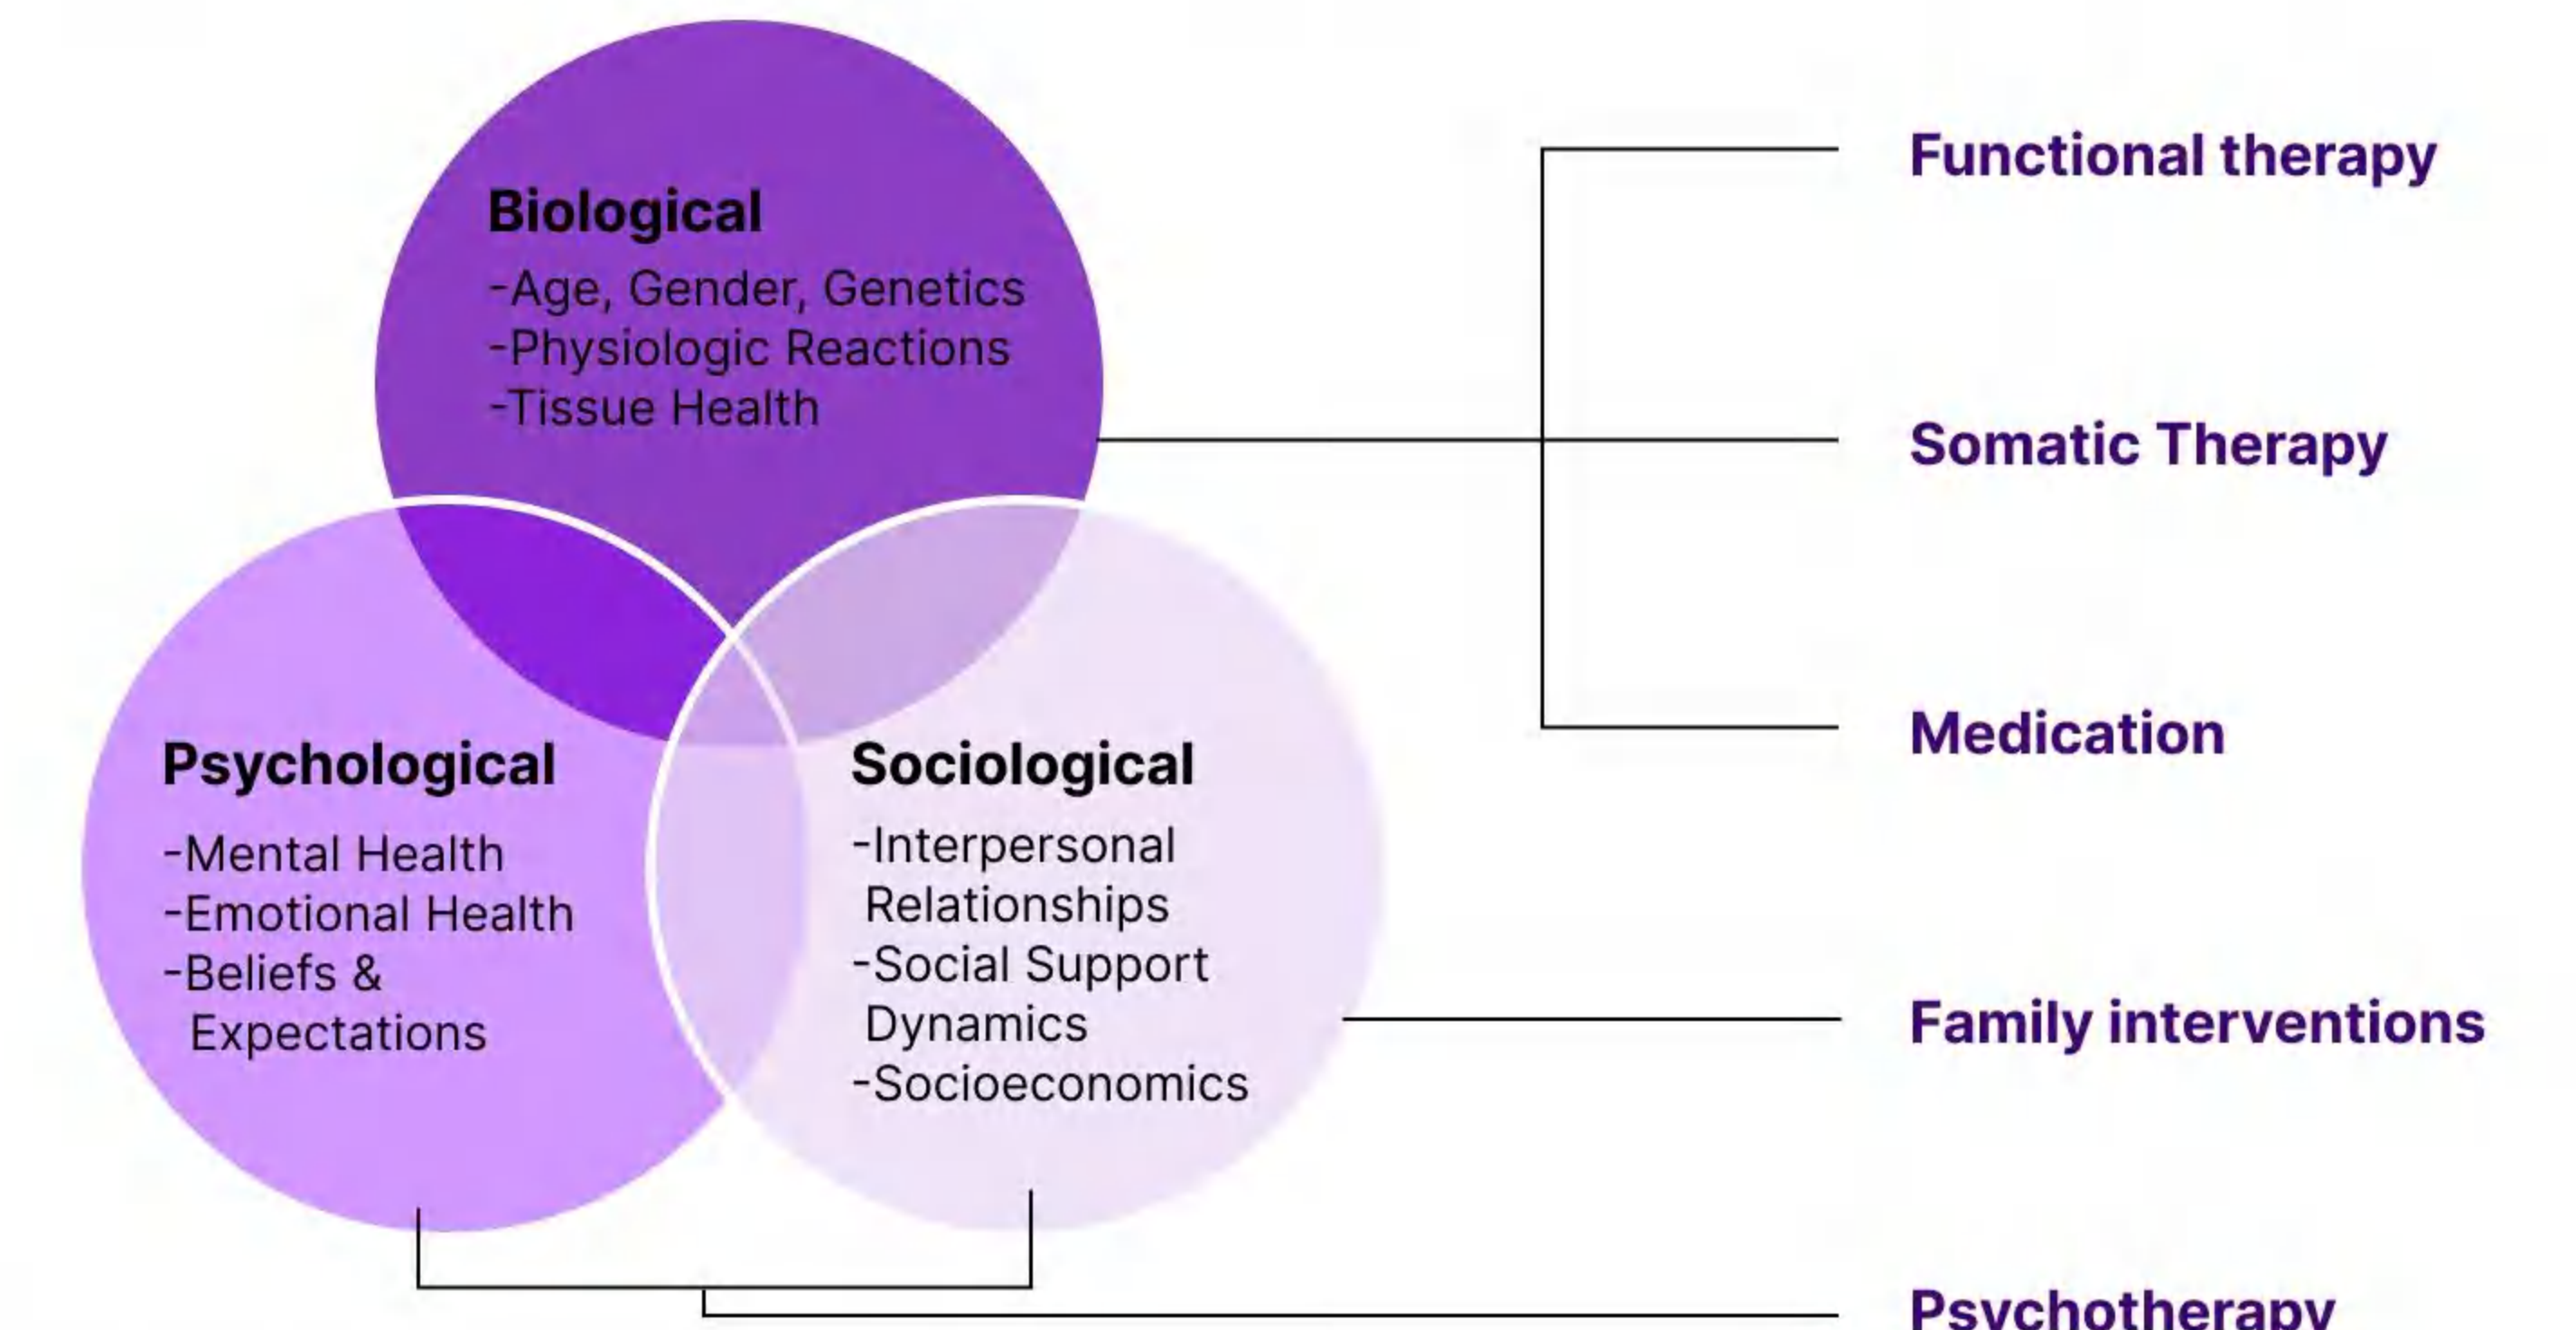

Patient (User) studies

Theory & treatment

The current consensus is to adopt a multidisciplinary model for treating this disease as its pathogenesis adheres to the BSP model.

BPS model (biological - psychological - social model) → Systematic service design

The traditional biomedical view deems biological indicators as the final determinants of disease, while the BPS model embraces the patient, disease, and environment. Physicians thus have to take into account the roles of social and psychological factors in addition to biological ones.

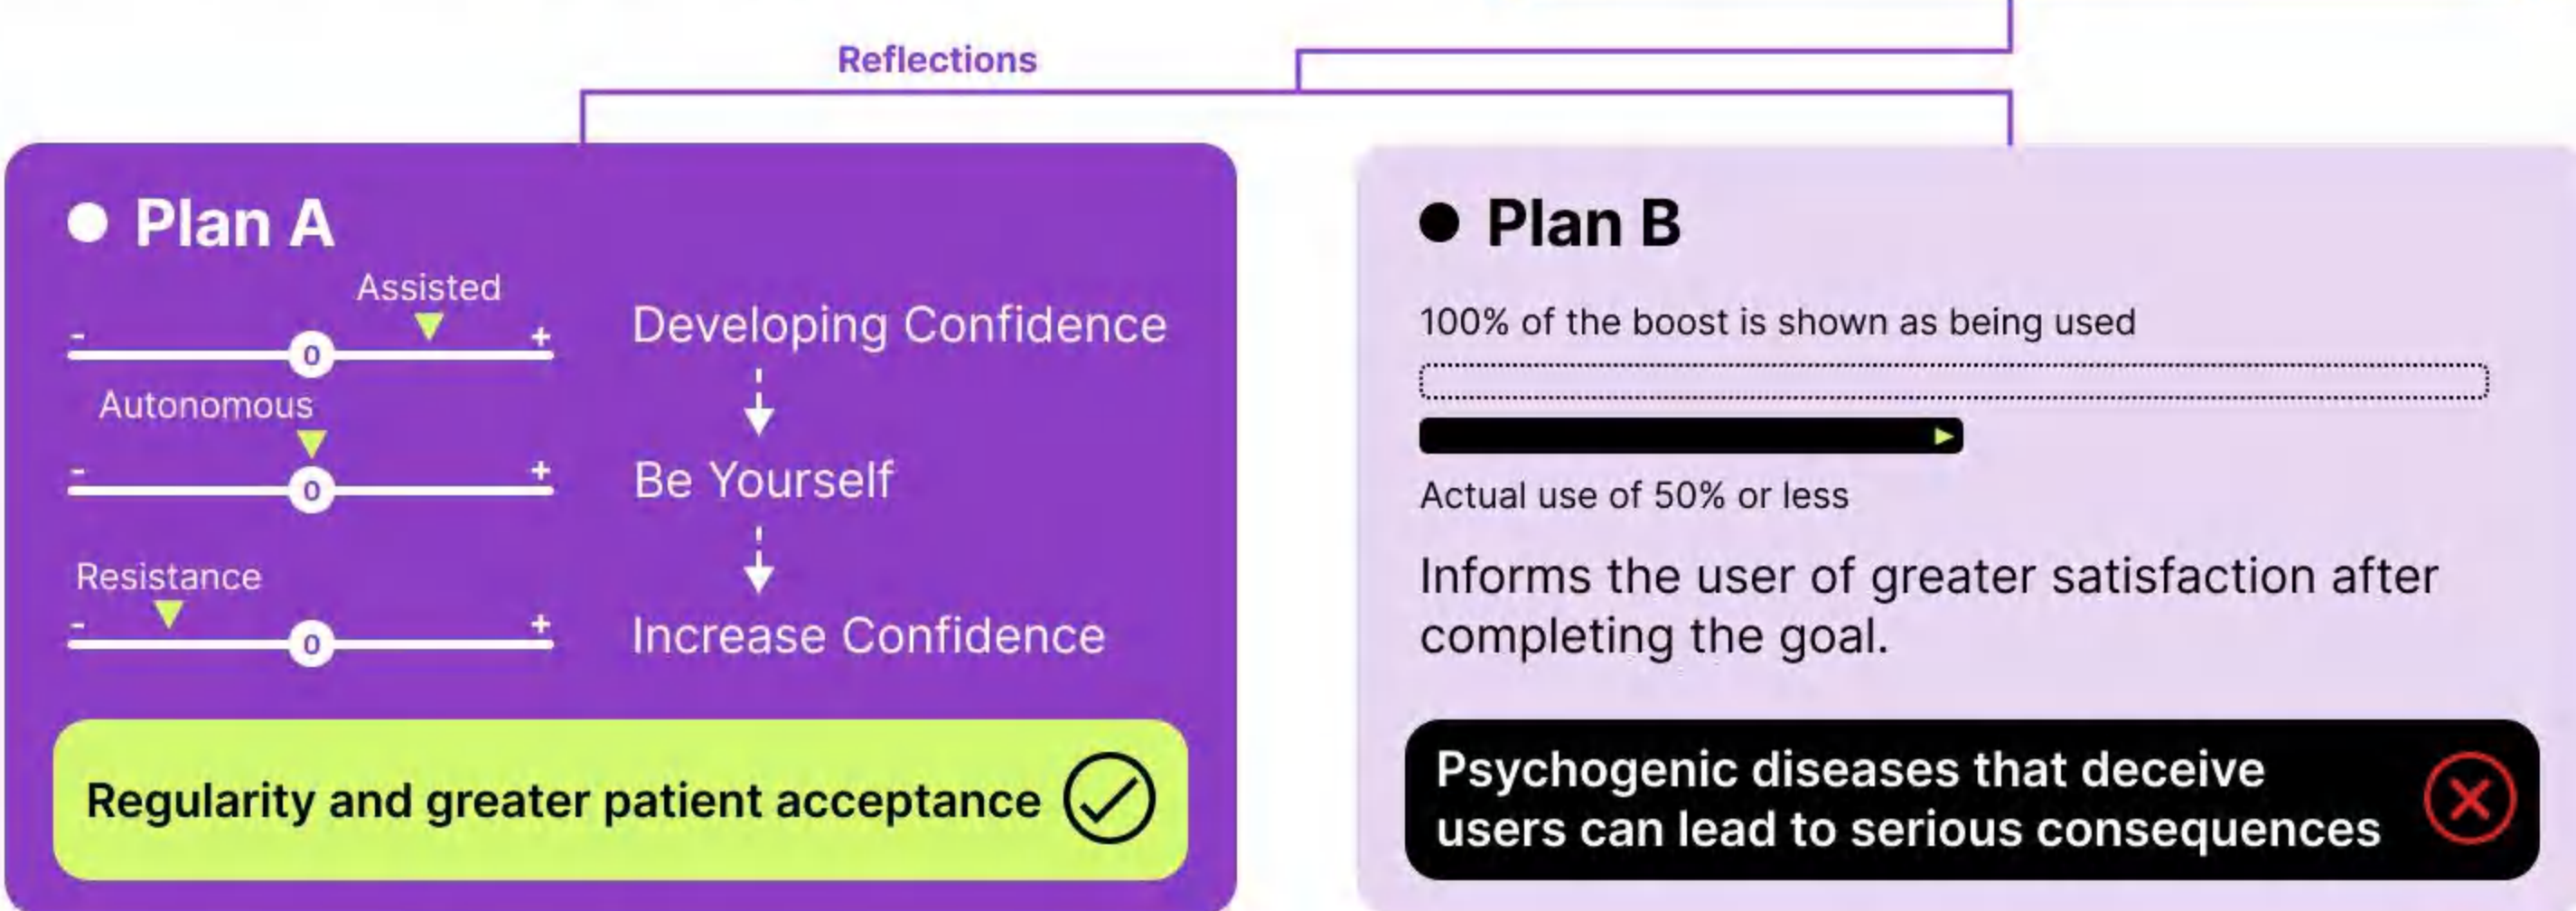

Programme planning

'Many studies have highlighted the challenges of developing standardised treatments for functional movement disorders and the need for individualised treatments tailored to the patient's clinical symptoms.'

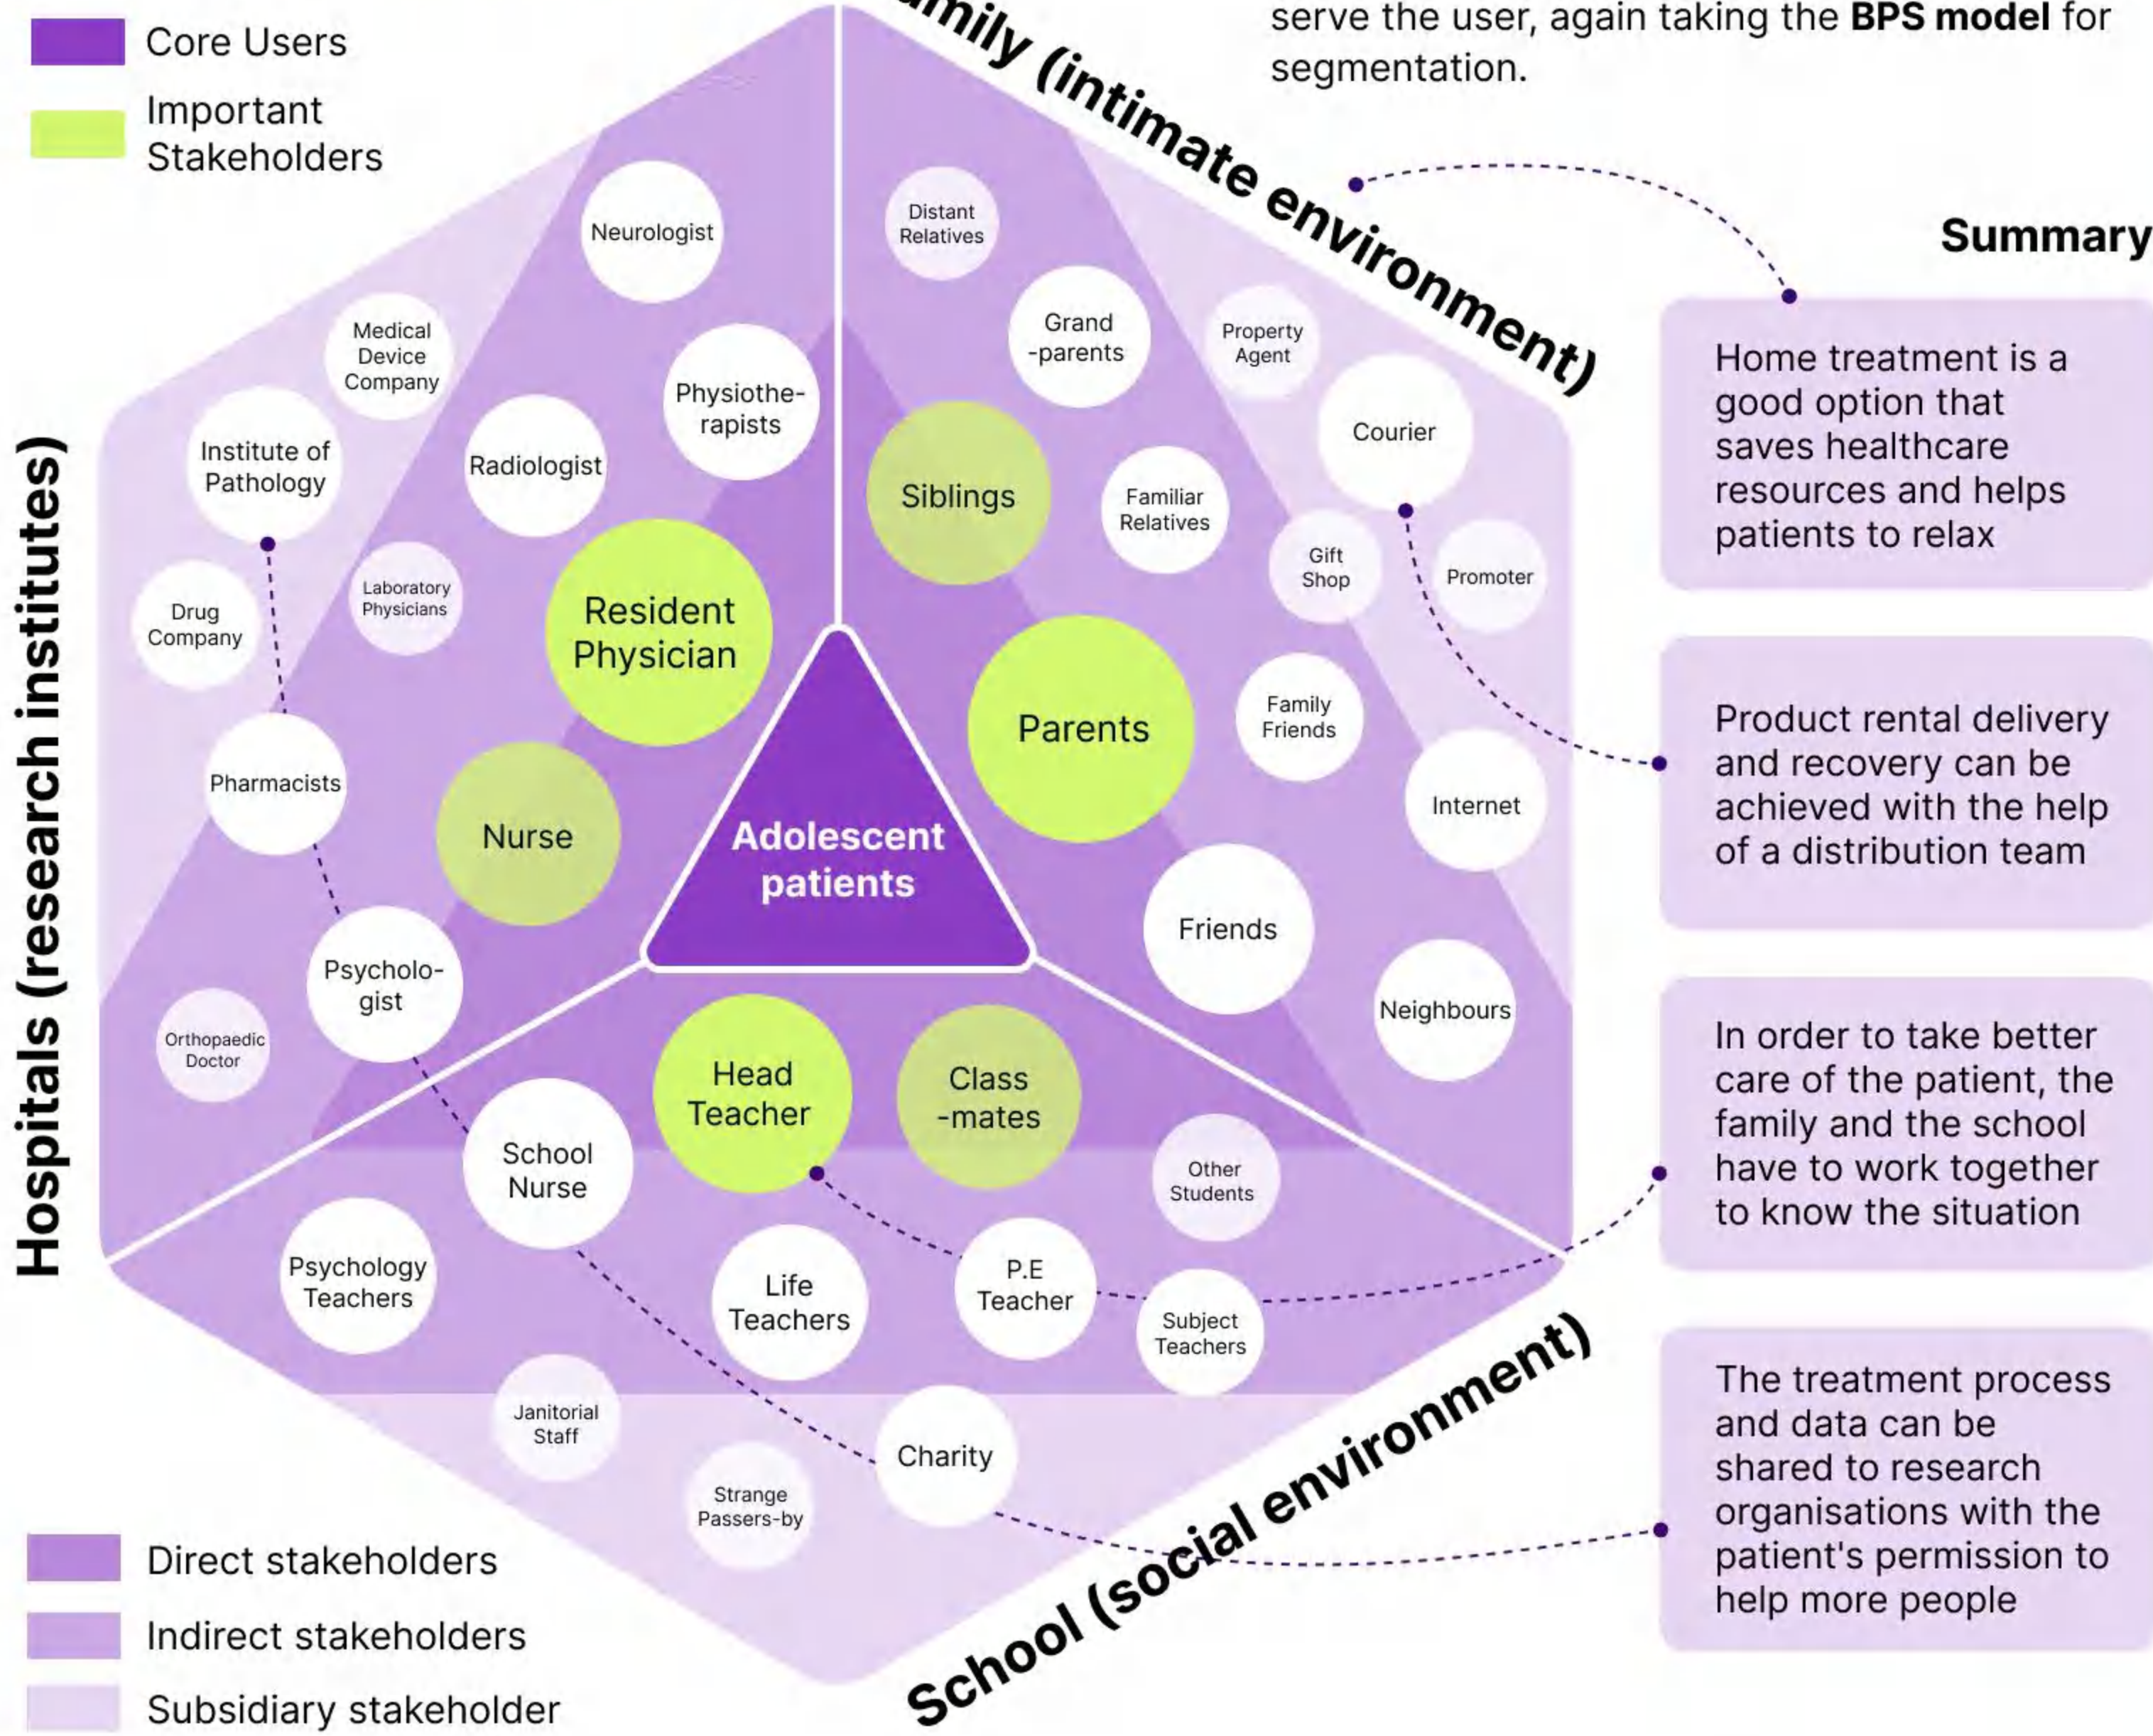

Customised and exclusive plans, personalised and timely assistive devices that allow both doctor and patient to share their statuses

'Physiotherapy and biofeedback focusing on progressive exercise training is helpful for most patients'

Therapeutic devices with progressive logic that can be micro-controlled

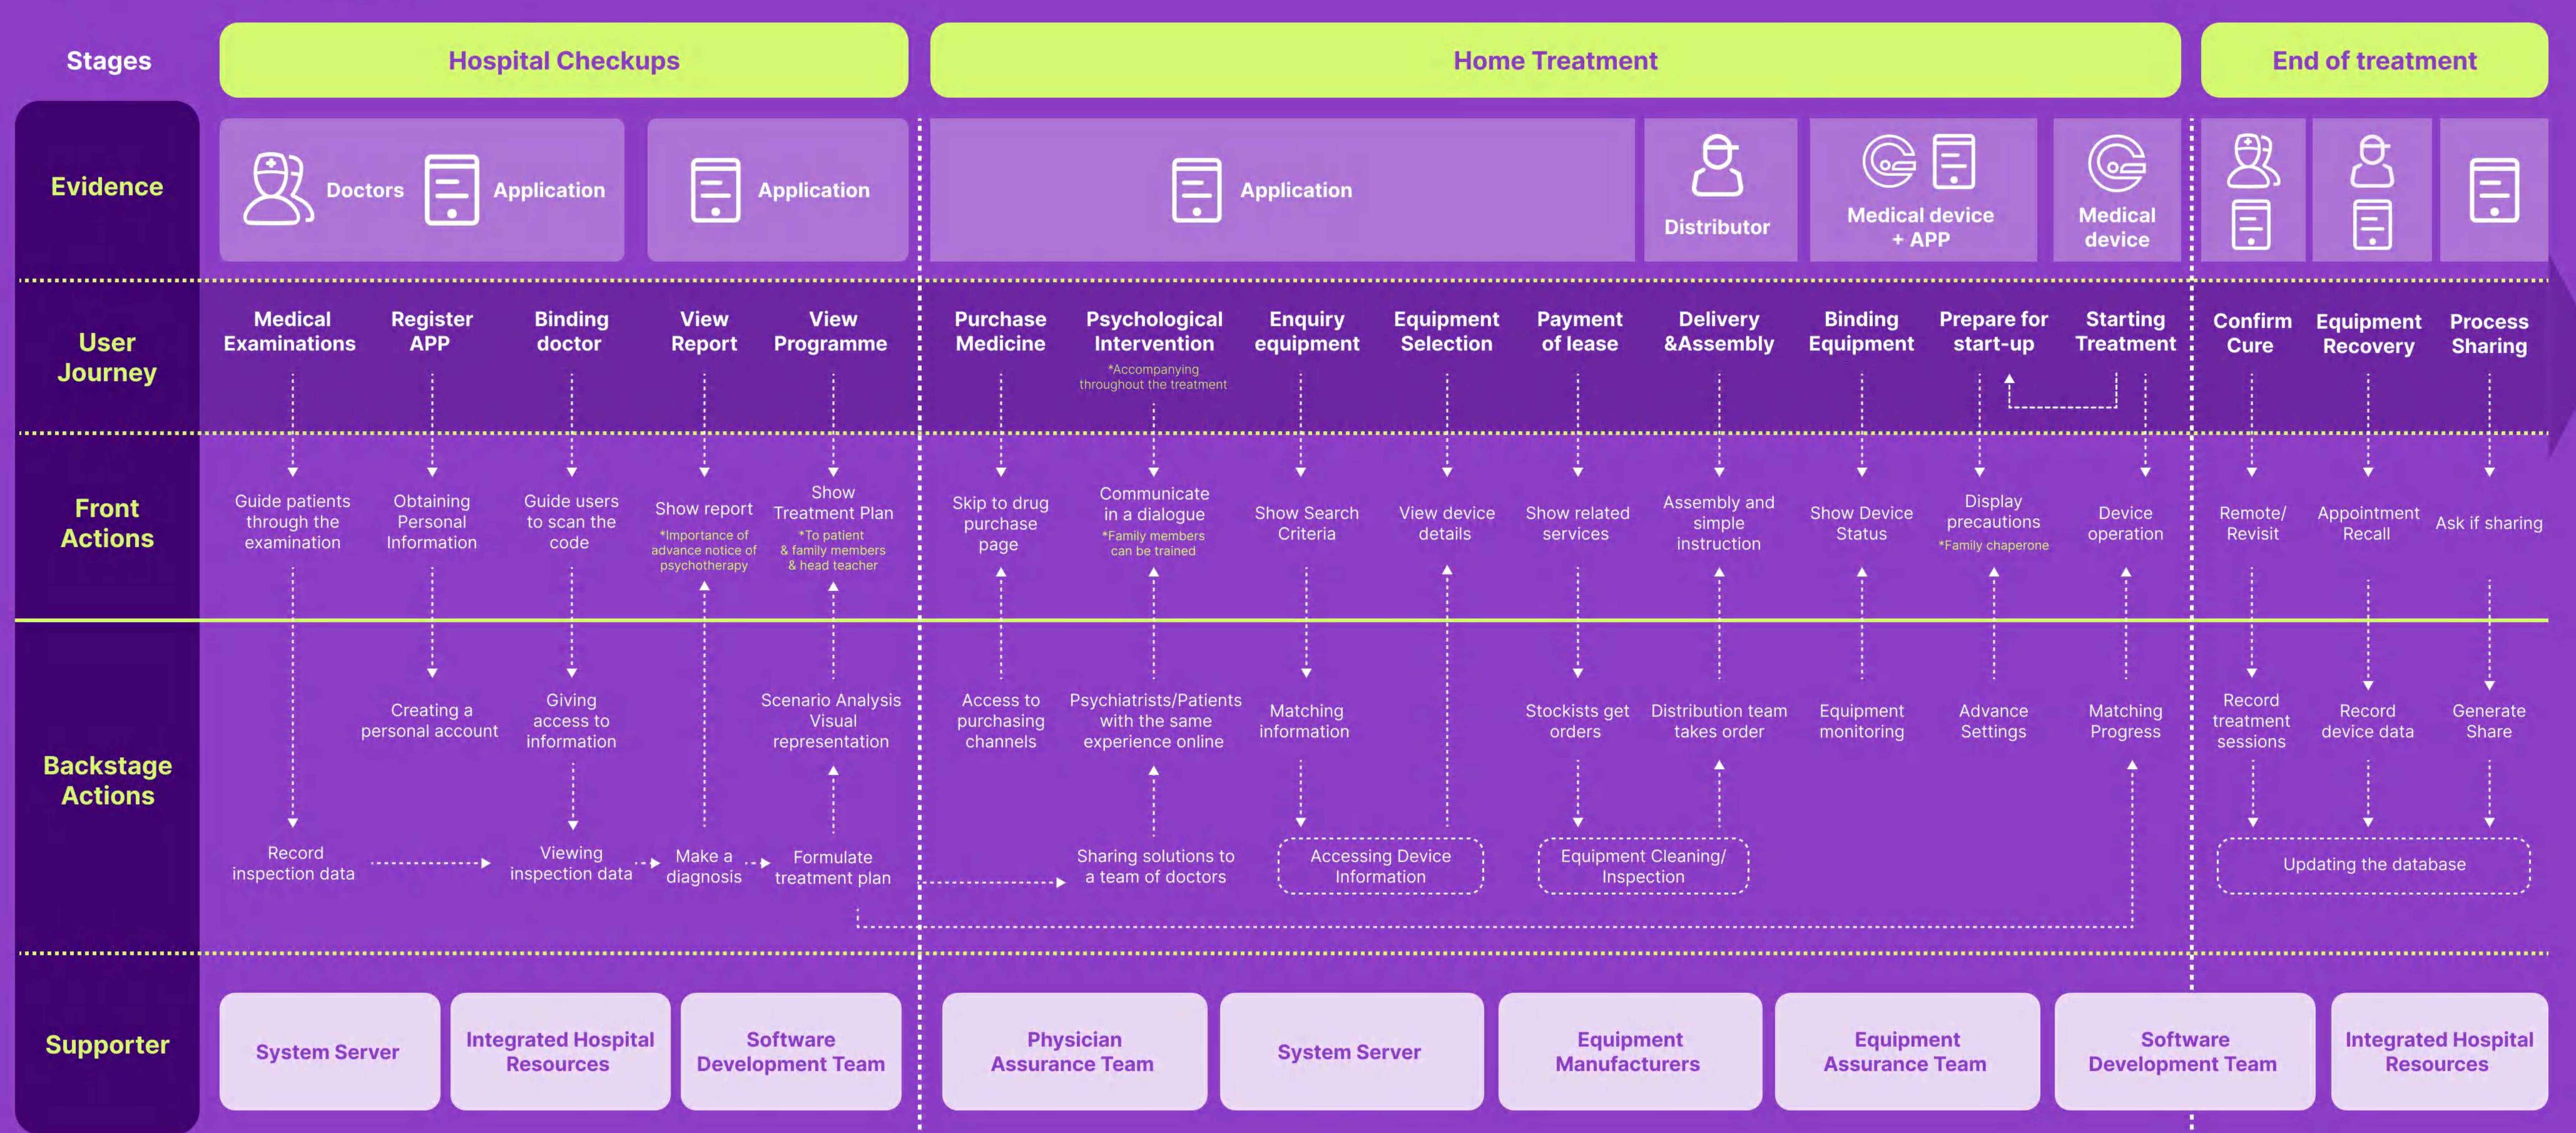

Stakeholders

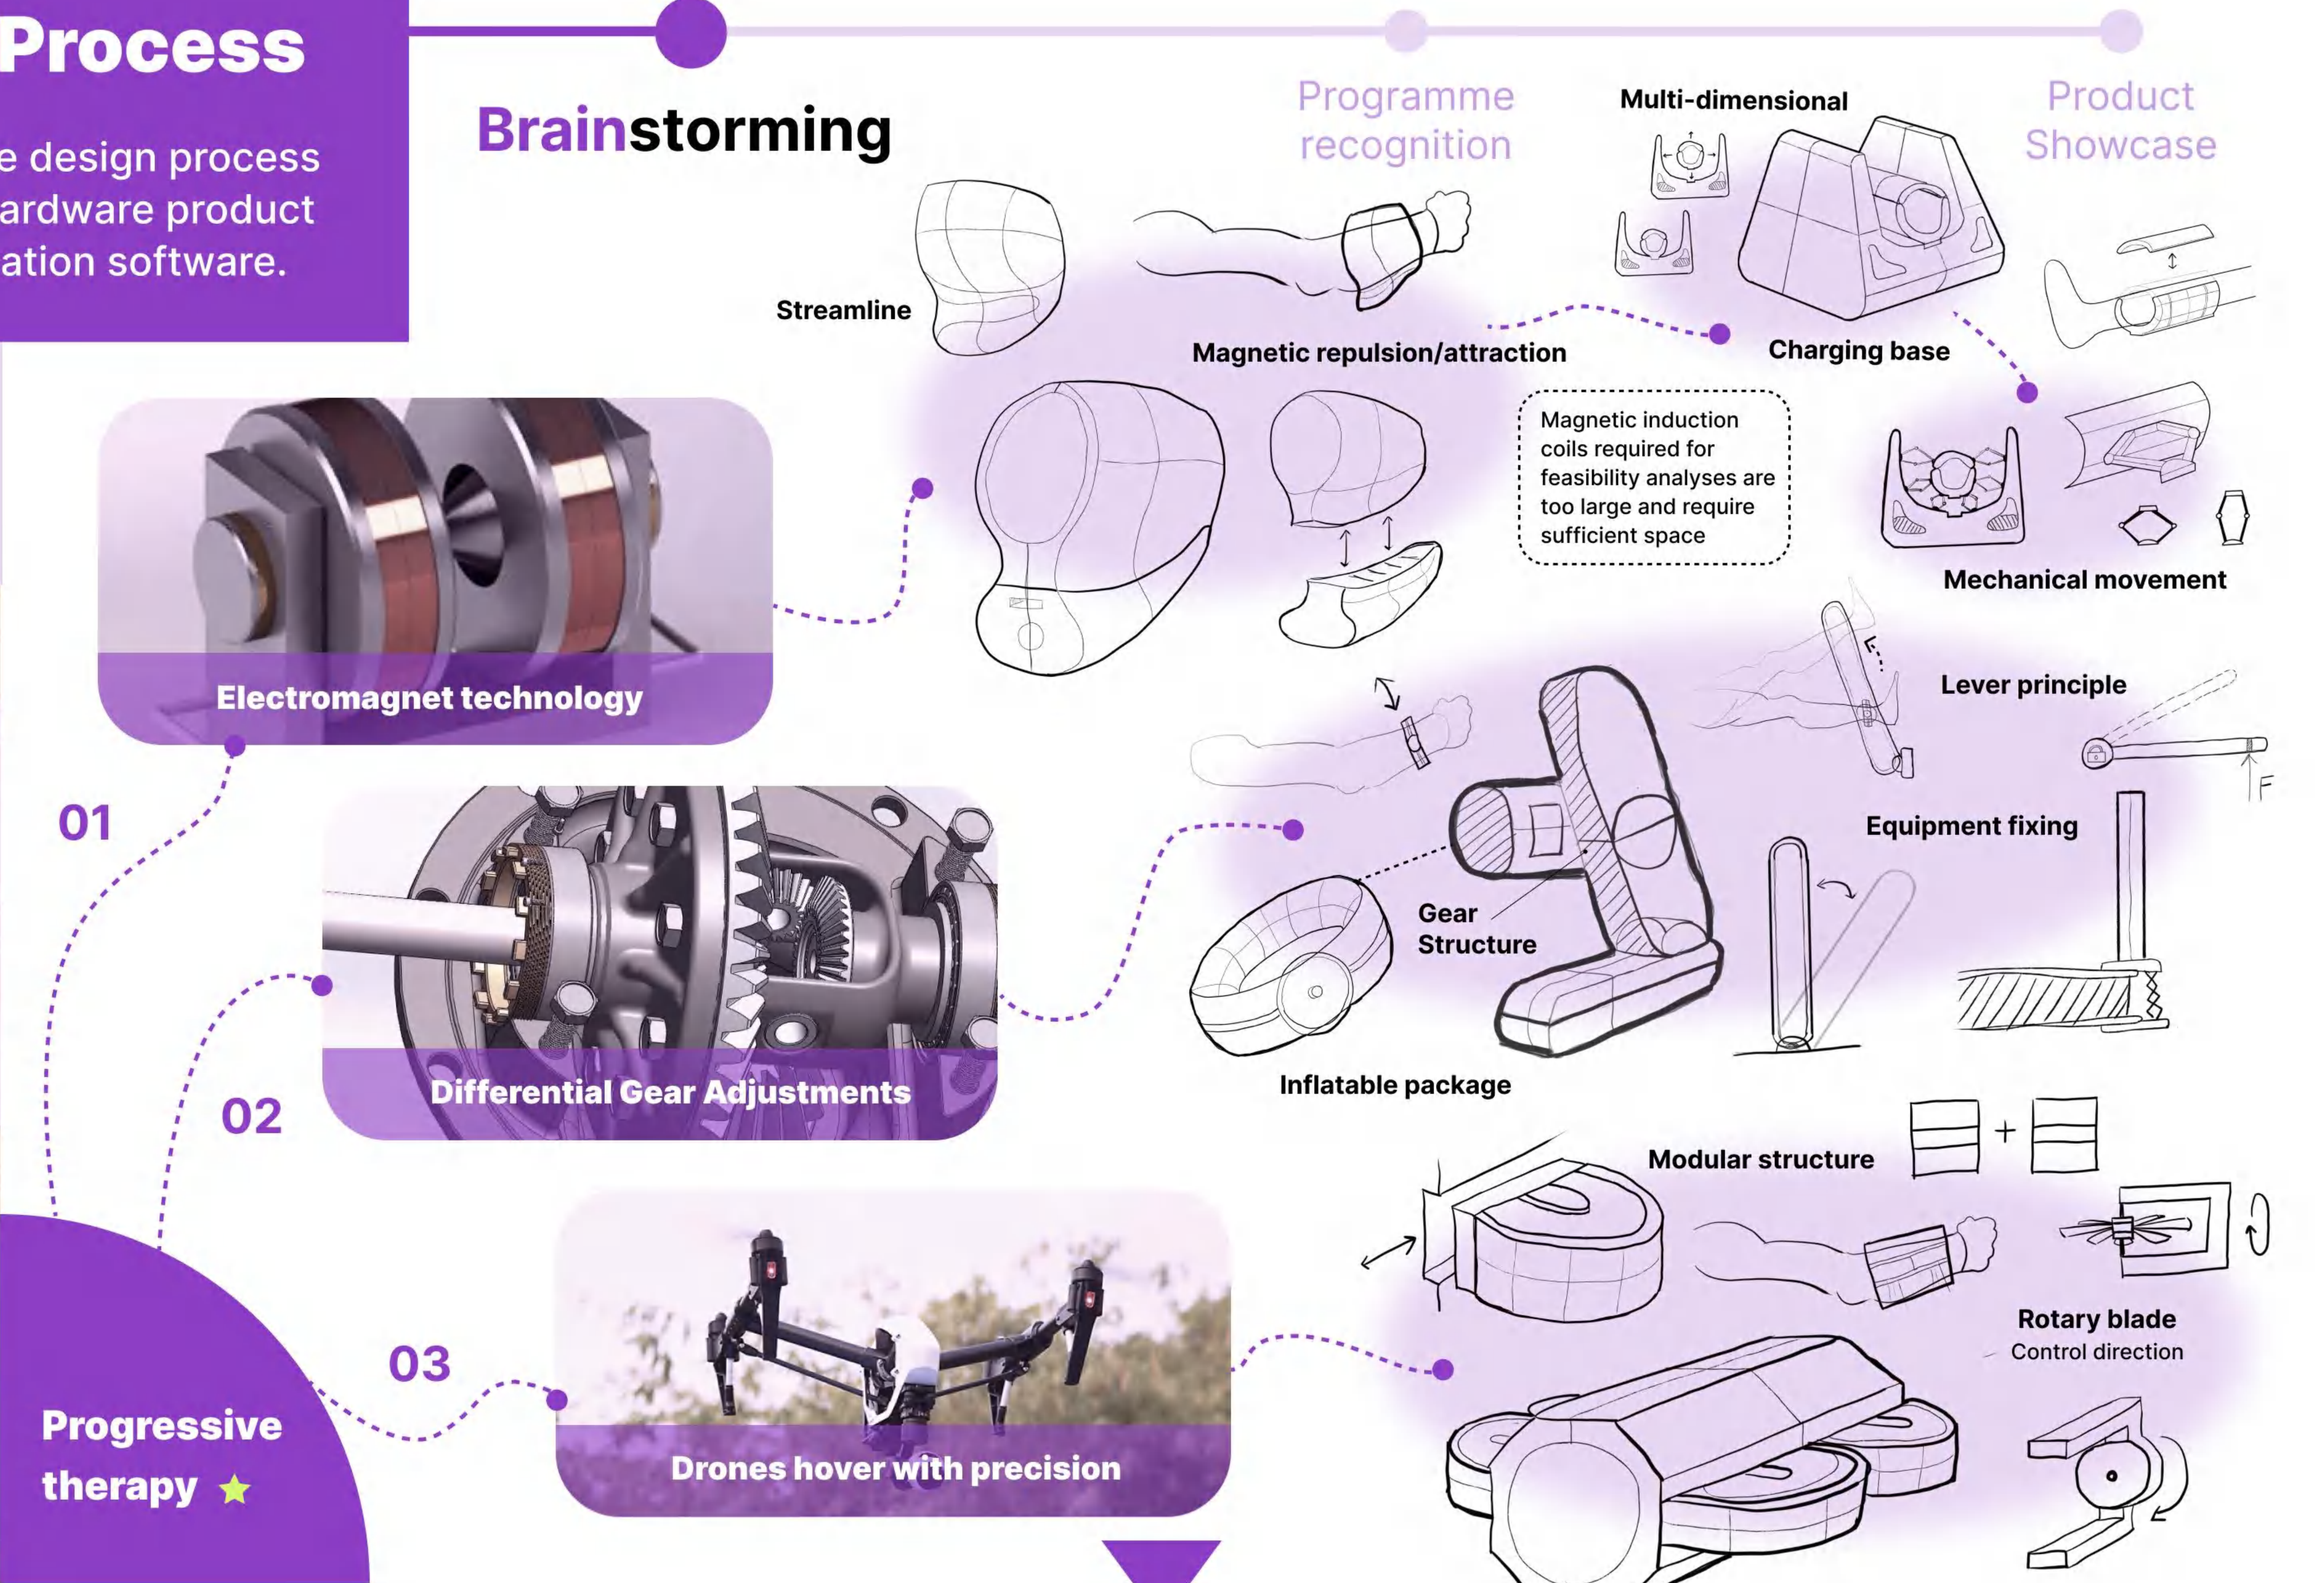

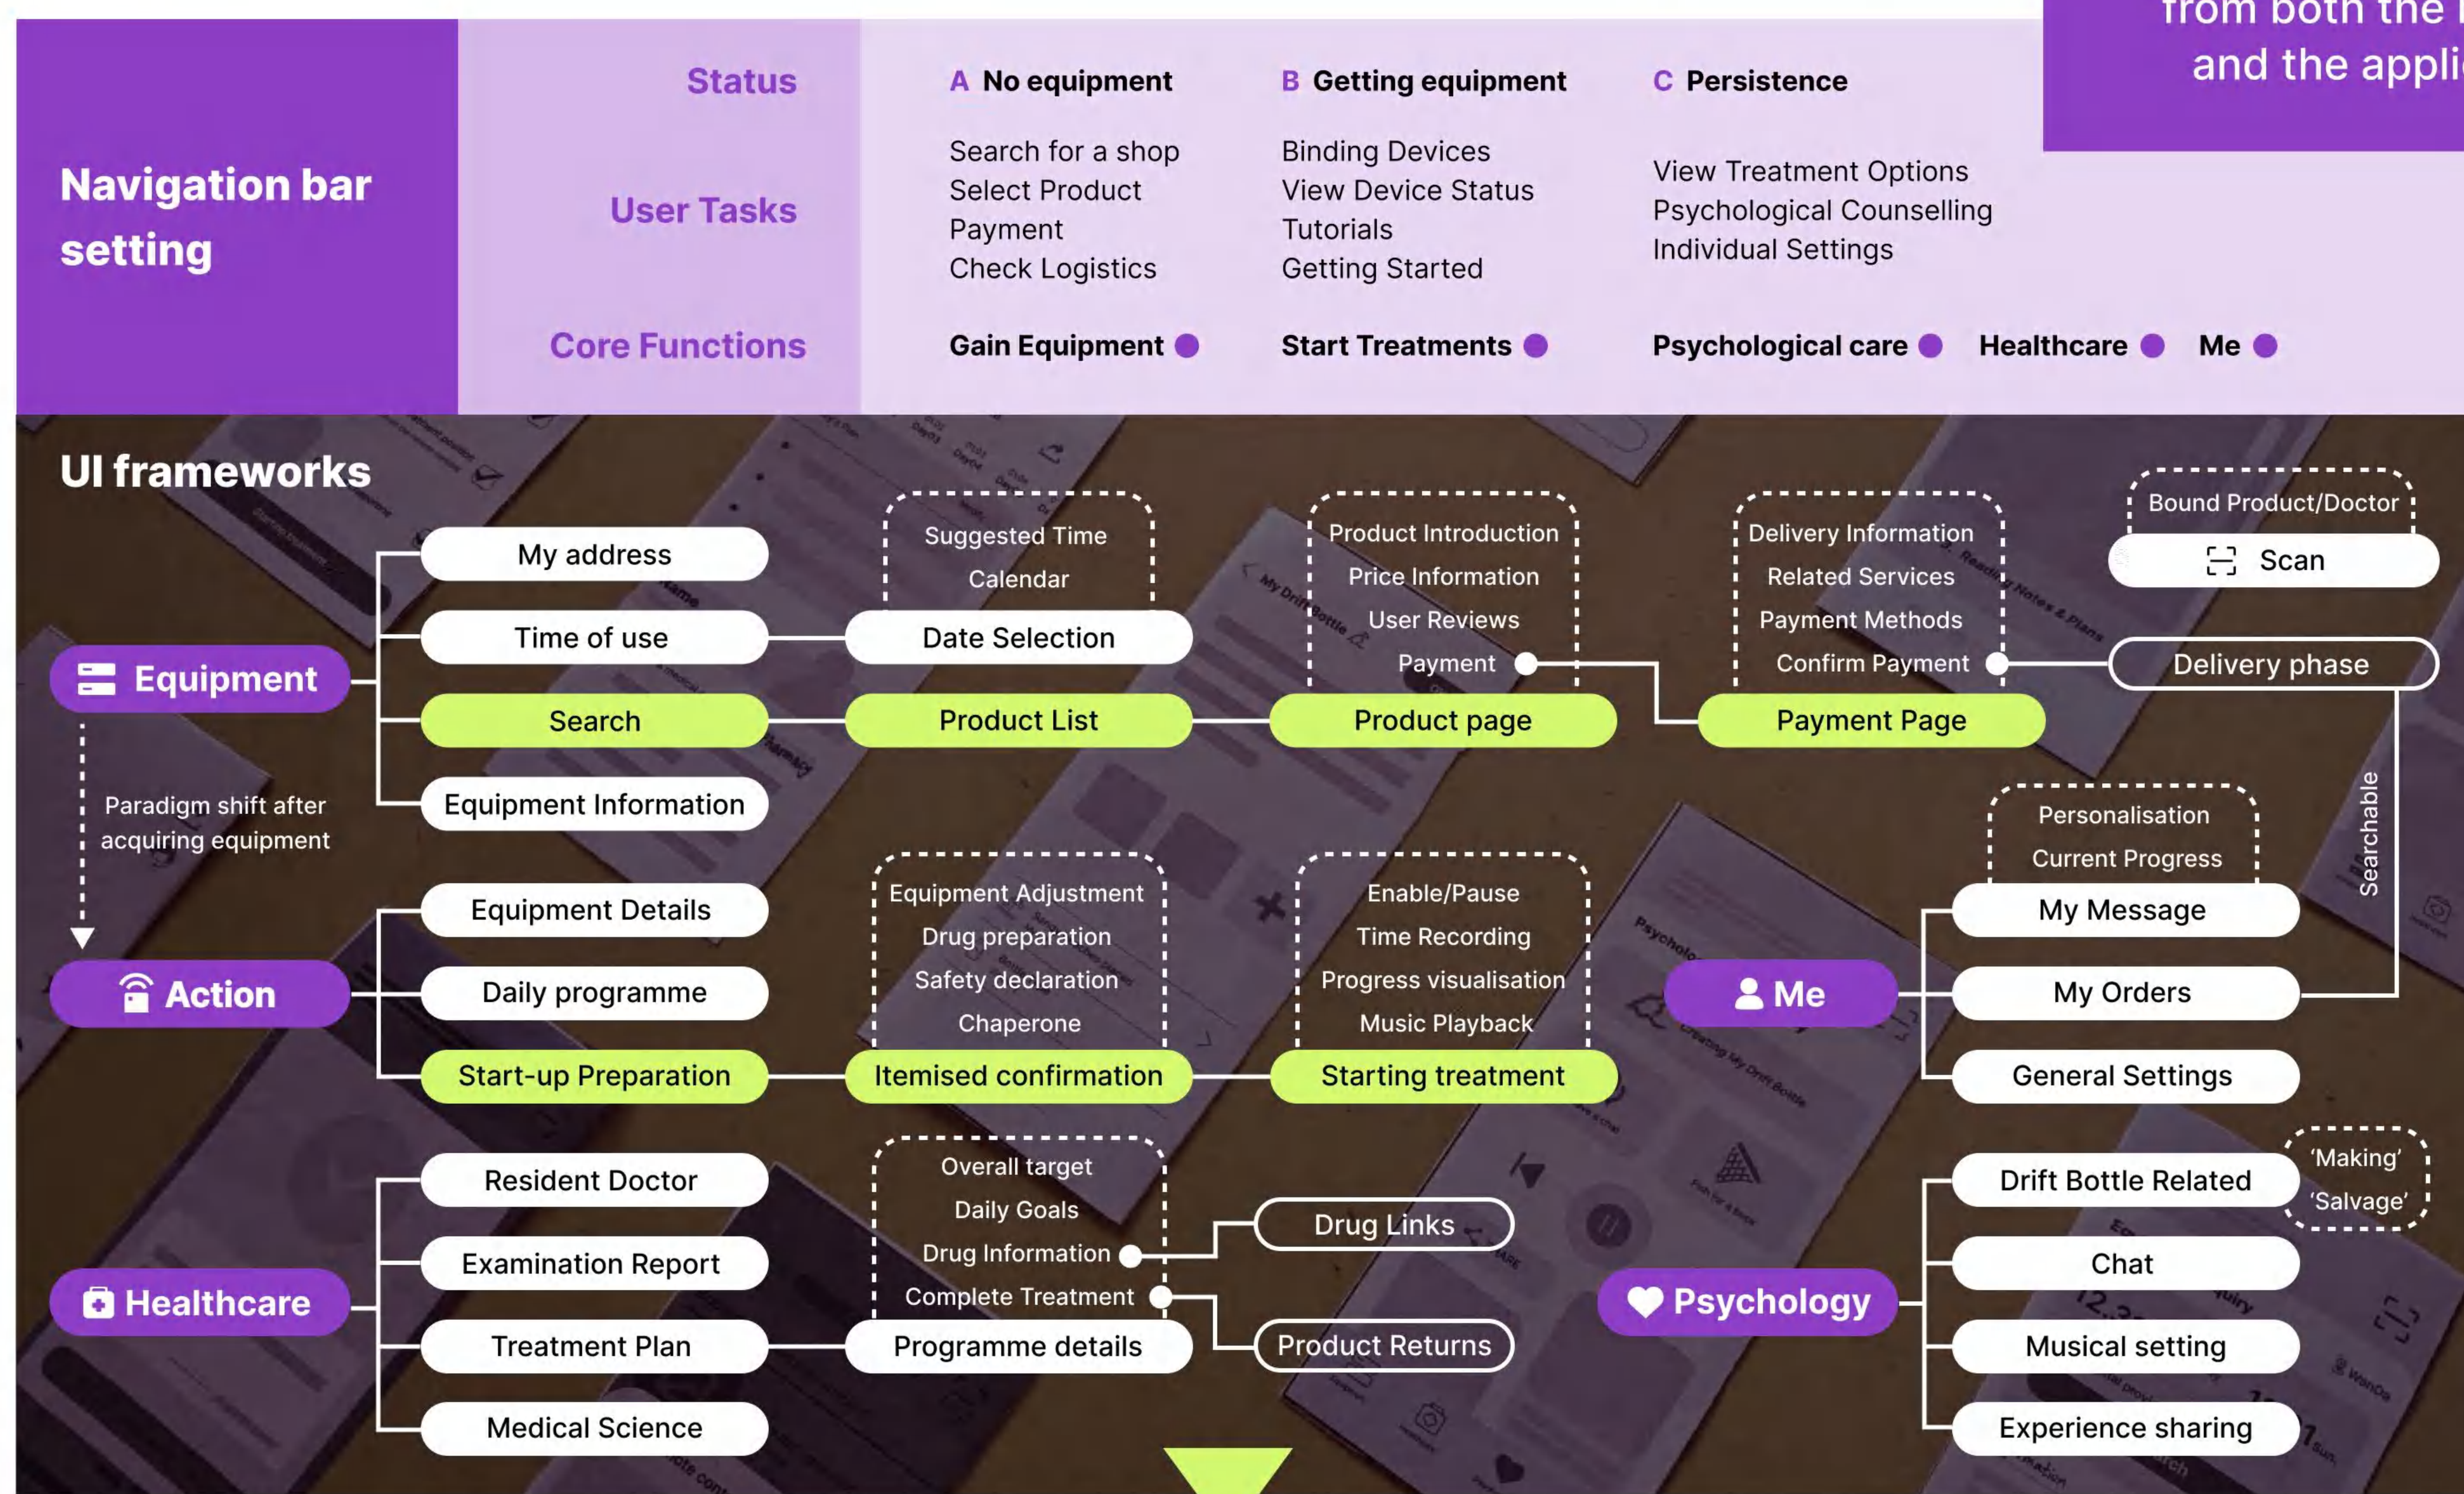

Definition

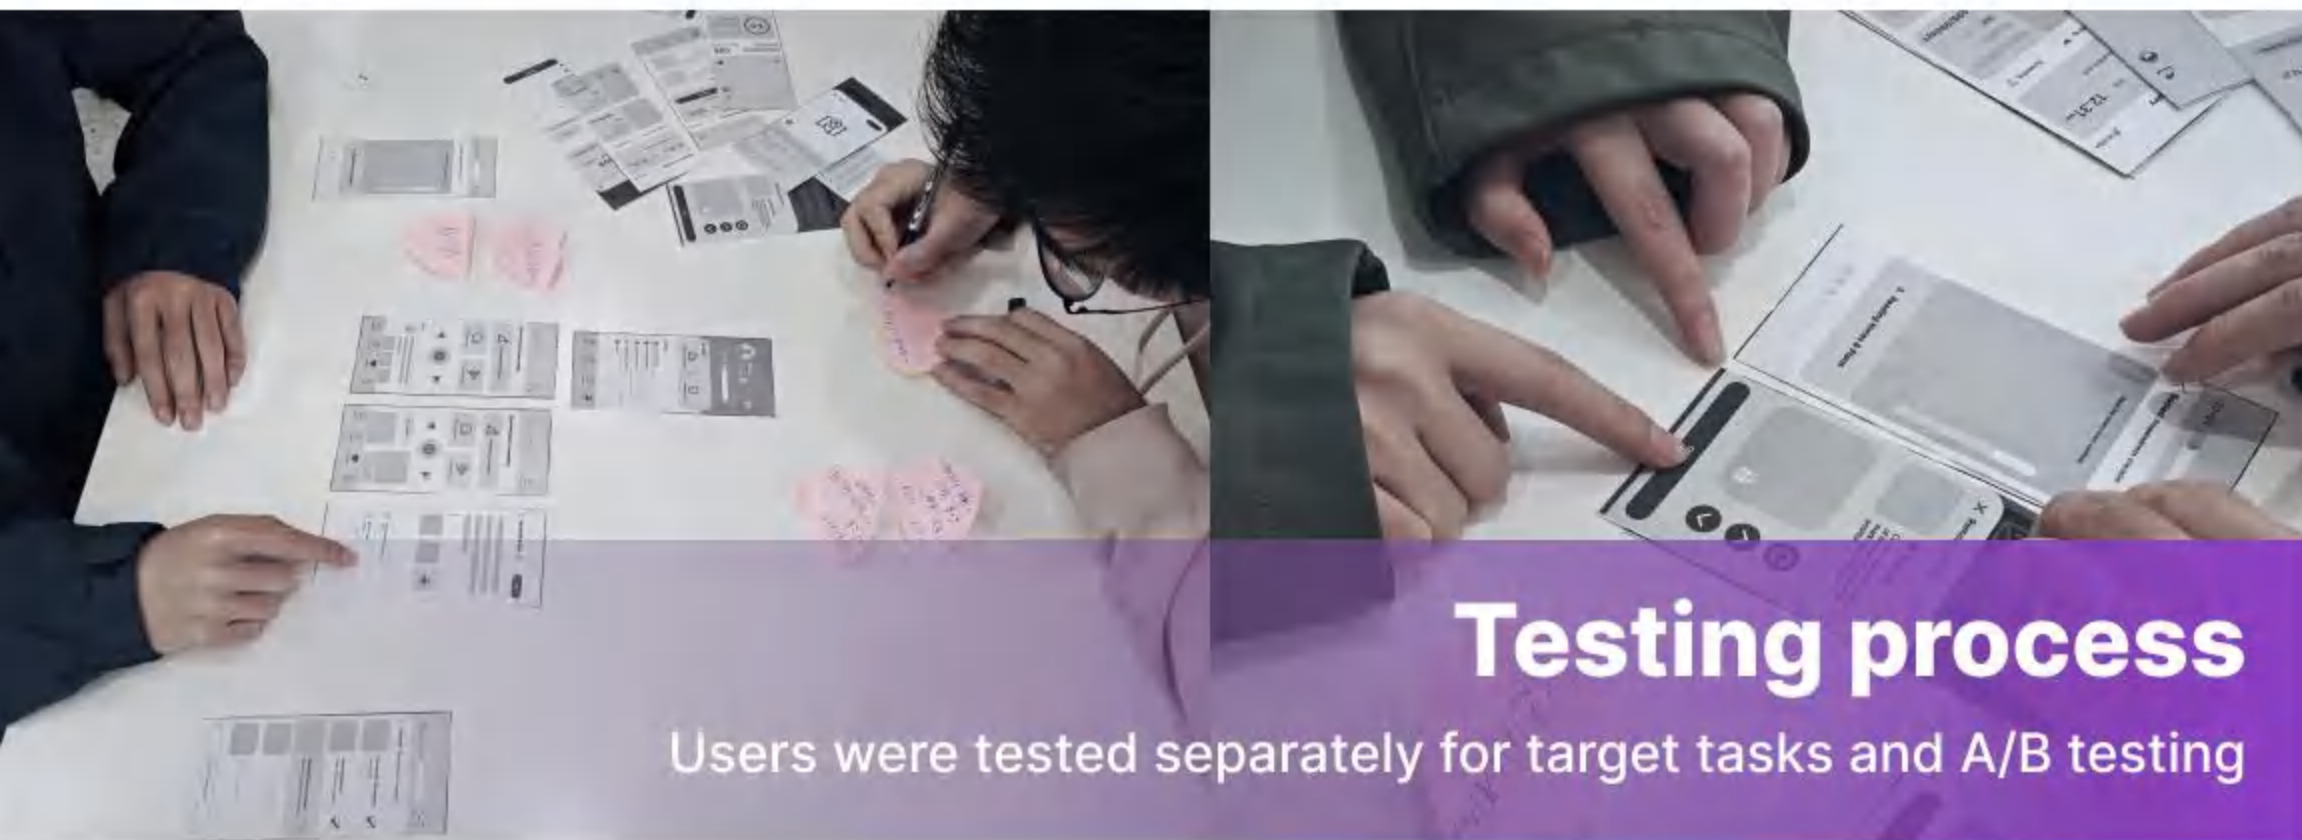

Overview	Products	Scenario	Hospitals
	Micro-control hand and foot assistive mobility devices		Pre-programming and preparation
	Application	Reason	Home

Low-cost accommodation for university students

Economically Sustainable Design

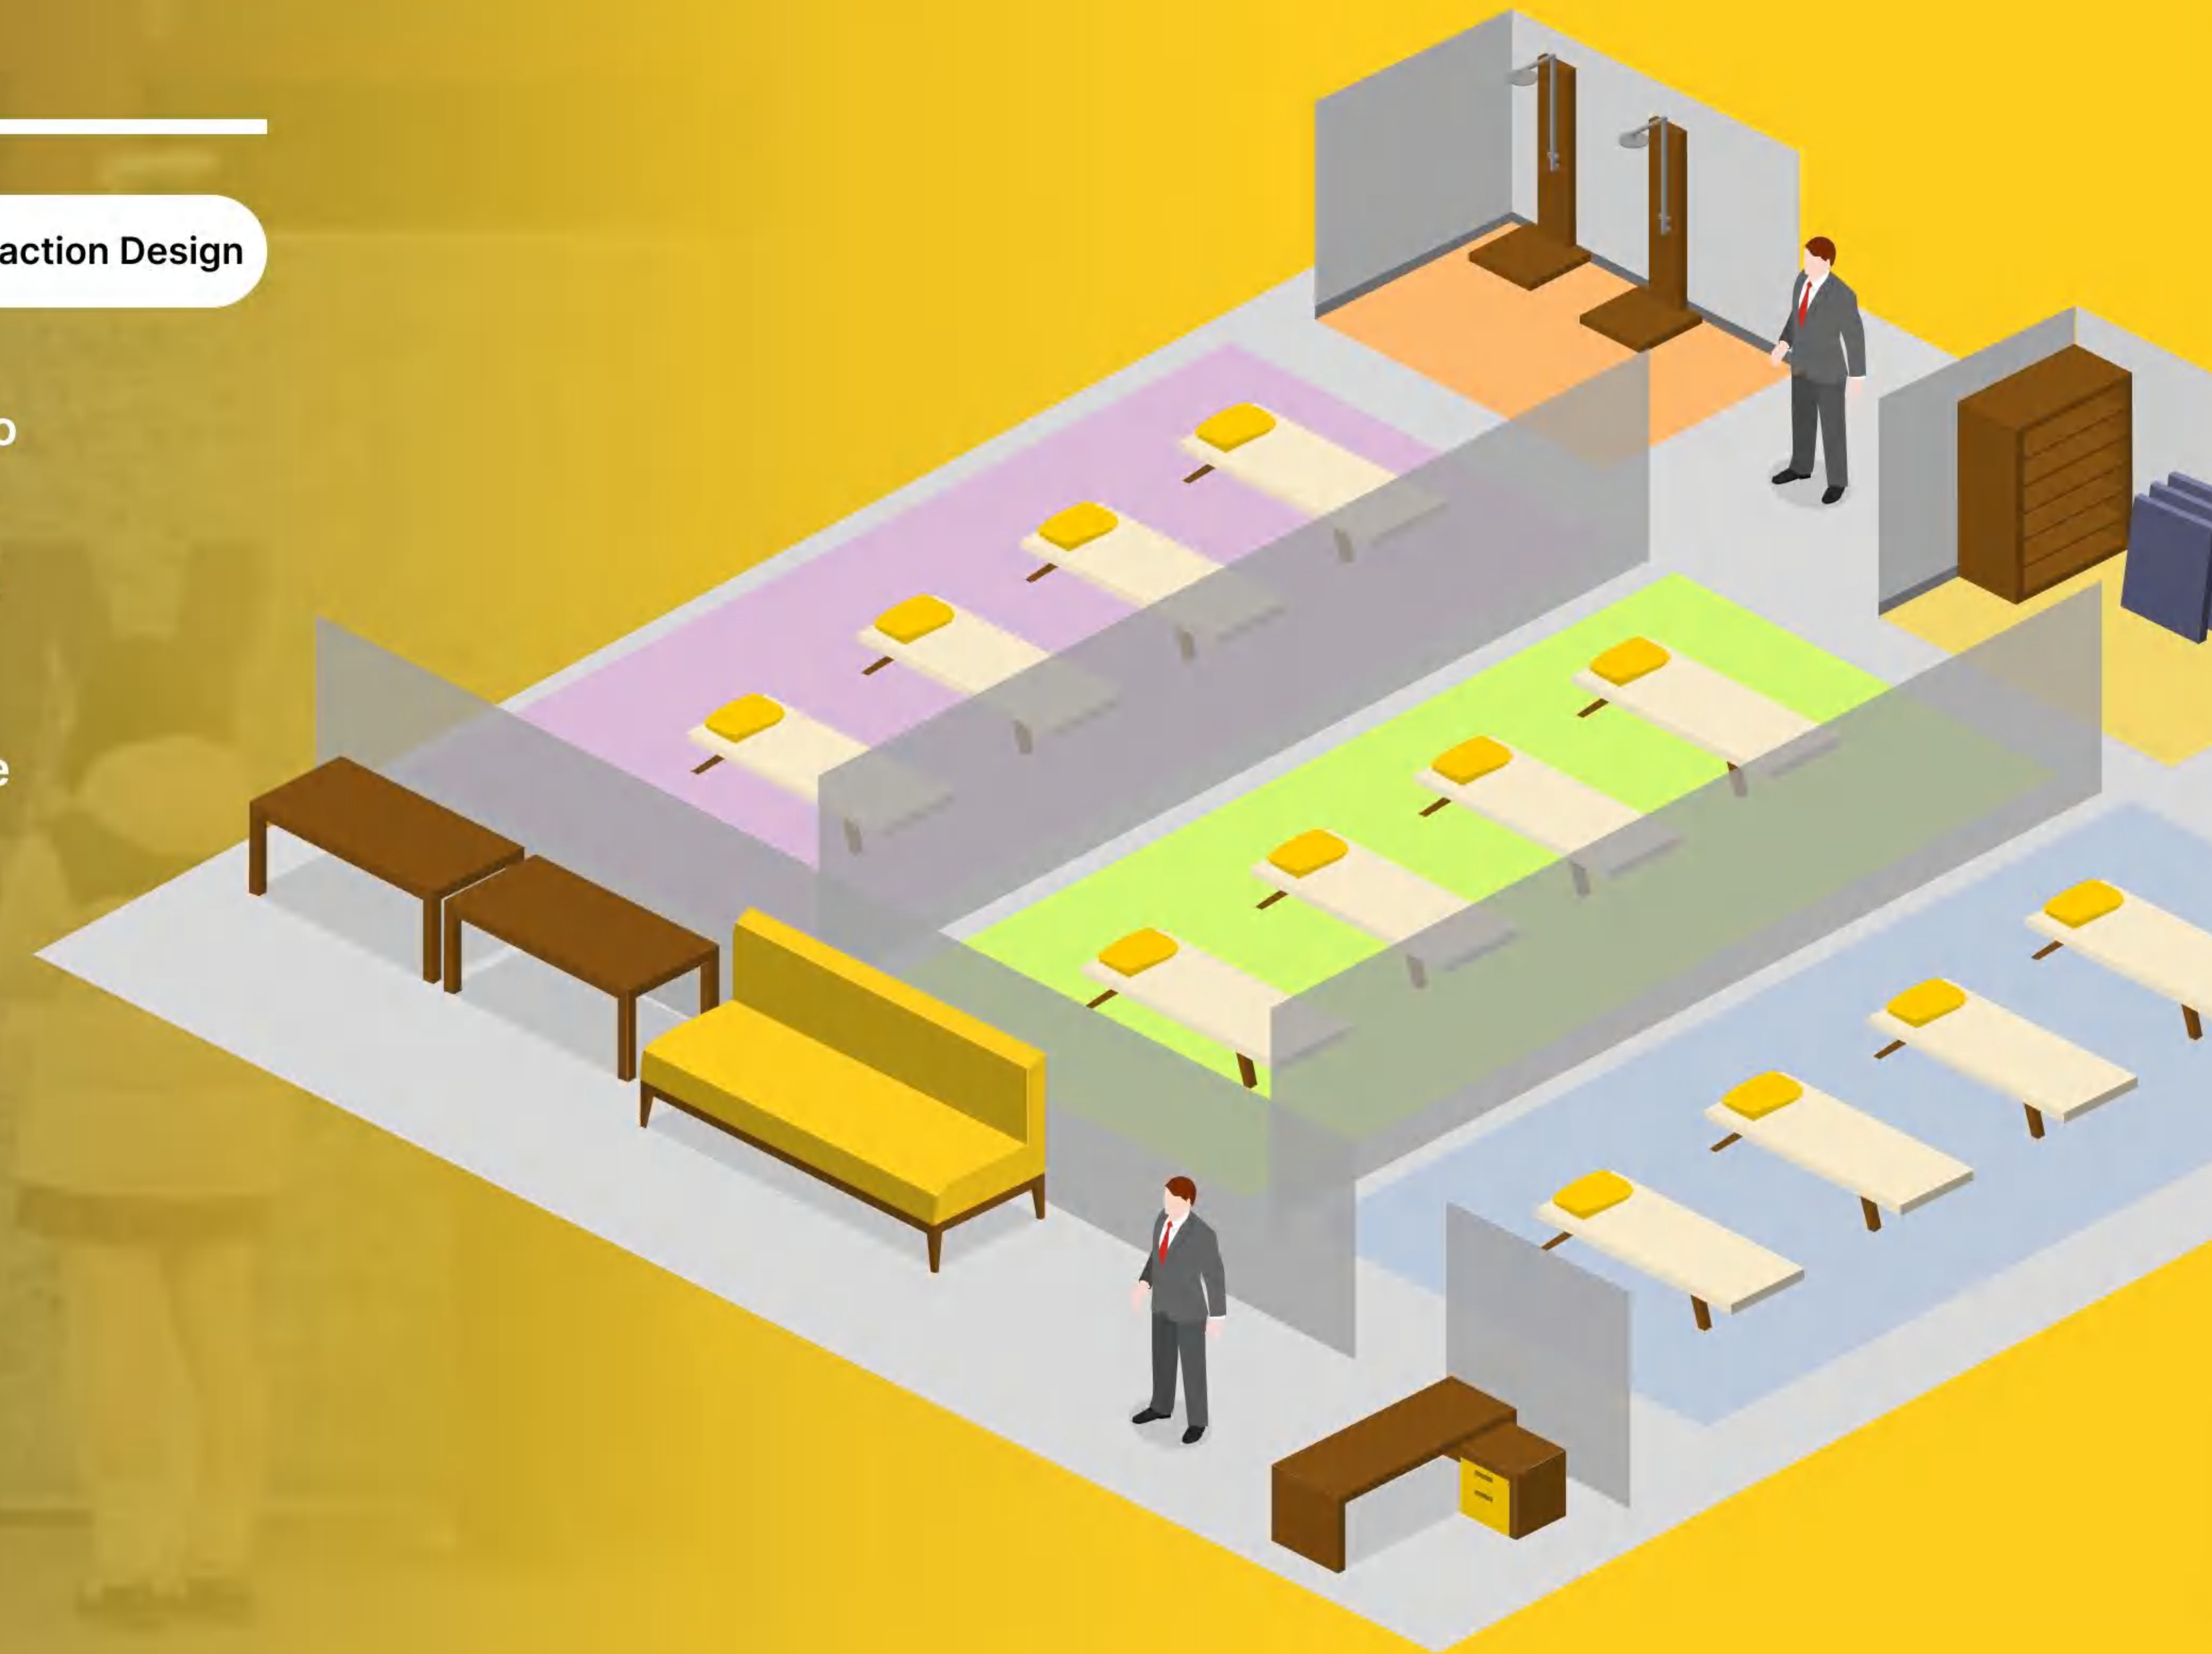

Service Design

User Research

Interaction Design

News of college students' night cycling tours in Kaifeng inspired me to study this travel group. I identified accommodation costs as their key challenge and and, considering the post-pandemic context, designed a government-led space renovation and reutilization plan.

Through a research process of interviews, surveys, and site visits, the cultural center was ultimately chosen as the setting for the solution. The plan was refined through product design, app development, and space planning to ease operational pressures, with the final solution presented as a service programme.

Inspiration

It started with a few **university students** cycling to Kaifeng to eat **steamed dumpling**, which in turn triggered emulation.

In autumn 2024, a night cycling boom from Zhengzhou to Kaifeng, Henan Province, China, emerged. The **daily peak participation exceeded 100,000**, boosting **Kaifeng's tourist numbers by 30%** and stimulating the local consumer market.

University students first reported Zibo affordable prices

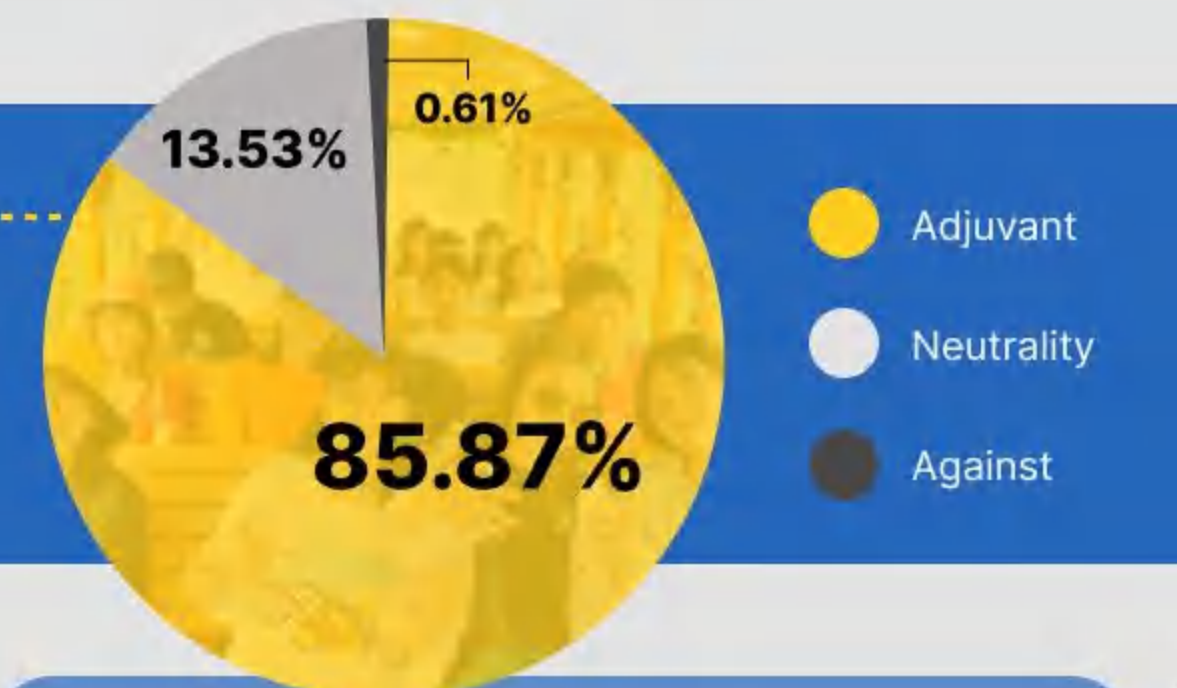

University Students Shoot Vlog Introducing Tianshui

University students' social media agreement to climb Mt Wugong

Looking back at the cases of travel explosion in recent years, **university student** have almost always been **the earliest initiators and responders**

University students - a new force in the tourism market

After three years of turmoil during the epidemic era, more and more university students are eager to travel to experience a sense of freedom and enjoy different landscapes.

Short period
85.96%

Choose to go away for **two days** on the weekend without delaying Monday's classes

Short distance
78.54%

Choose a place that is accessible by transport **within three hours** of the school perimeter.

Save money
82.57%

Respondents indicated that they would like to keep the overall cost within **500 RMB**

"Accommodation is not a core need but it is the most expensive!"

Through observation and communication, I realised that everyone's **biggest spend is on accommodation**, and this reflects a paradox

Bringing prosperity to the tourist market

Attract more university students

Reduced accommodation prices

Background

On the other hand, the formation of the tourism explosion can not be separated from the strong support and investment of the government

Politic

Promoting the opening of government premises for the convenience of the population.

Economics

Governments at all levels push tourism to stimulate consumption.

Social

In the post-epidemic era, people are becoming more sensible in their spending and investing.

Technology

Innovations in distribution methods have led to a more developed and convenient logistics industry.

How to reduce the cost of living for university students through a form of government-led spatial adaptation?

Research

Interviews with student travellers summarized living space considerations, and prioritise the different dimensions through questionnaires

Qualitative research

Basic tools

(table, chairs, kettle, etc.)

Bathing facilities

Washroom

Power supply capacity

(proximity/number of power sources)

Security and safety check

Privacy

(individual separate sheltered space)

Air conditioning

(temperature and humidity)

Price

Emergency service

(front desk)

Tidiness

Freedom

(personal space size, etc.)

WIFI service

Novelty

(special location/cultural atmosphere, etc.)

13 Dimensions

The order of the list is randomised

Quantitative research

01 - Get more basic information

Can you tell me your current identity? Age? Gender?

02 - Access to travel-related information

Frequency of trips
(Boundary of one semester)

☐ 1-2 times ☐ 3-5 times ☐ >5 times

Monthly disposable income (Unit: CNY)
(For students who are working, this is after board and lodging)

☐ <1000 ☐ 1000-3000 ☐ 3000-5000 ☒ >5000

03 - Setting up error-proof issues

Maths calculation questions

(The correct result for 36 + 47 is ?)

Excluded data - Crude exclusion of unreliable samples

Fillers who don't have the patience to calculate this topic may not be serious about the ordering of dimensions.

Samples with too much disposable income do not fit the scenarios explored in this theme.

04 - Prioritise the dimensions

01 Randomise the 13 dimensions

02 Ask users to rank them according to their level of concern

Scoring rules

The weights are determined by the position in which the options are ranked. A total of 13 options are ranked, the first position is given a weight of 13, the second position is given a weight of 12, and so on.

*Average composite score = (Σ frequency × weight) / number of times this question was completed

05 - Learn More

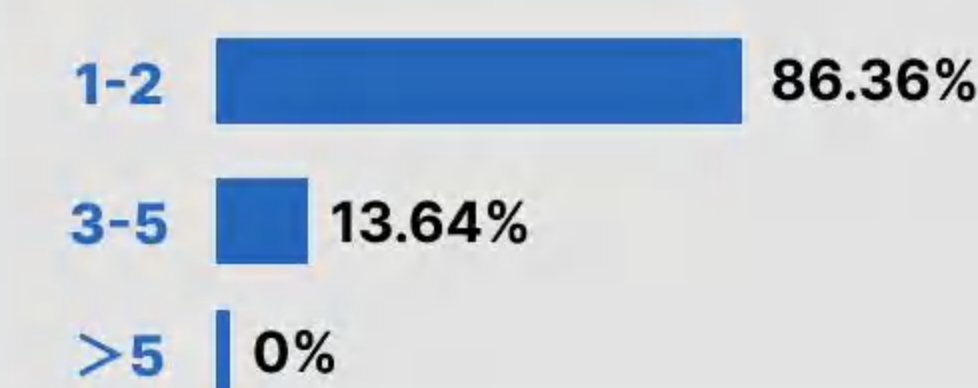

What other factors would you consider?

Results statistics

*Only important data are listed

Frequency of trips

Boundary of one semester

Combined with the fact that the vast majority of respondents had disposable incomes of **less than RMB 3,000**, it is possible to predict that **lowering the price of accommodation** is also highly likely to **increase the frequency** of university student travel.

Learn More

14 respondents gave other factors, of which 6 noted that they would focus on **location**

A good location generally means a higher price

Shift in thinking

01 Getting to a good location made easy

02 Transforming spaces in good locations

Prioritisation of dimensions

Price	8.05
Security and safety check	7.73
Washroom	7.45
Tidiness	7.14
Privacy	6.50
Bathing facilities	5.18
Basic tools	5.18
...	

Take the **top five** ratings as the core dimensions, the **sixth and seventh** are not too far apart and are prioritised as **additions to the design**.

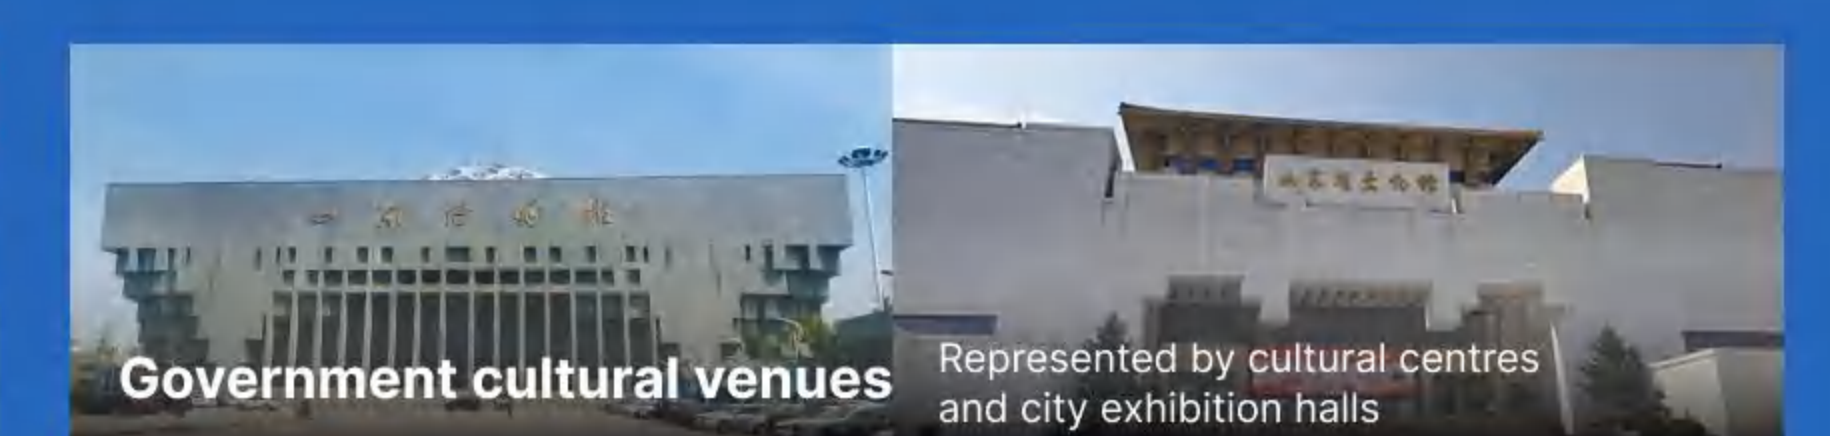

Field visit

Explore potential new government-related living space programmes

Public place - Under the direct or indirect jurisdiction of the Government

Government departments Represented by the Government, courts

Government cultural venues Represented by cultural centres and city exhibition halls

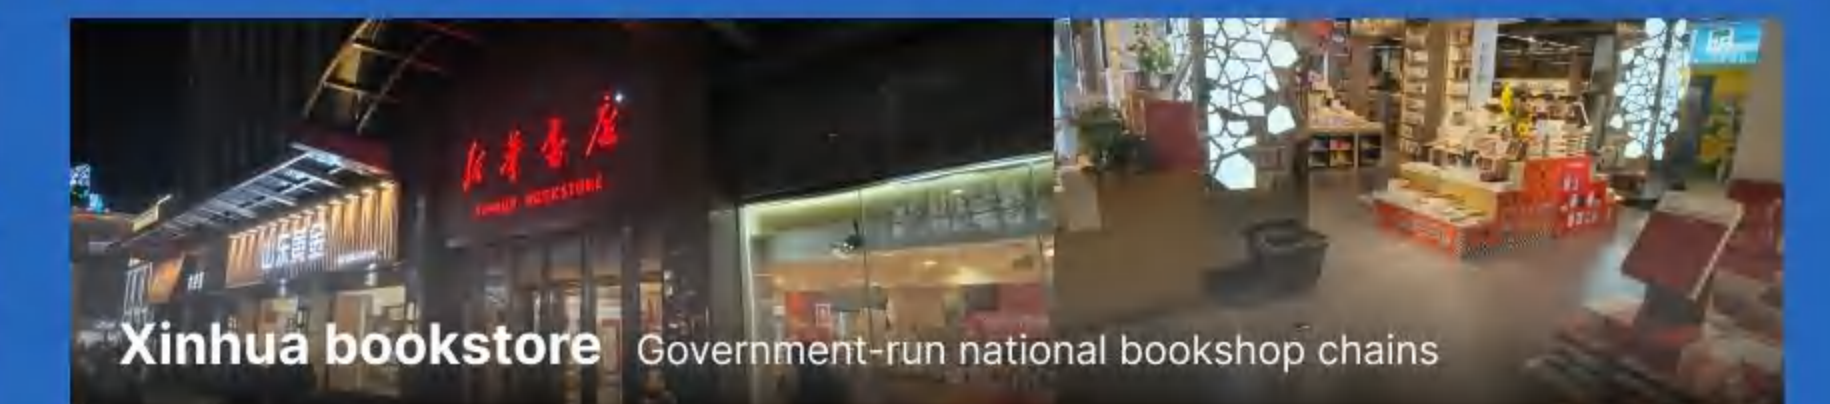

Small security installations University students can assist in participating in small incidents

City park Under the direct jurisdiction of the Government

Volunteer Post Dense but largely deserted

Xinhua bookstore Government-run national bookshop chains

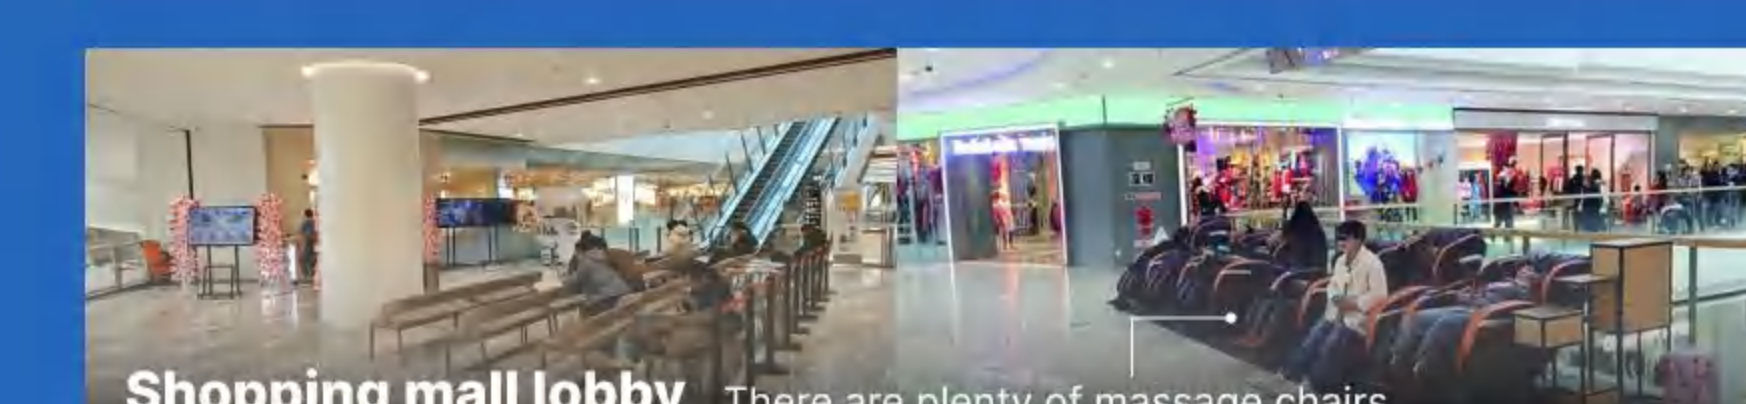

Bus stops Reuse of buses idling at night Bus door control buttons

Educational organisation Strengthening academic exchanges among university students

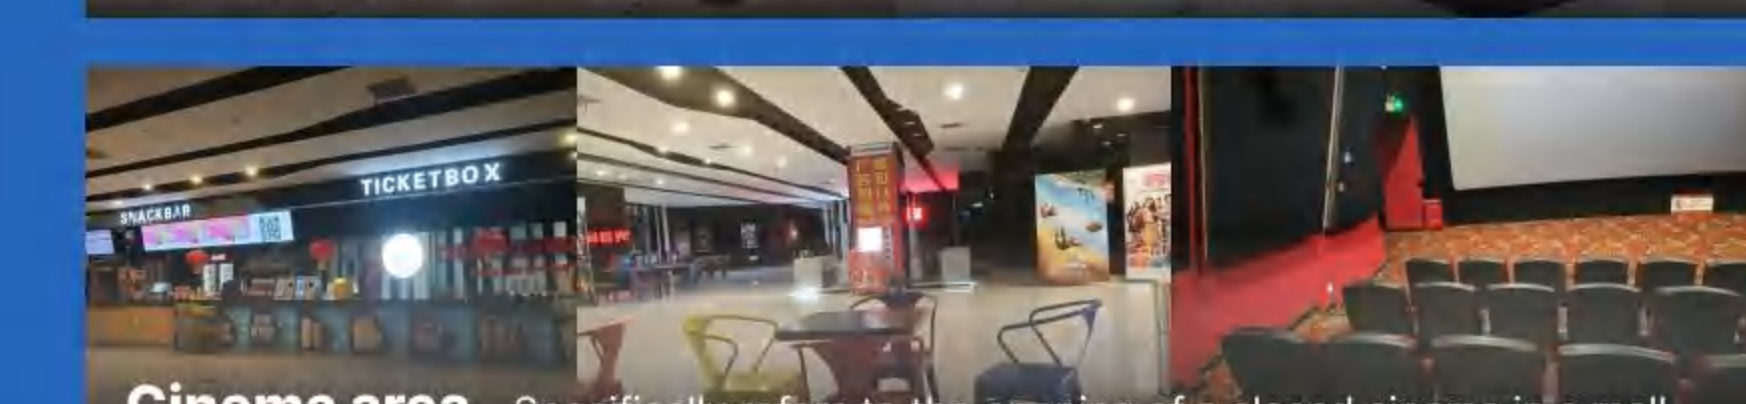

Private premises - Potential programmes for government regulation/government facilitation

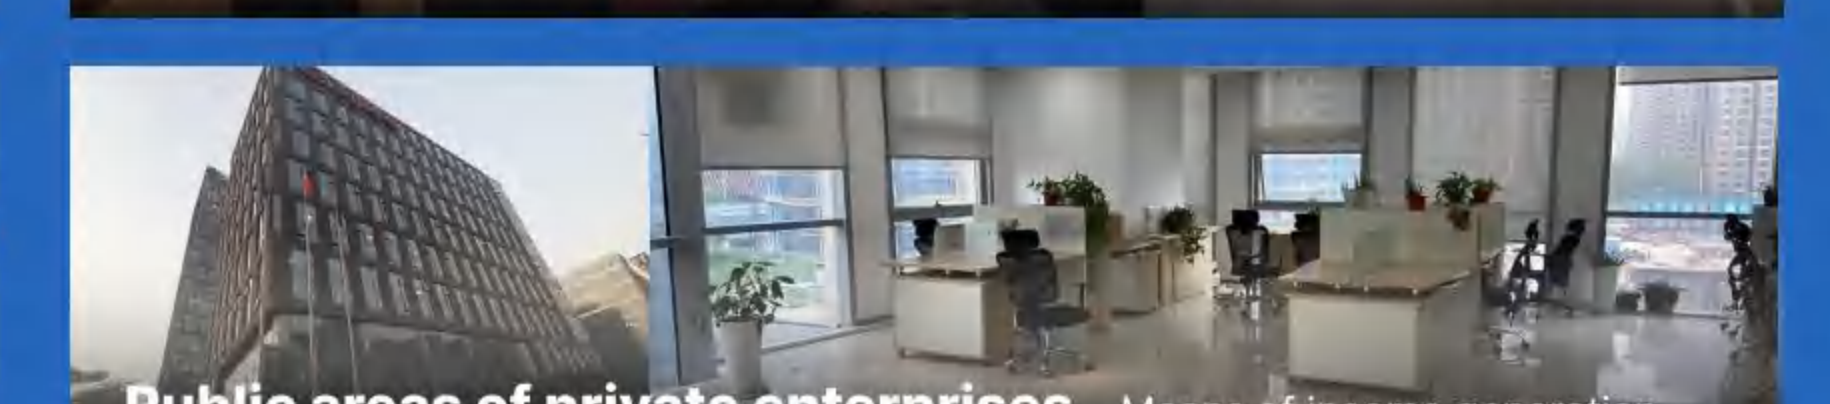

Shopping mall lobby There are plenty of massage chairs

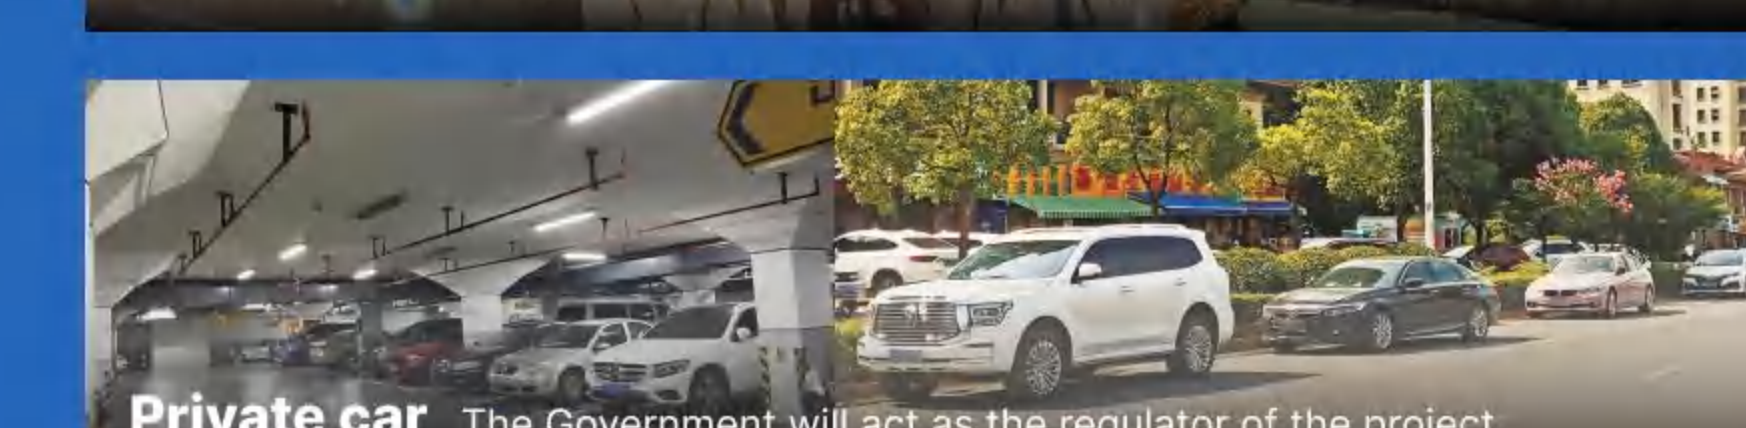

24 Hour Merchant Including restaurants, bookshops, tea houses, etc.

Cinema area Specifically refers to the opening of a closed cinema in a mall

Public areas of private enterprises Means of income generation

Private car The Government will act as the regulator of the project

Note

Ideally, modest modifications that make full use of the current facilities will make it possible to attract university students while at the same time generating economic income for the supply side.

*The data are all from CCTV Finance's research questionnaire

Selected Programmes

In order to better screen the programmes, I talked to some people who regularly communicate with the Government to ask for their views.

Ms Gong
Supervisor
Private Education Organisation

Mr Pang
Public Relations Manager
Manufacturing Company

Ms Kang
Head of Sales
Food Company

"The government will not open up places where there is risk and confidentiality, such as the Public Security Bureau, the Records Bureau, etc."

"The probability of opening up the non-direct-to-consumer private sector is unlikely, and the comparative risks outweigh the benefits."

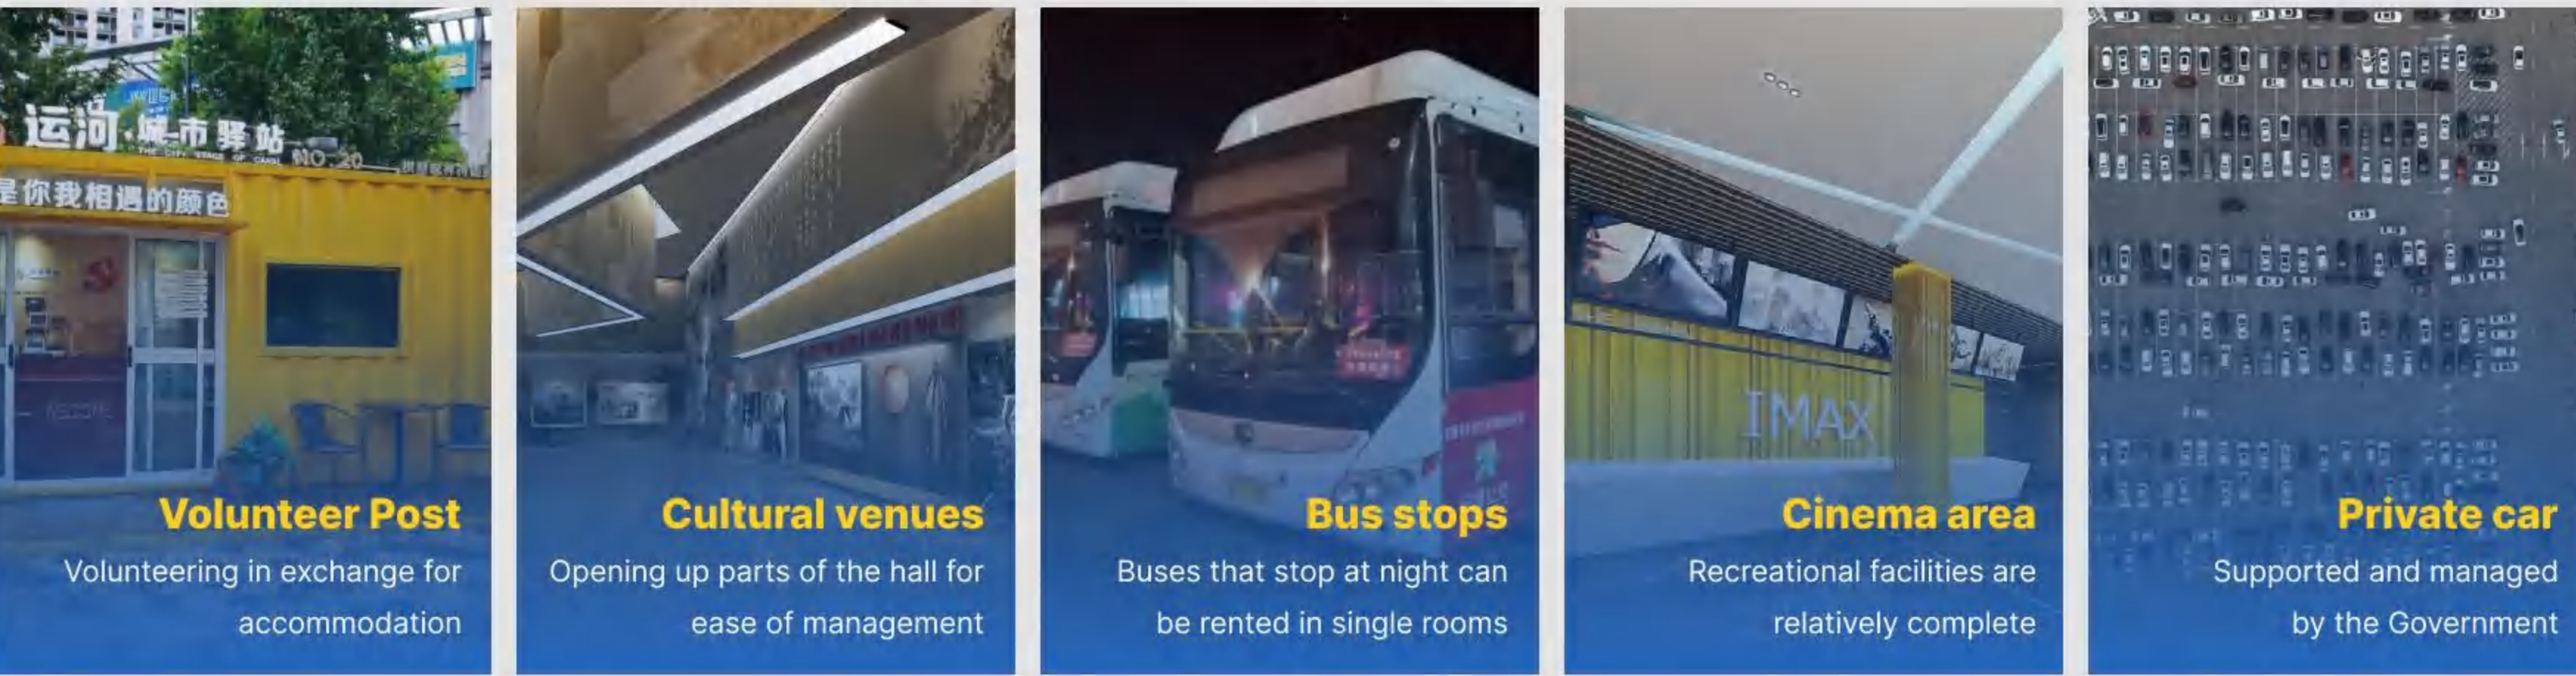

"Programmes should be easy to administer, have some penalties and be conducive to supply-side acceptance"

"It should naturally be the most feasible to generate revenue without affecting the normal opening and operation of the business."

"Putting yourself in the other person's shoes is the only way to make both parties happy."

01 Removal of programmes that may pose greater risks to government management

02 Removal of programmes that create greater financial risk and expense for providers

Programme Showcase

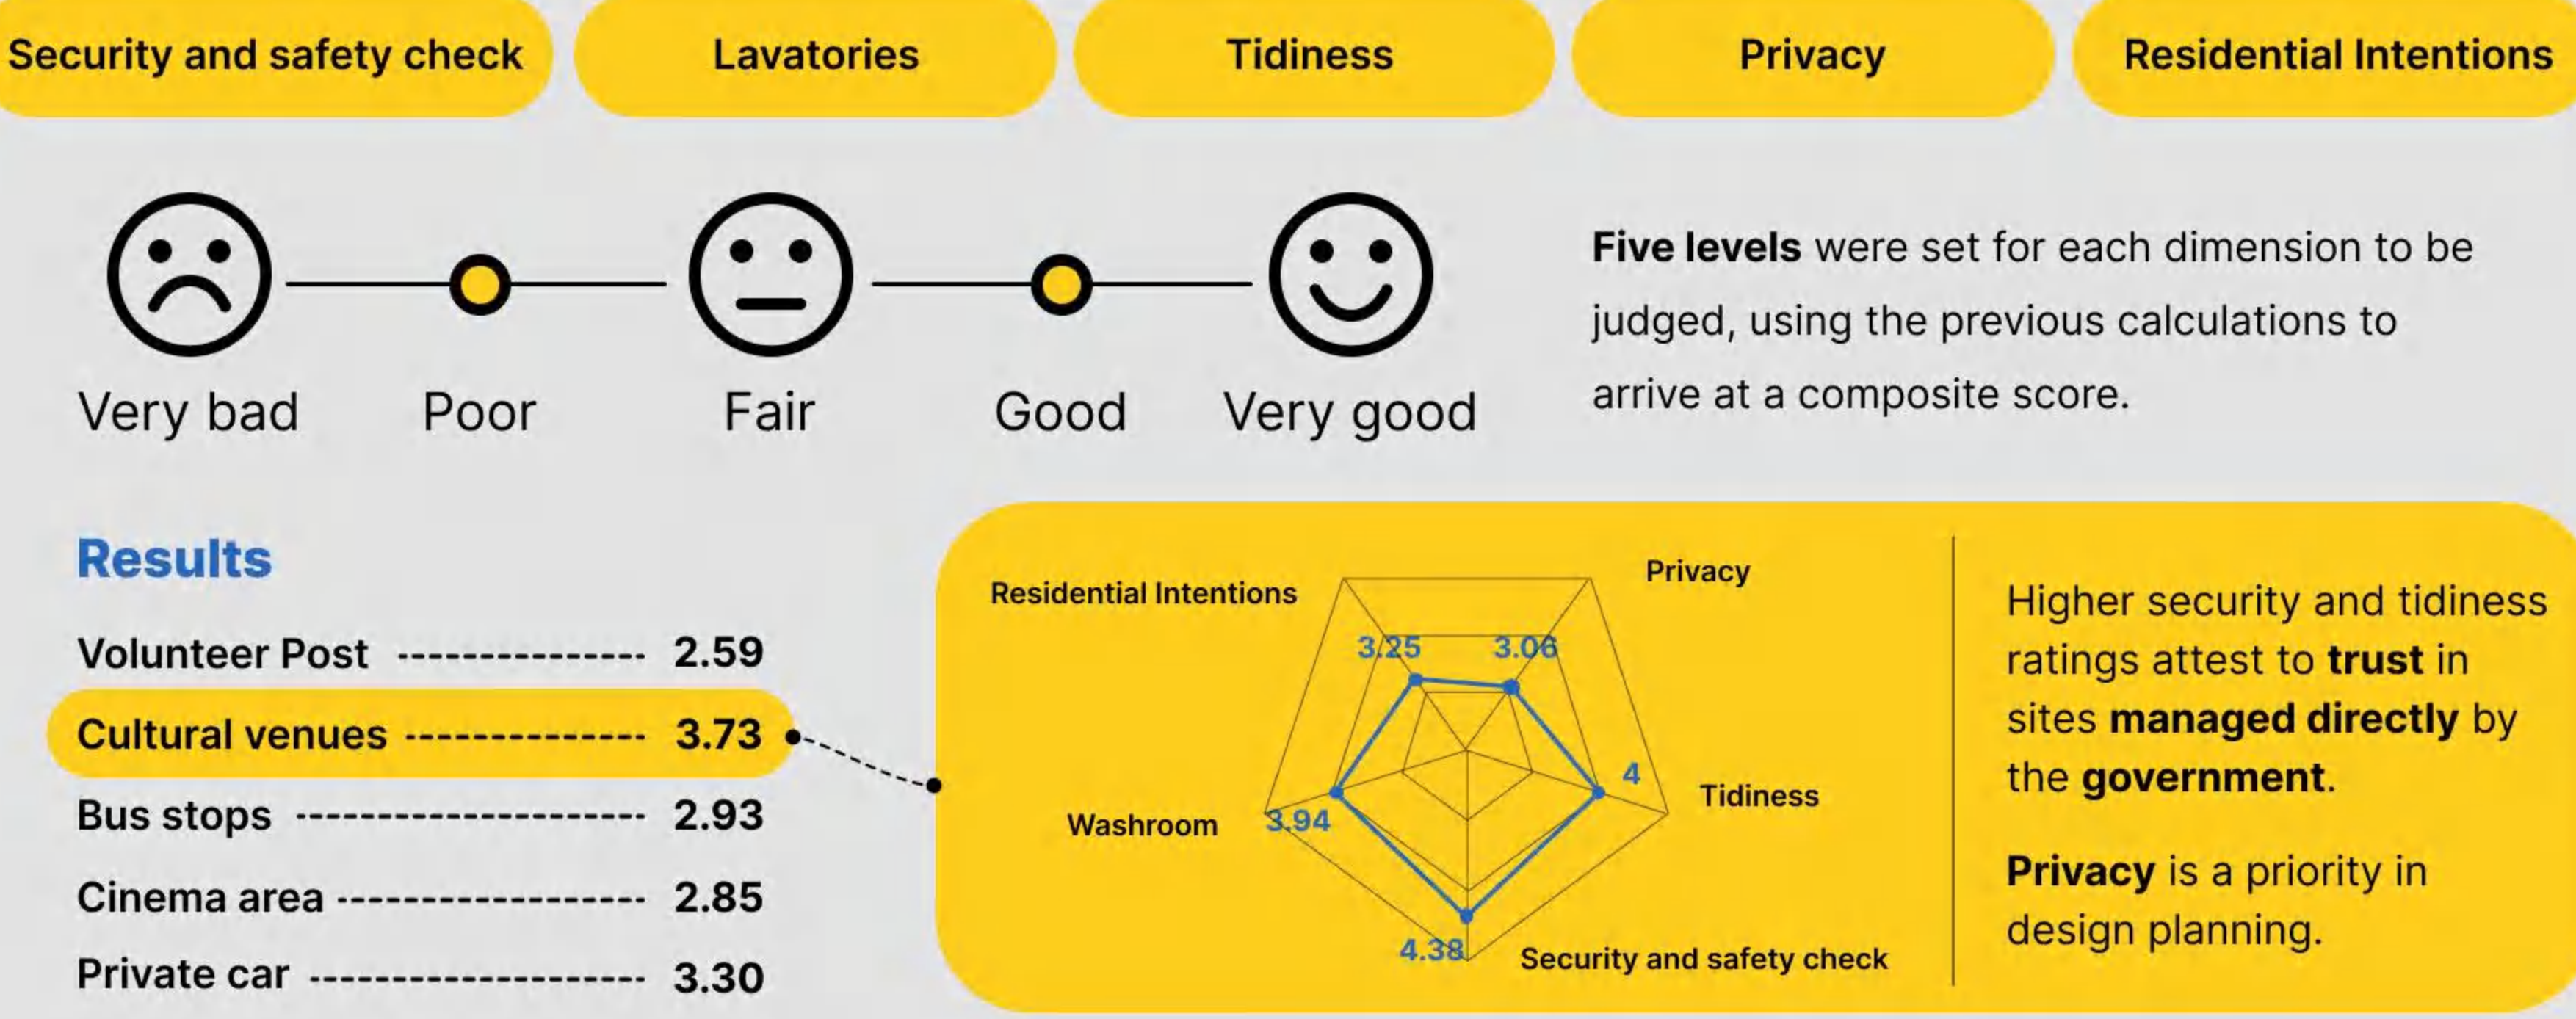

Service Blueprint

Strategic decision

Return questionnaires to university students to match scores on prioritised dimensions and spatial scenarios

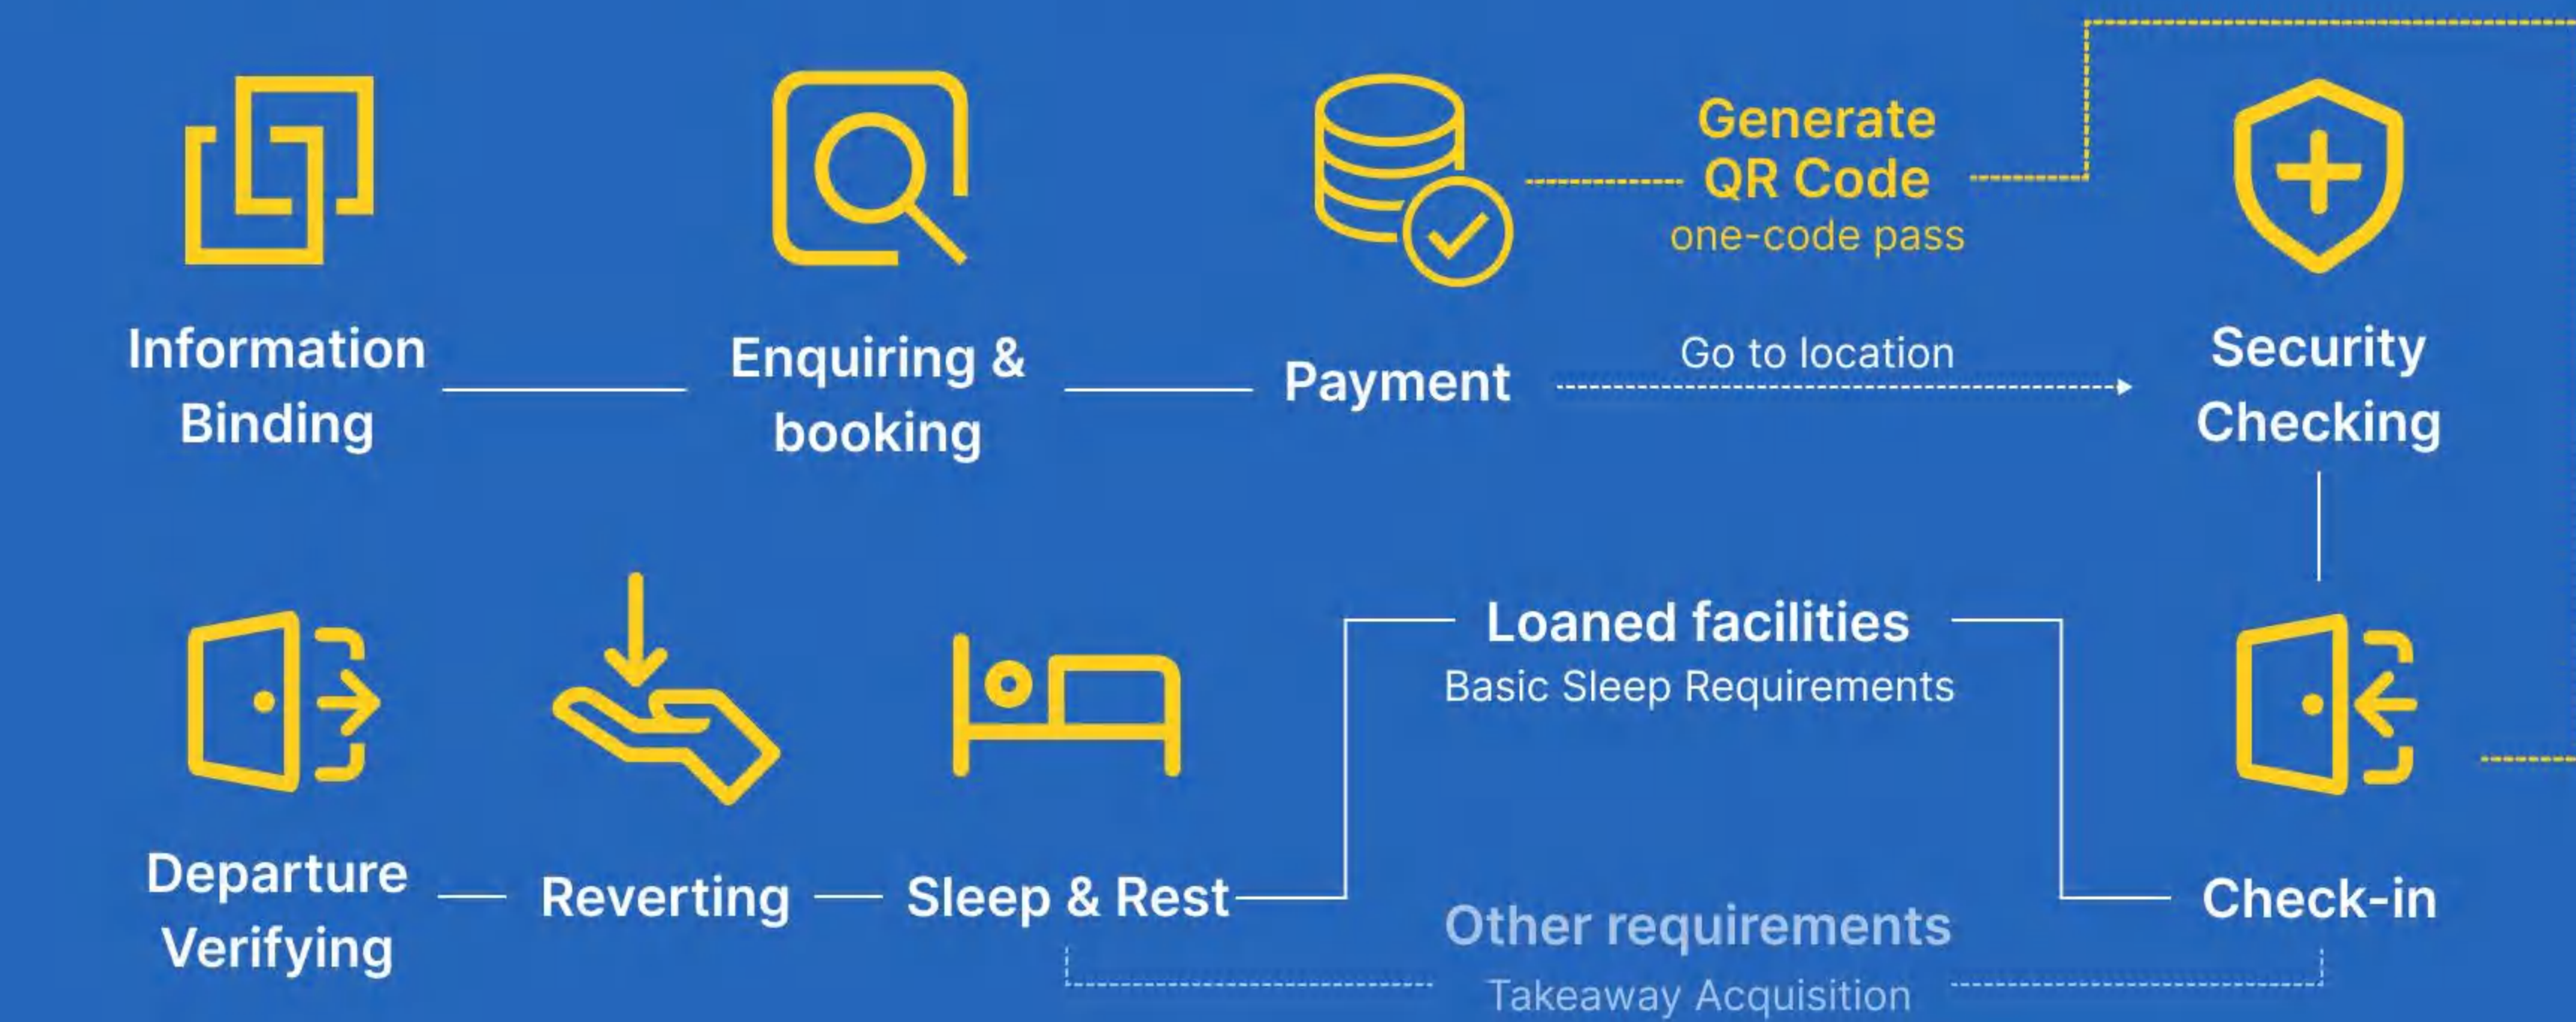

*The price dimension has been removed because it is difficult for respondents to evaluate when there is no cost.

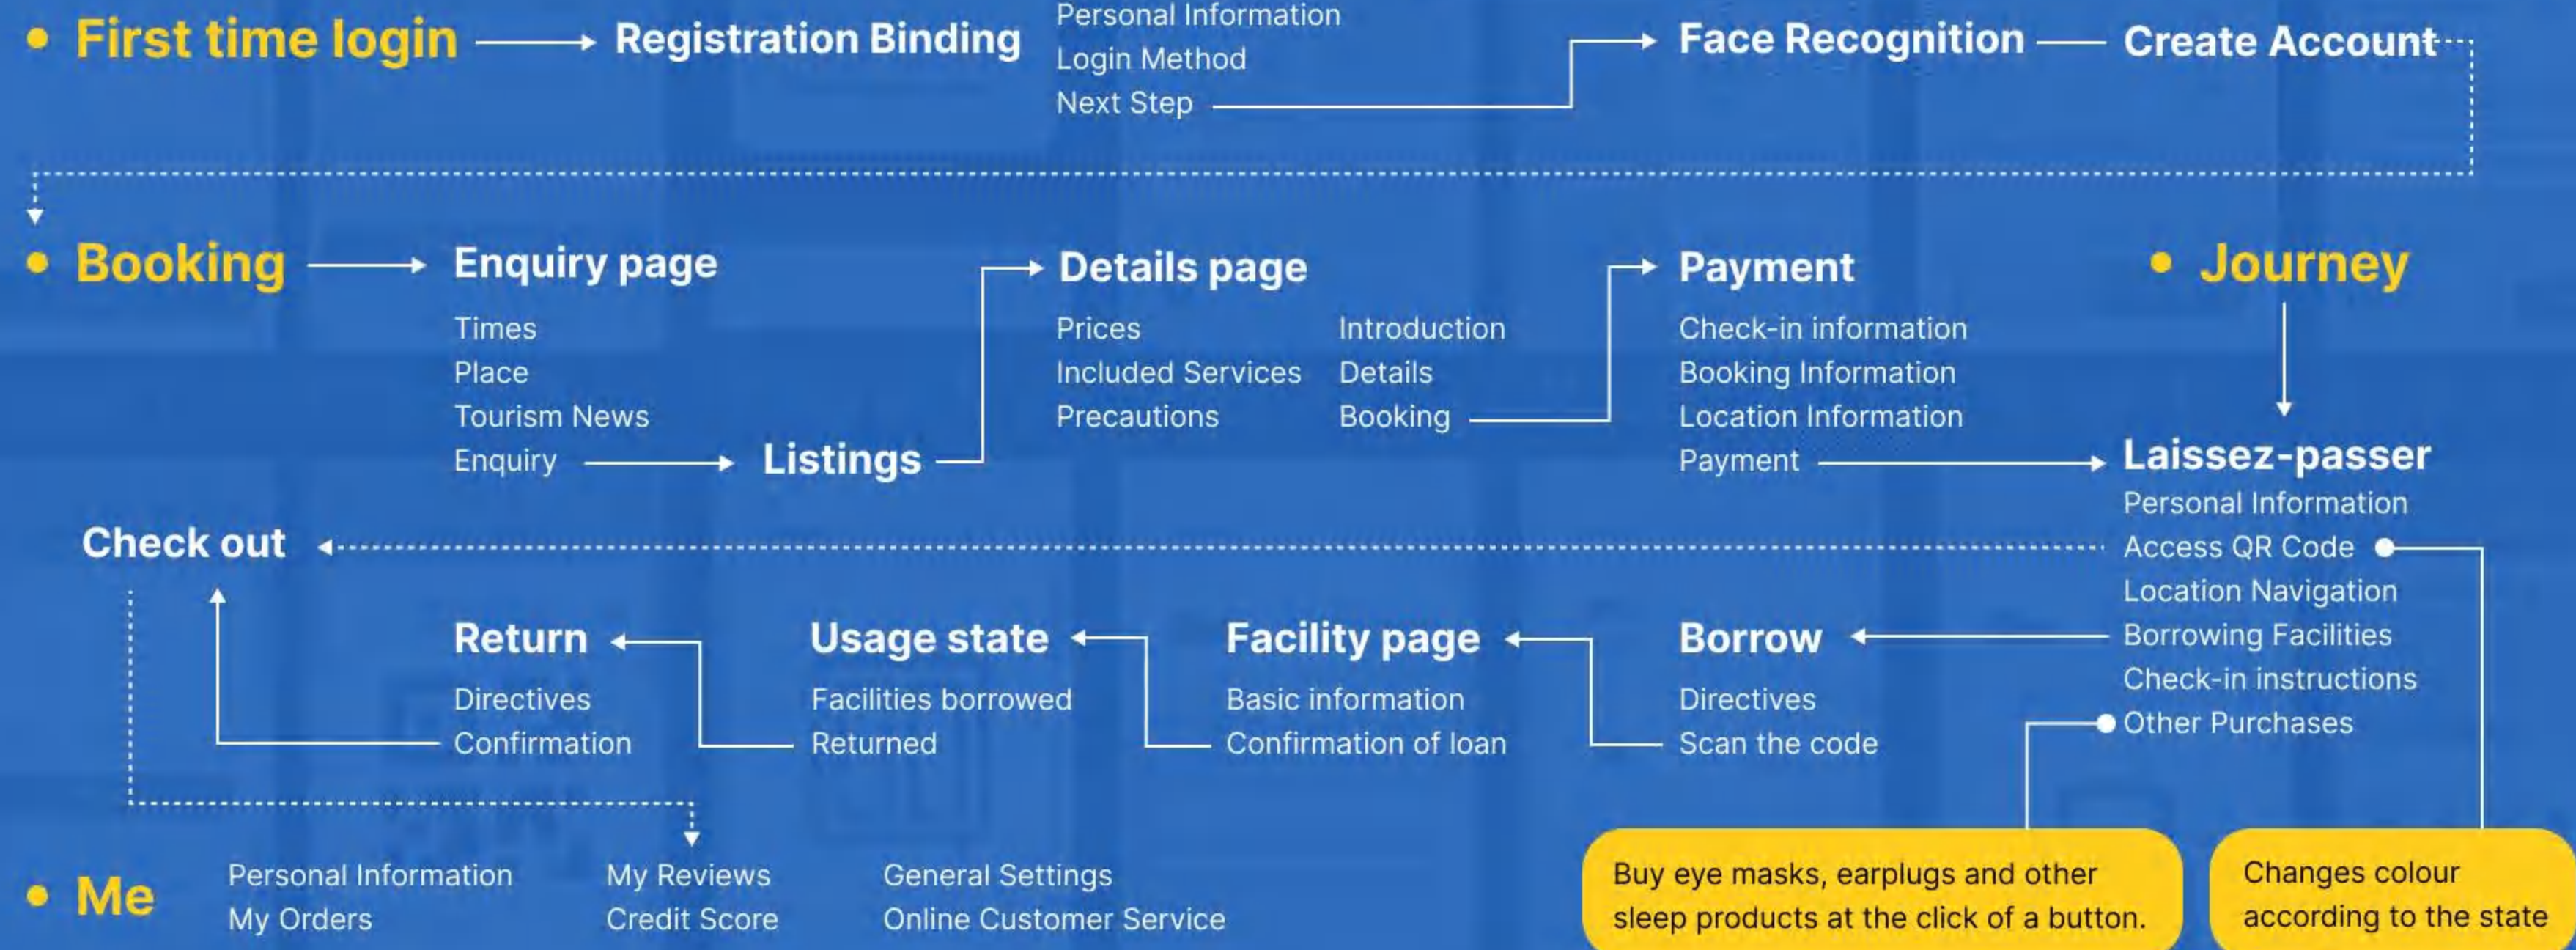

Design Process

Provide the lowest possible operating costs while delivering provide a satisfactory service

User Flow

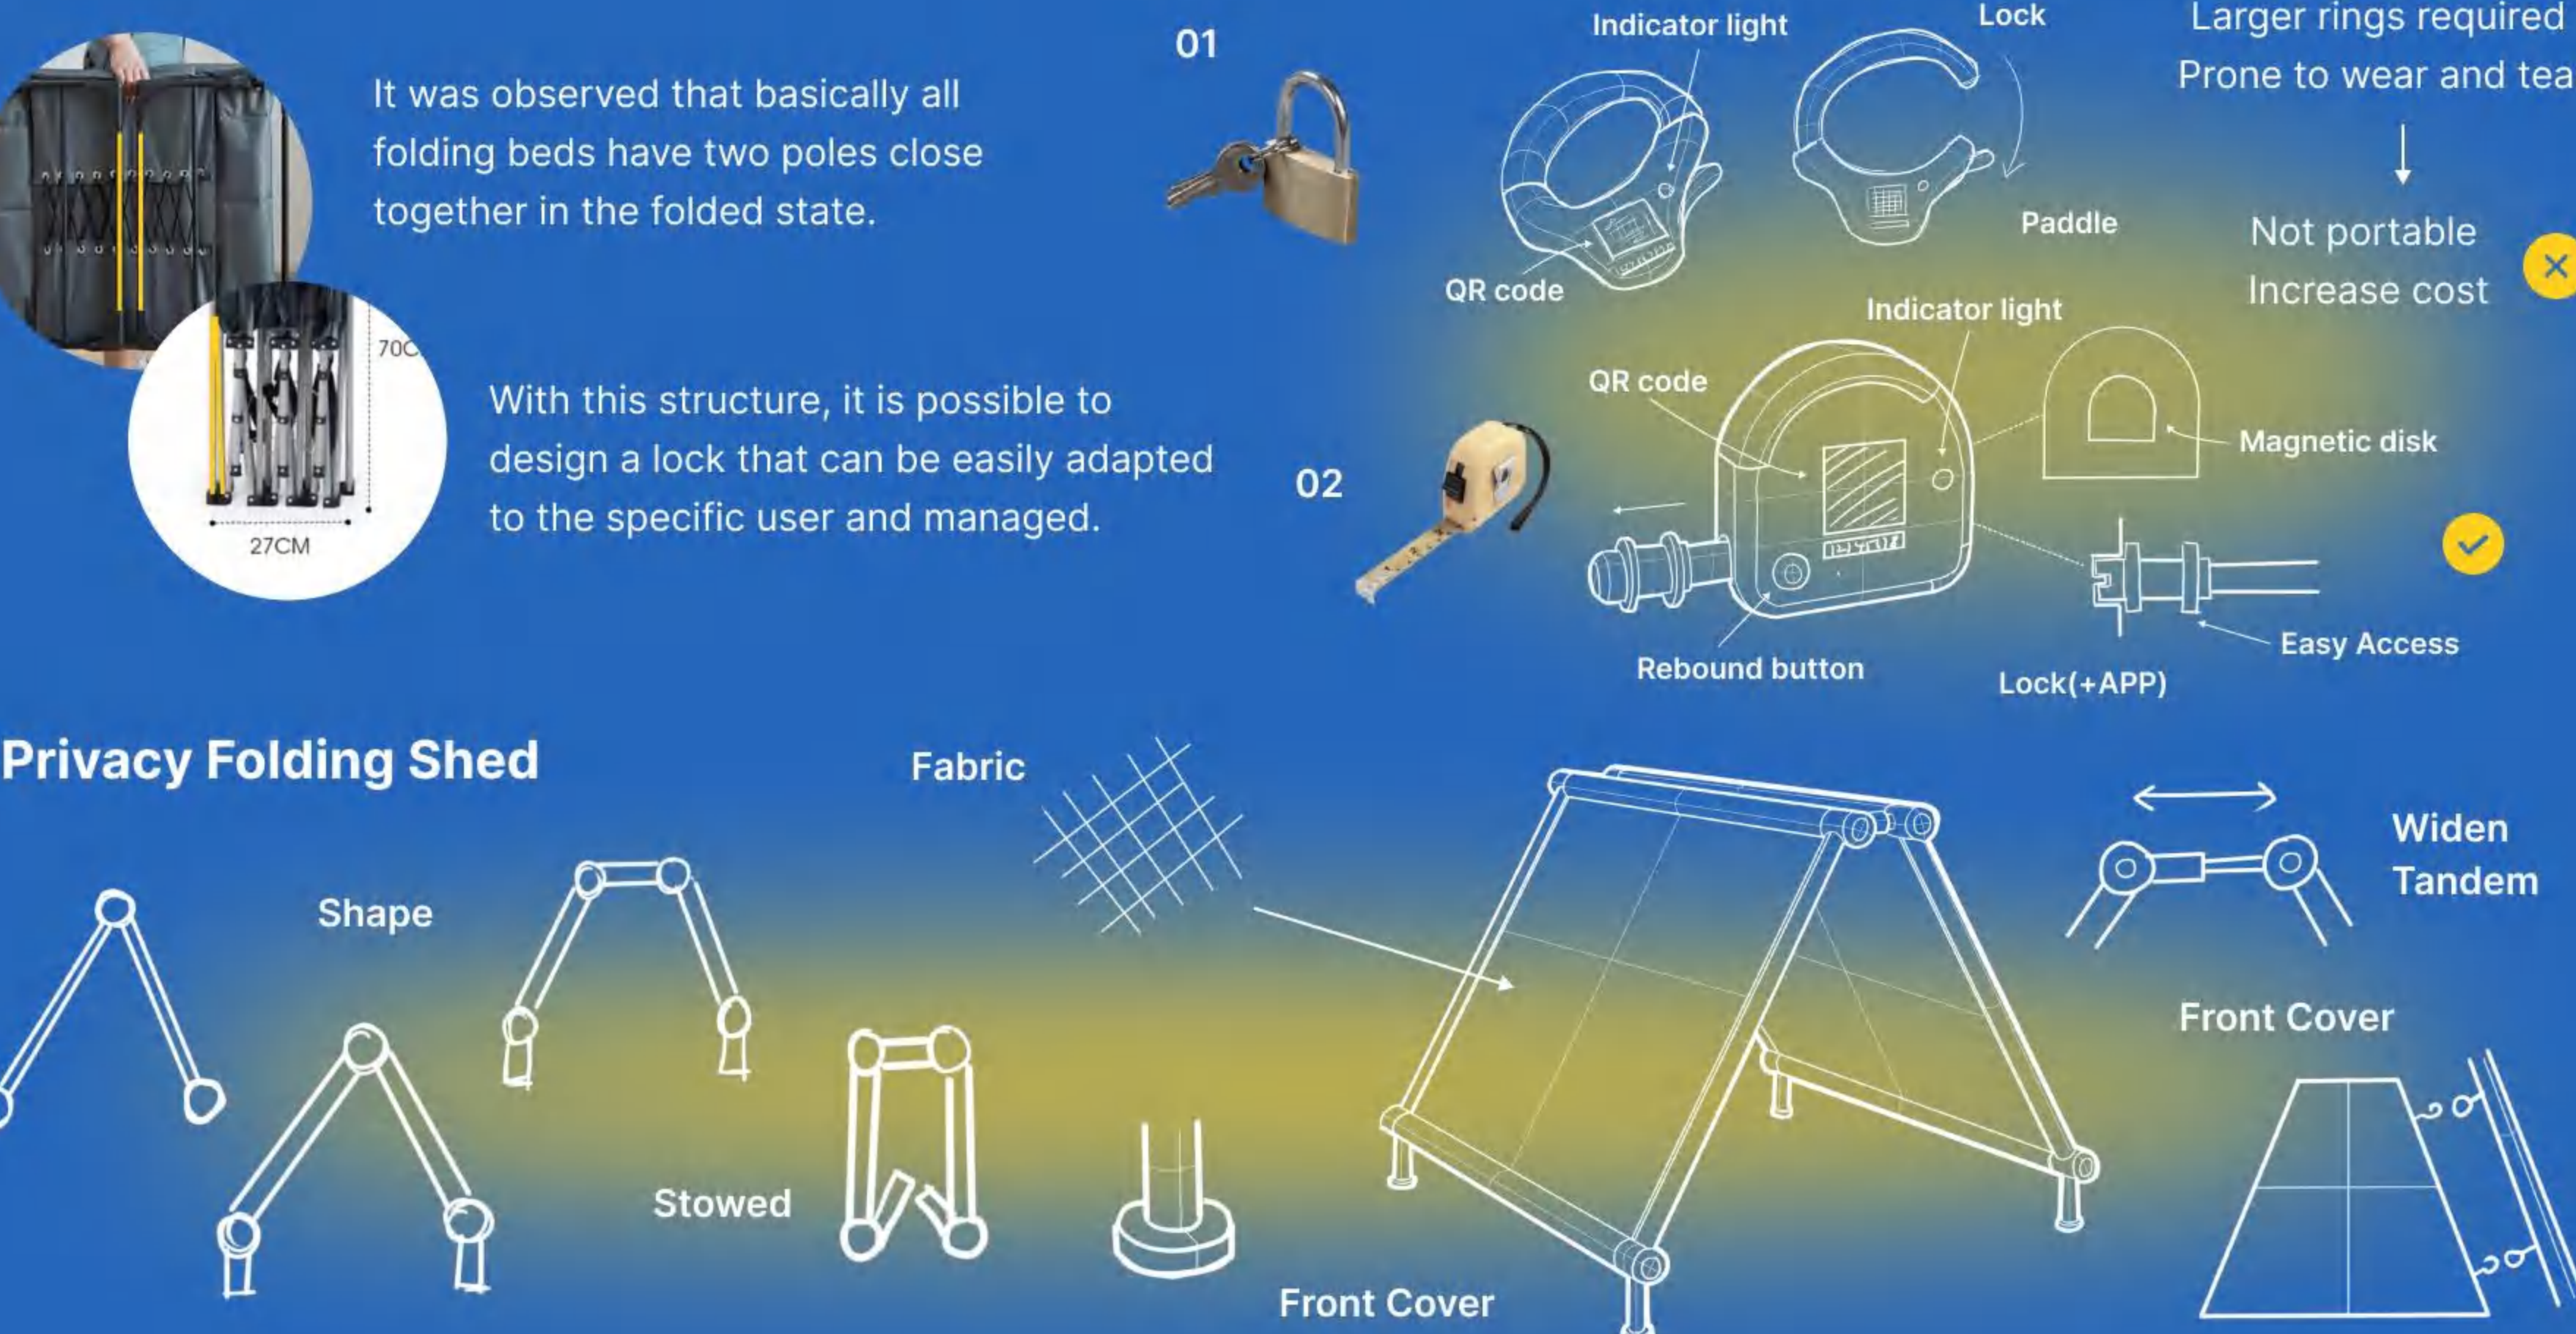

Software design

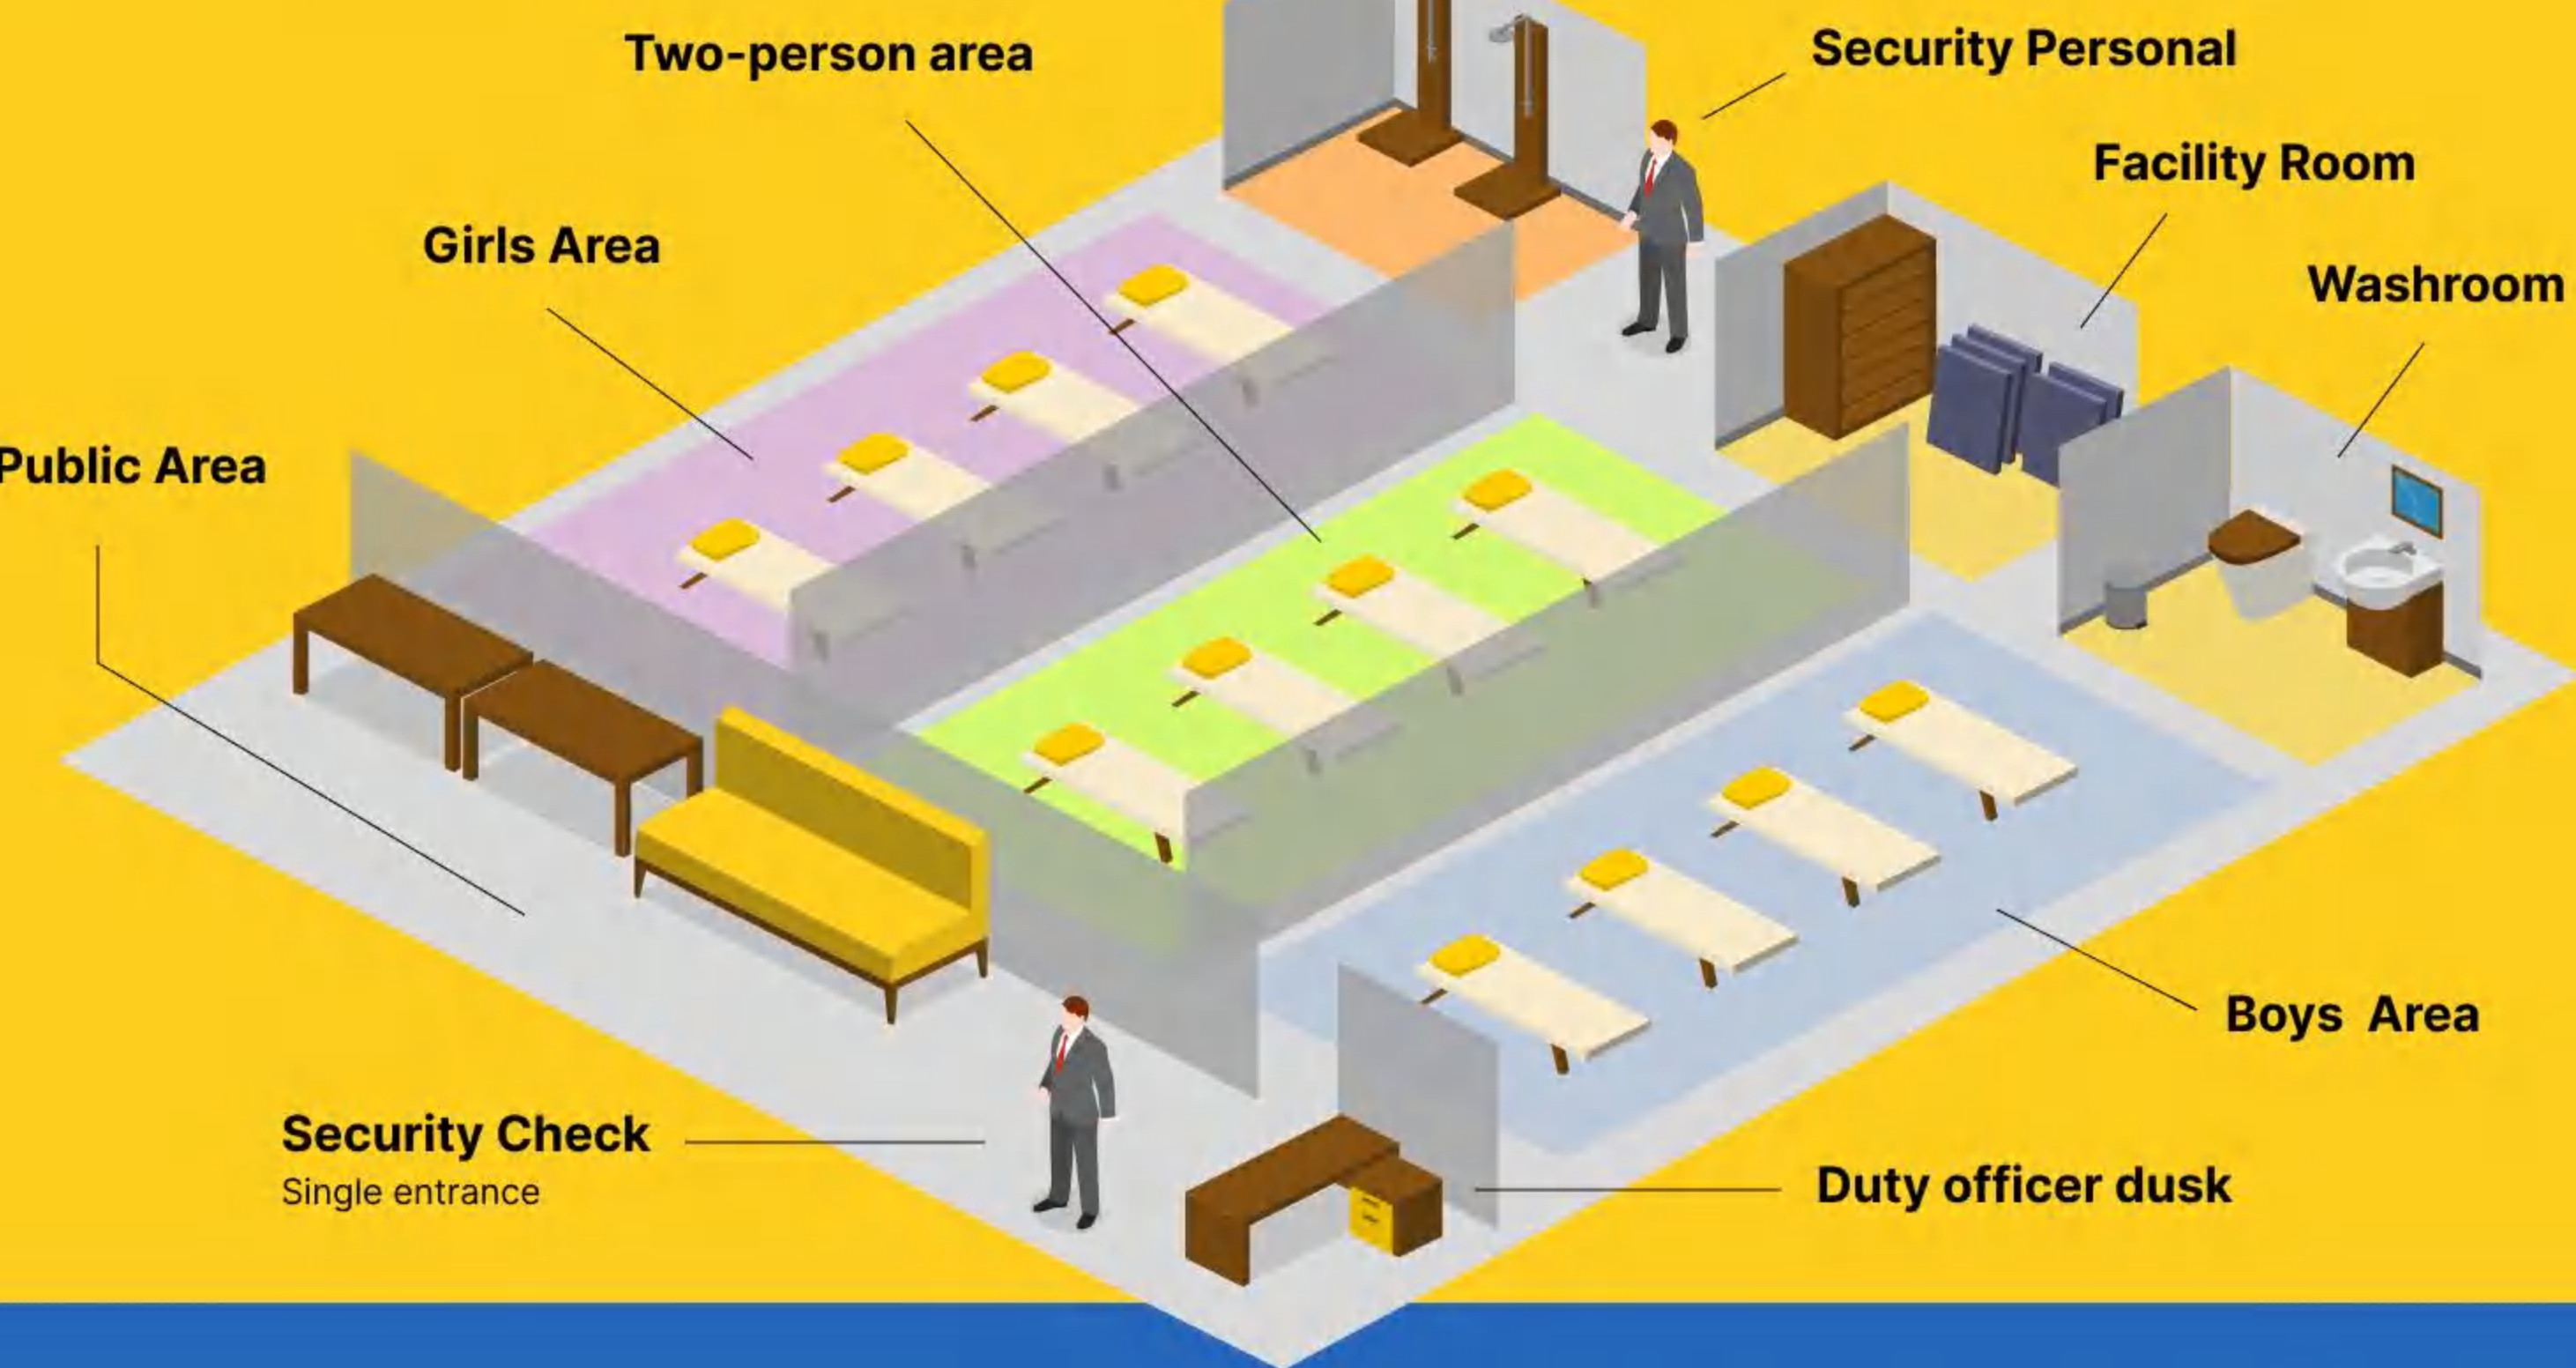

Hardware design

In order to reduce costs, it is recommended to use single folding beds directly on the market.

Site Planning

Price Settings

Base price: Overnight fee (rollaway bed included). Extra service: Privacy board, bathroom facilities, etc. Other need: Take-out purchase.

Commercial propaganda

Experience = Treasure

- Product design
- AR interface design
- Business design

Inspired by my interest in local history and a film called *The Internship*, I developed a project where seniors contribute to local chronicles, relieving depression and addressing financial needs. It is a pathway linking personal experiences to local history, enabling them to monetize their knowledge.

The final solution, inspired by *active aging* and technological trends, is an AR app that uses AI to convert oral histories into visuals, creating diverse formats for presenting local history.

Inspiration

'Lord Fan' statue
My hometown is known as 'Fan Gong's hometown', in honour of Fan Gong, the government built a statue as a city card.

1989 Establish

2003 Second relocation

1995 First relocation

2024 Current Location

People like to call the spot where the statue used to be **'Old Lord Fan'**, which often confuses me because it's a name for a place that isn't even marked on a map!

Local Chronicles's Problems

Interesting details like this make me interested in local Chronicles , but there are many problems that make it hard to find resourceful local history nowadays.

Social Dimension
Failure to form good social connections

Facility Dimension
Inadequate construction of working institutions & collections

Talent Dimension
Difficulty in data collection. Weak cultural identity

Experience never goes out of fashion
Robert DENIRO, Anne HATHAWAY
THE INTERN

Plenty of time Cultural identity Personal experience Well-informed

Just like the film's main theme.
'Experience never goes out of fashion'

Investigation

Oral history /ˈɔrəl ˈhɪstəri/

In fact, this method of historical research, which collects the oral memories and personal experiences of individuals or groups of individuals, is of great value to historical research and is called **'oral history'**.

By observing my grandparents, their friends and my elderly neighbours, I found that an interesting phenomenon is that today's elderly people **spend a lot of time on their mobile phones every day**.

Relevant Data

As of June 2023, the size of China's Internet user group aged 60 and above had reached **140 million**.
From CNNIC

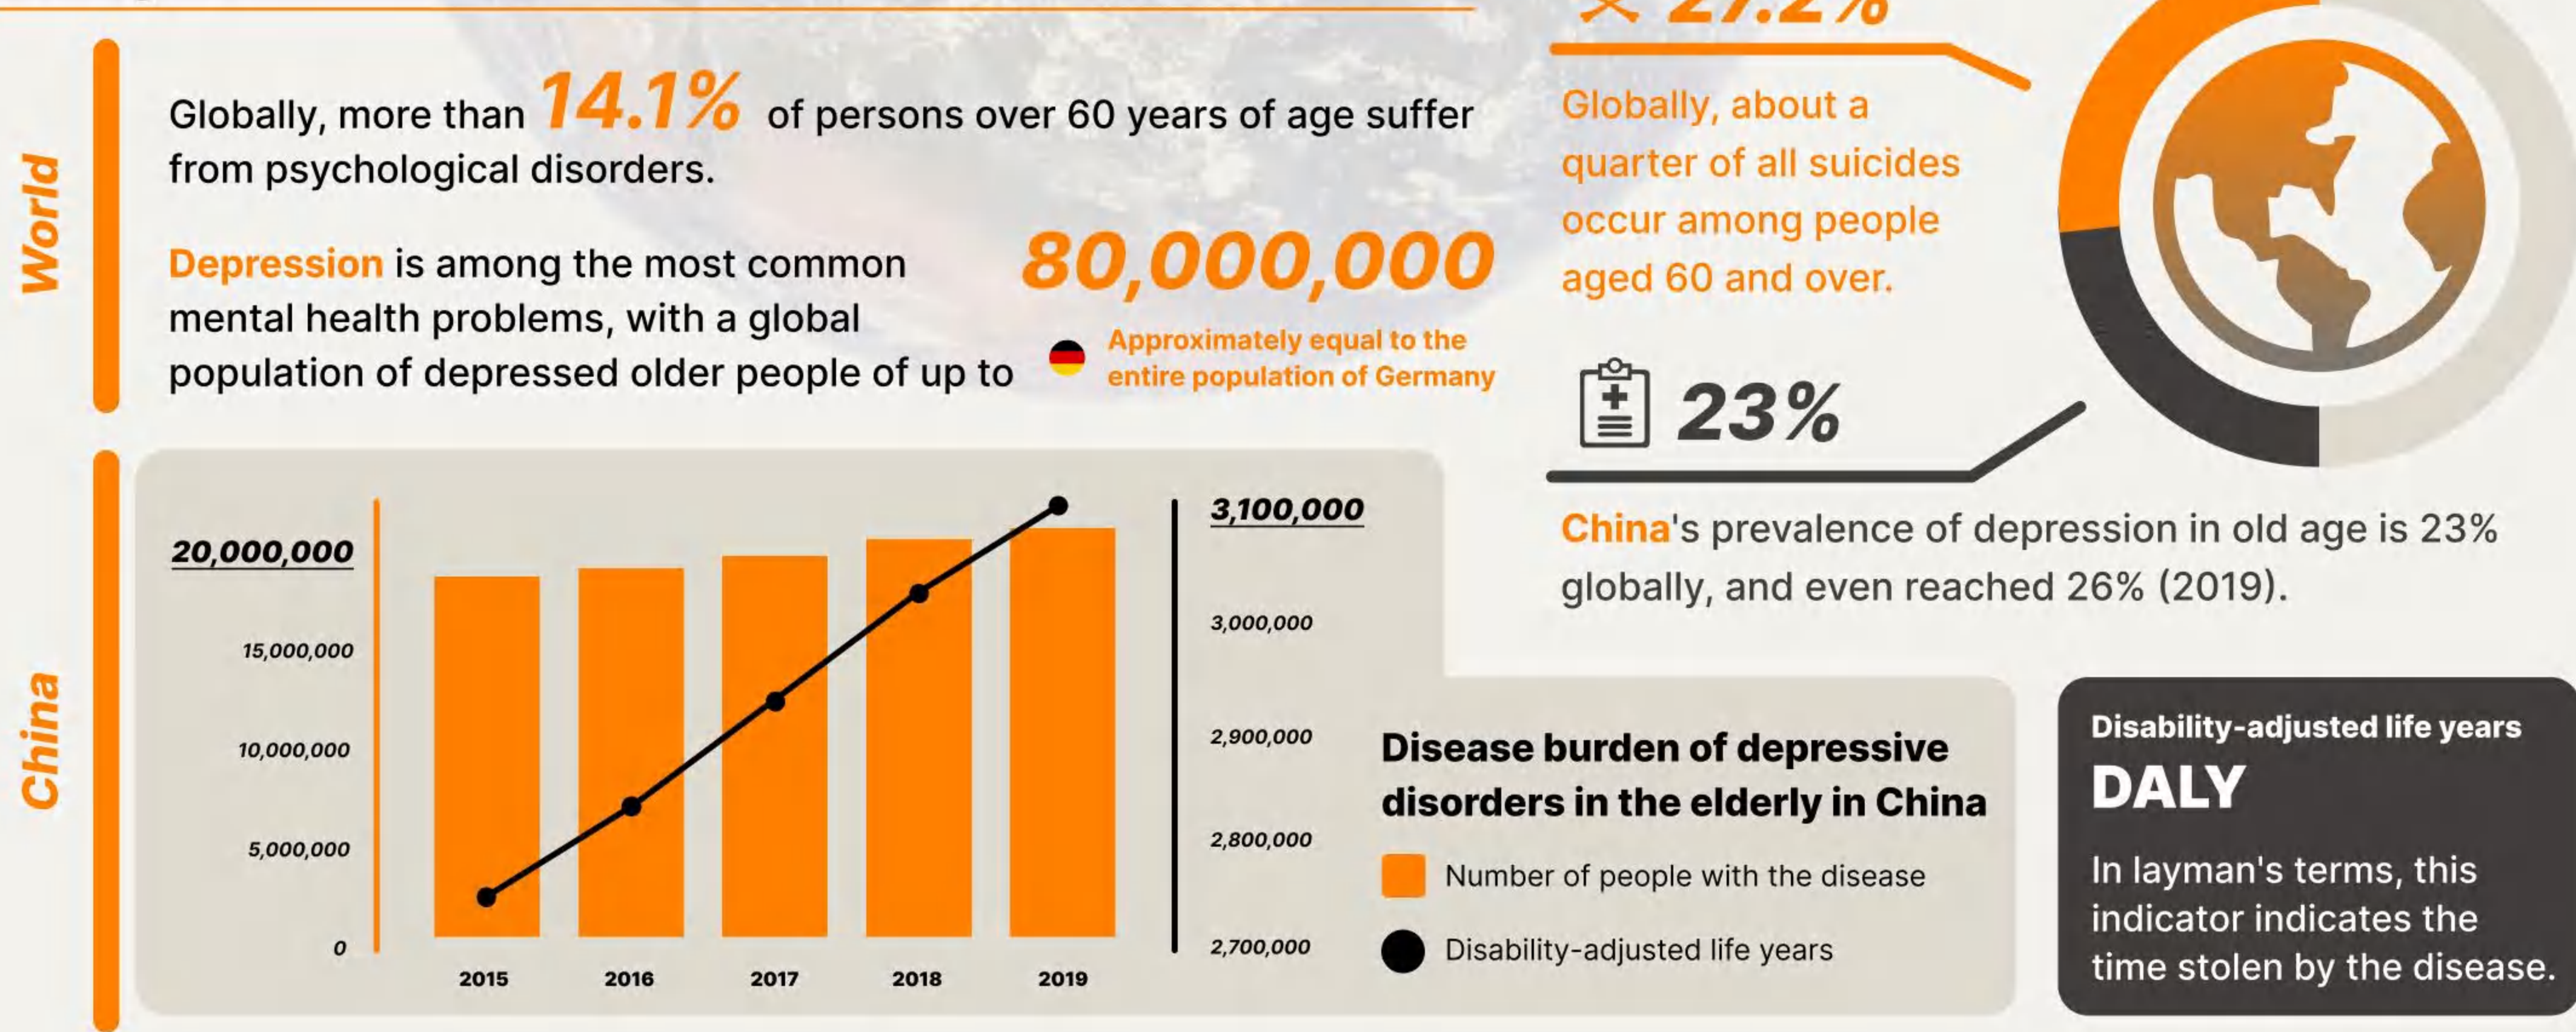

Nearly **10%** of elderly people go online for more than **6 hours** a day.
From Tencent and People's Daily

Phenomenon
Internet addiction

Nature
Mental disorder

As the Tencent report writes
"More than 100,000 older people across the country are showing extreme loneliness online."

Analysis

Academics often analyse the causes of psychological problems in older people from a number of perspectives

Inadequate social participation

Participation of older persons in the compilation of local histories to enhance social participation.

Life Review Theory (Butler 1963)
It helps the elderly address unresolved issues from earlier in life, alleviates anxiety, and effectively relieves depression. And it is widely recognized abroad.

Lack of care for the family

Many elderly people and their families lack awareness of mental health issues, so proactive care and support are essential.

Degradation of body functions

Negative ageing —1990s→ Active ageing
Influenced by Positive psychology and Postmodern thinking

Appeal to the elderly themselves not to be filled with despair because they are no longer young.

Calls on young people not to neglect older people just because they are no longer young.

Enlightenment
Designers need to address ageing with a positive mindset and can try to use bold and innovative approaches.

User research

Retirement is an important point for the shift in the level of social participation of older people. My grandparents did the same.

Retirement		
Information	Attempt	Result
My grandma Age: 74 Occupation: Textile factory worker	Cross Stitch	Give Up Exacerbation of visual impairment Leads to lumbar muscle strain
My grandpa Age: 73 Occupation: Beer company manager	Invest in the food industry	Give Up Consuming a lot of energy Disproportionate returns

User Interviews

Interviewer

- What do you get out of it?
- Any regrets?
- Will you adapt to new technology?
- Other suggestions?

Interviewee

- Economic benefits
Government Recognition
 - Lost friends
 - Old House
- I will learn and keep the tradition.
 - Don't get tired of using it.

Summary

- People tend to look for opportunities in areas they are familiar with after retirement.
- Currently there is a lack of a home-based and healthy model of social participation for retirees.
- Ideally, design a business cycle that can generate some revenue for older people.
- Older adults adapt to technology but maintain long-held habits.

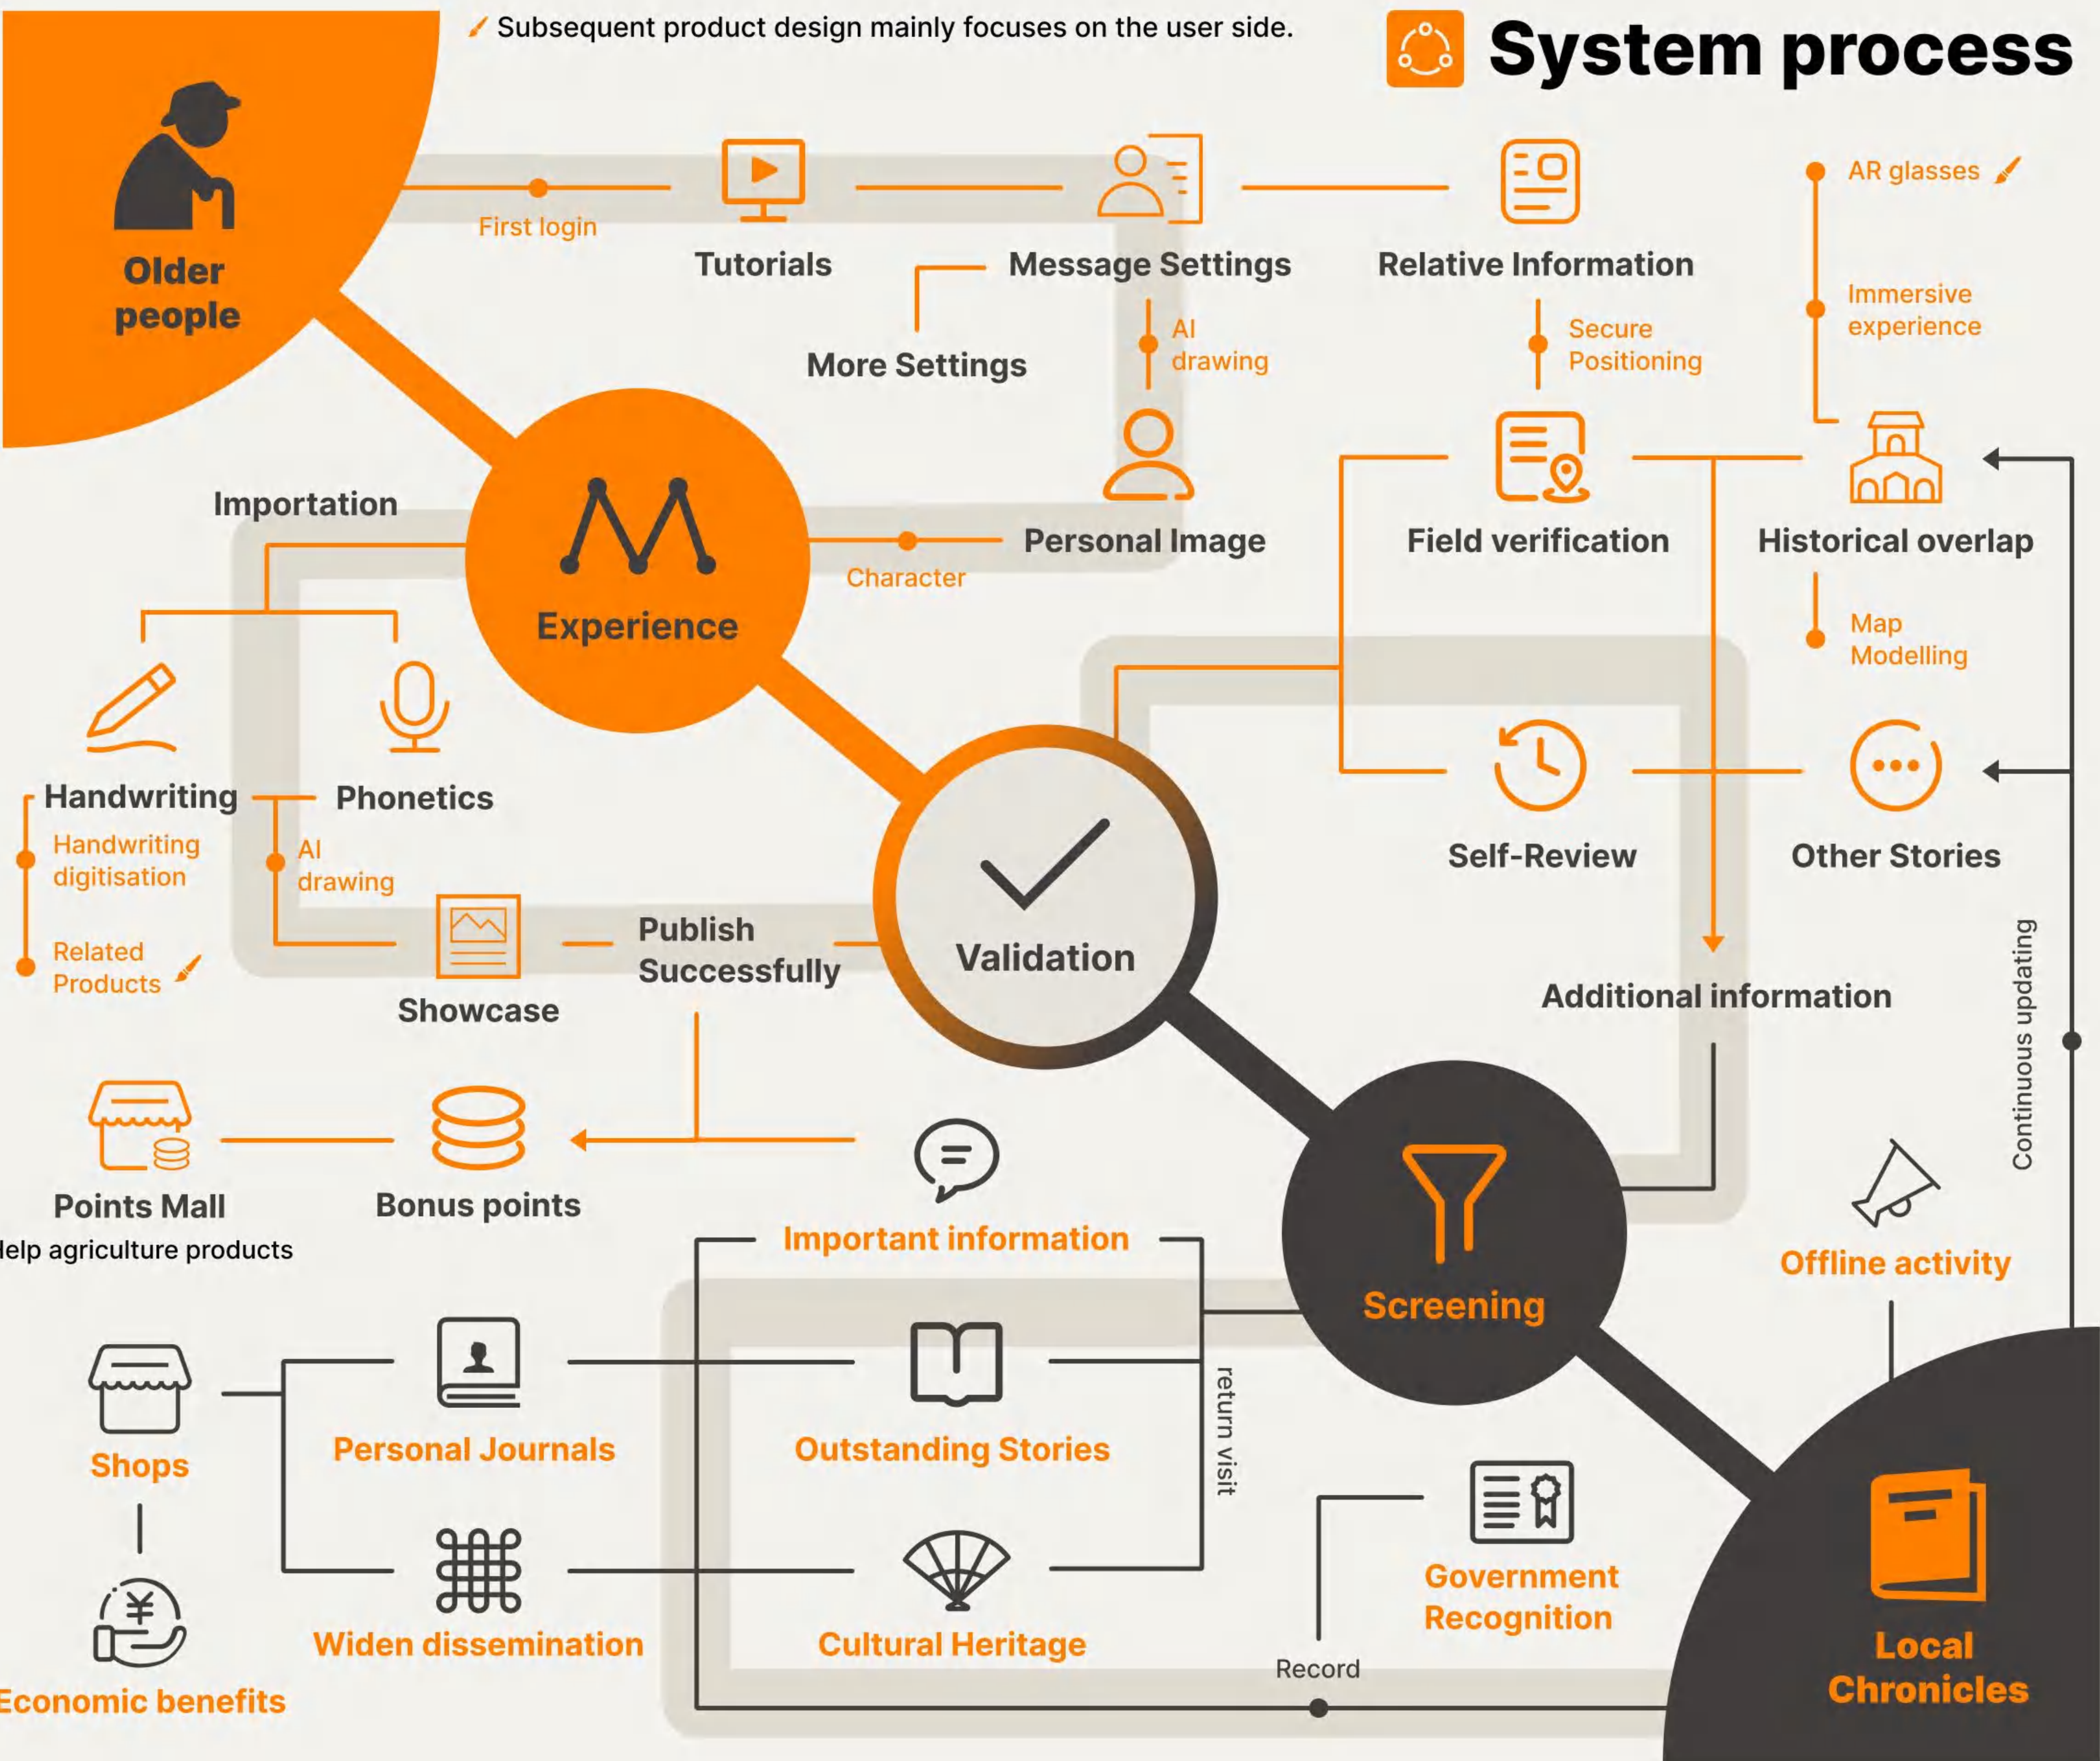

Definition

Products that connect local chronicles with the spiritual enrichment of older adults through the Life reviews theory and the Oral history while bringing additional value to the user.

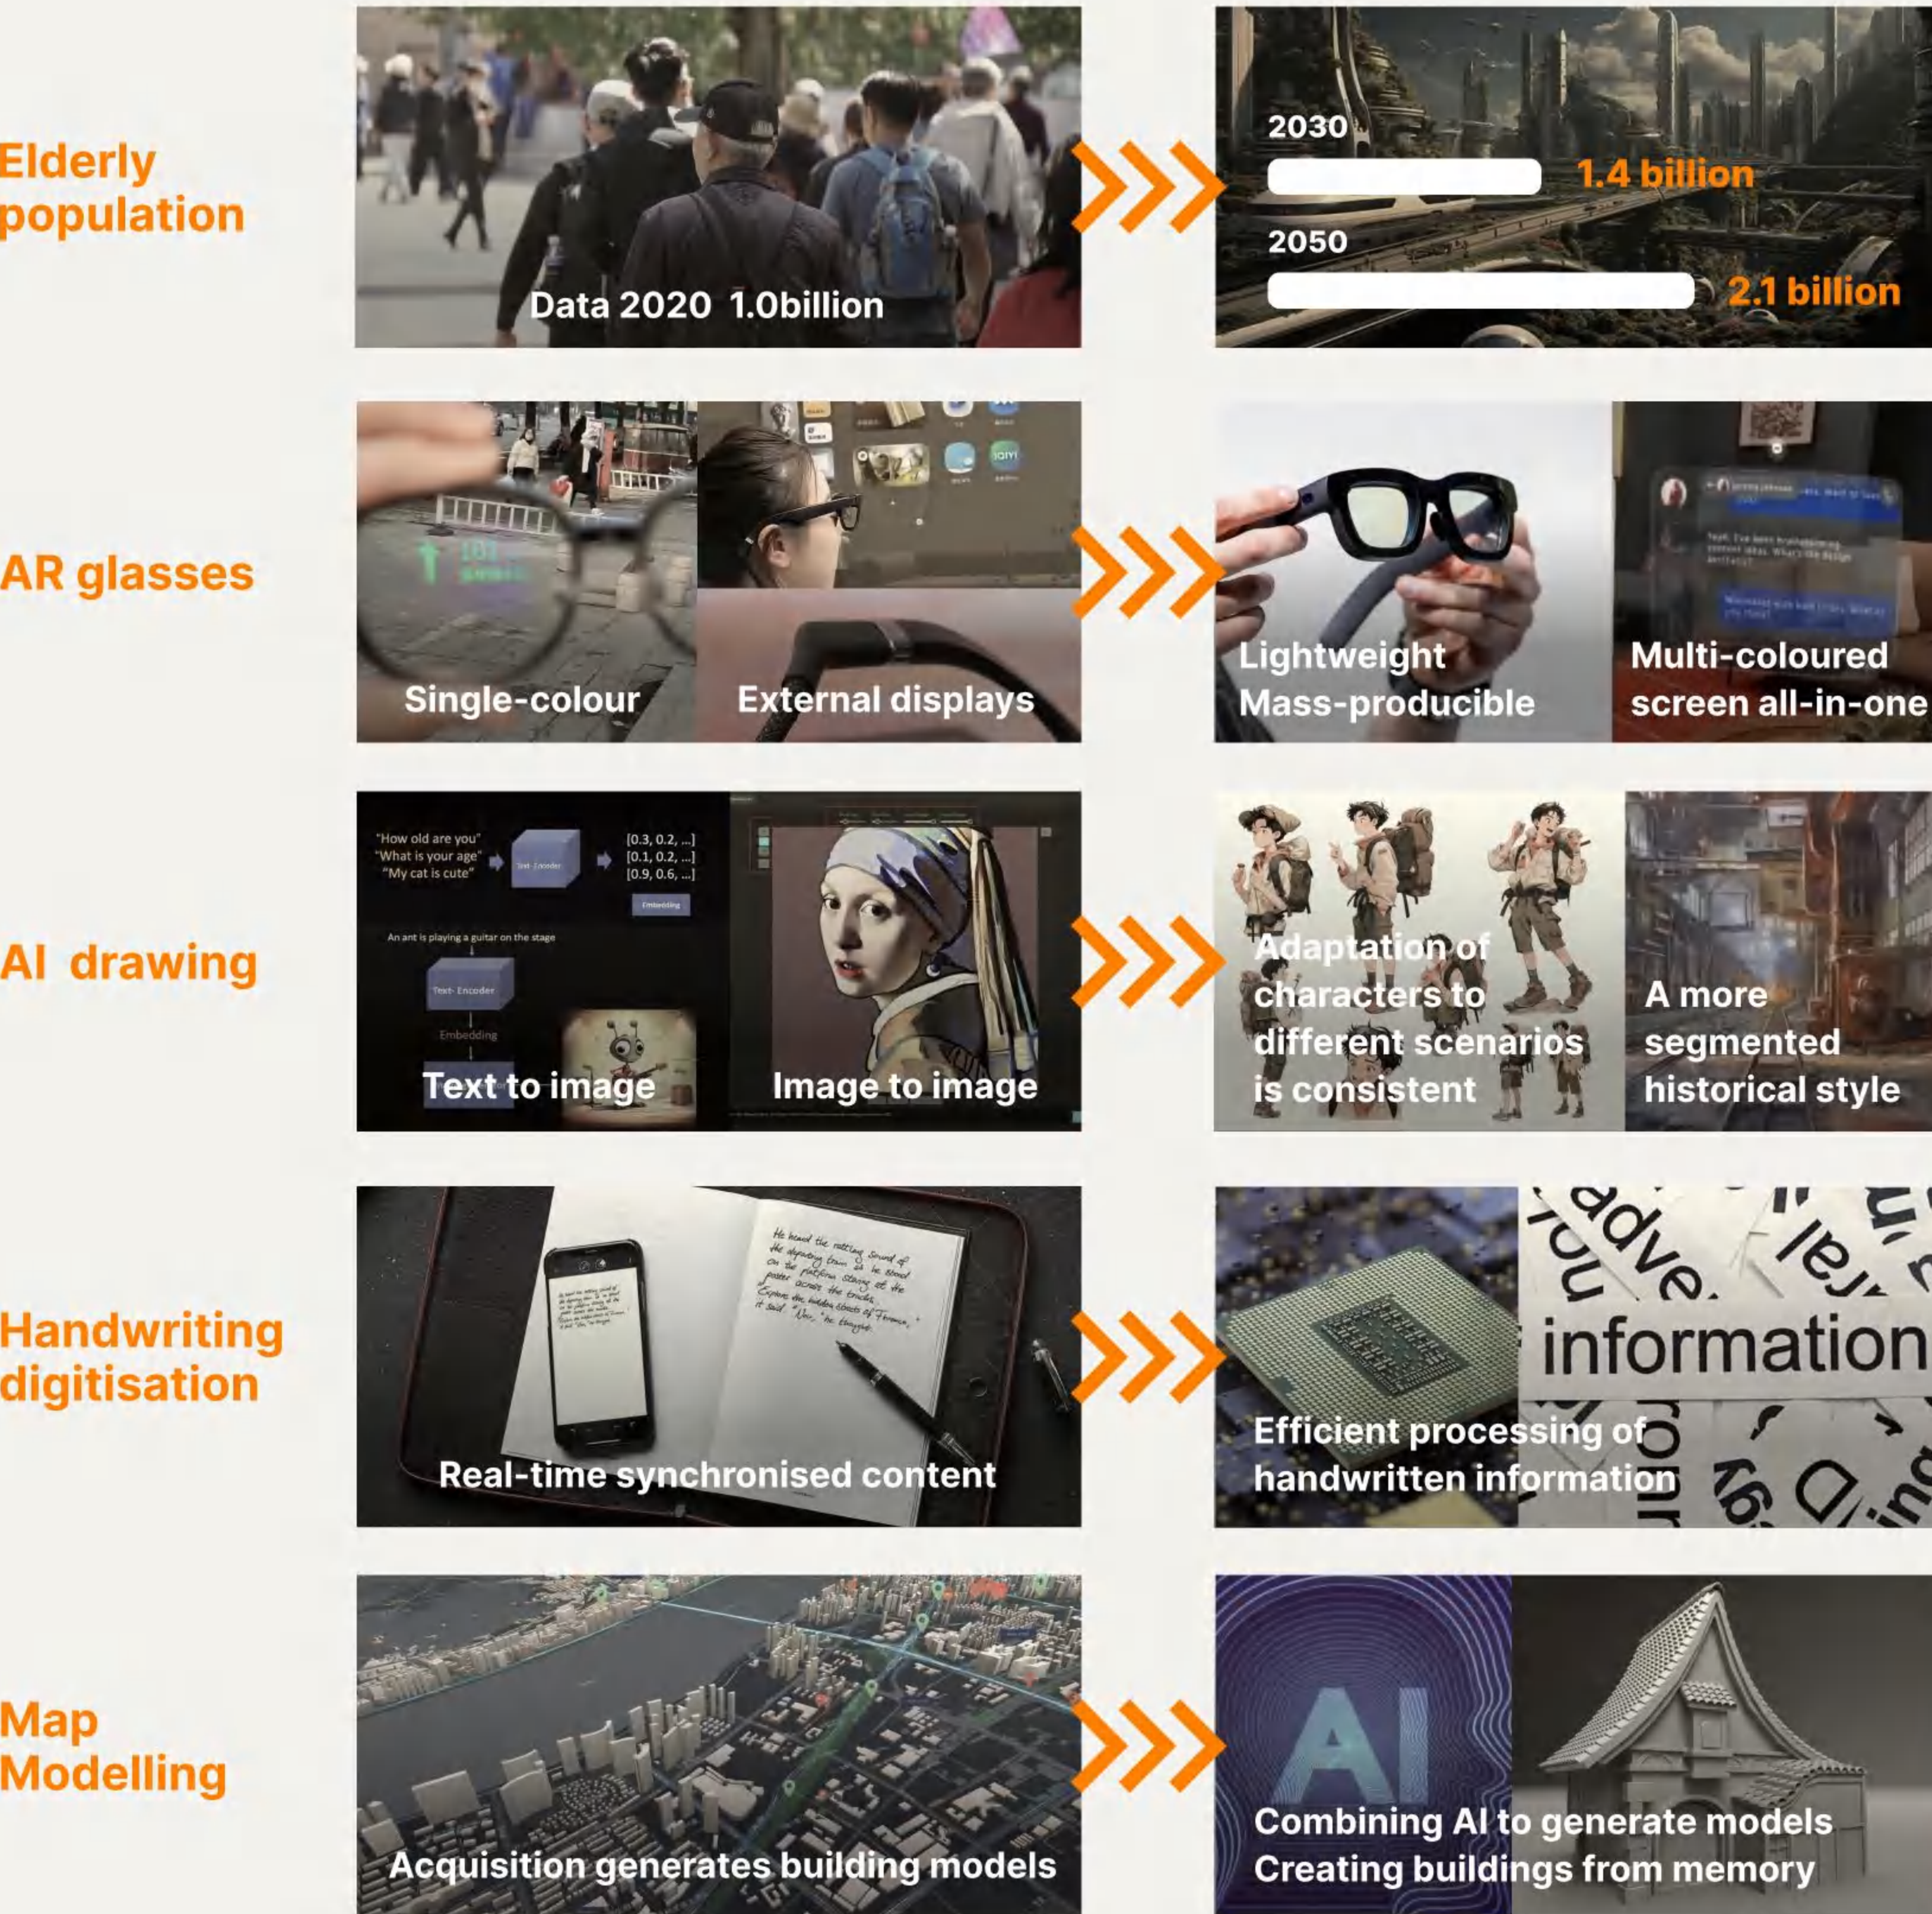

Business Analysis

Key Partners	Key Activities	Value Propositions	Customer Relationships	Customer Segments
Equipment manufacturer	Collecting experiences and verifying them	By collecting the experiences of older people, it is possible to enrich history and bring many benefits to older people, while at the same time turning information into revenue and also creating a sharing platform for older people. Feasibility analysis

As the current technology is not perfectly adapted, the technology used in this product is based on the current development trend of short-term future applications, with a certain degree of foresight and feasibility.

Products

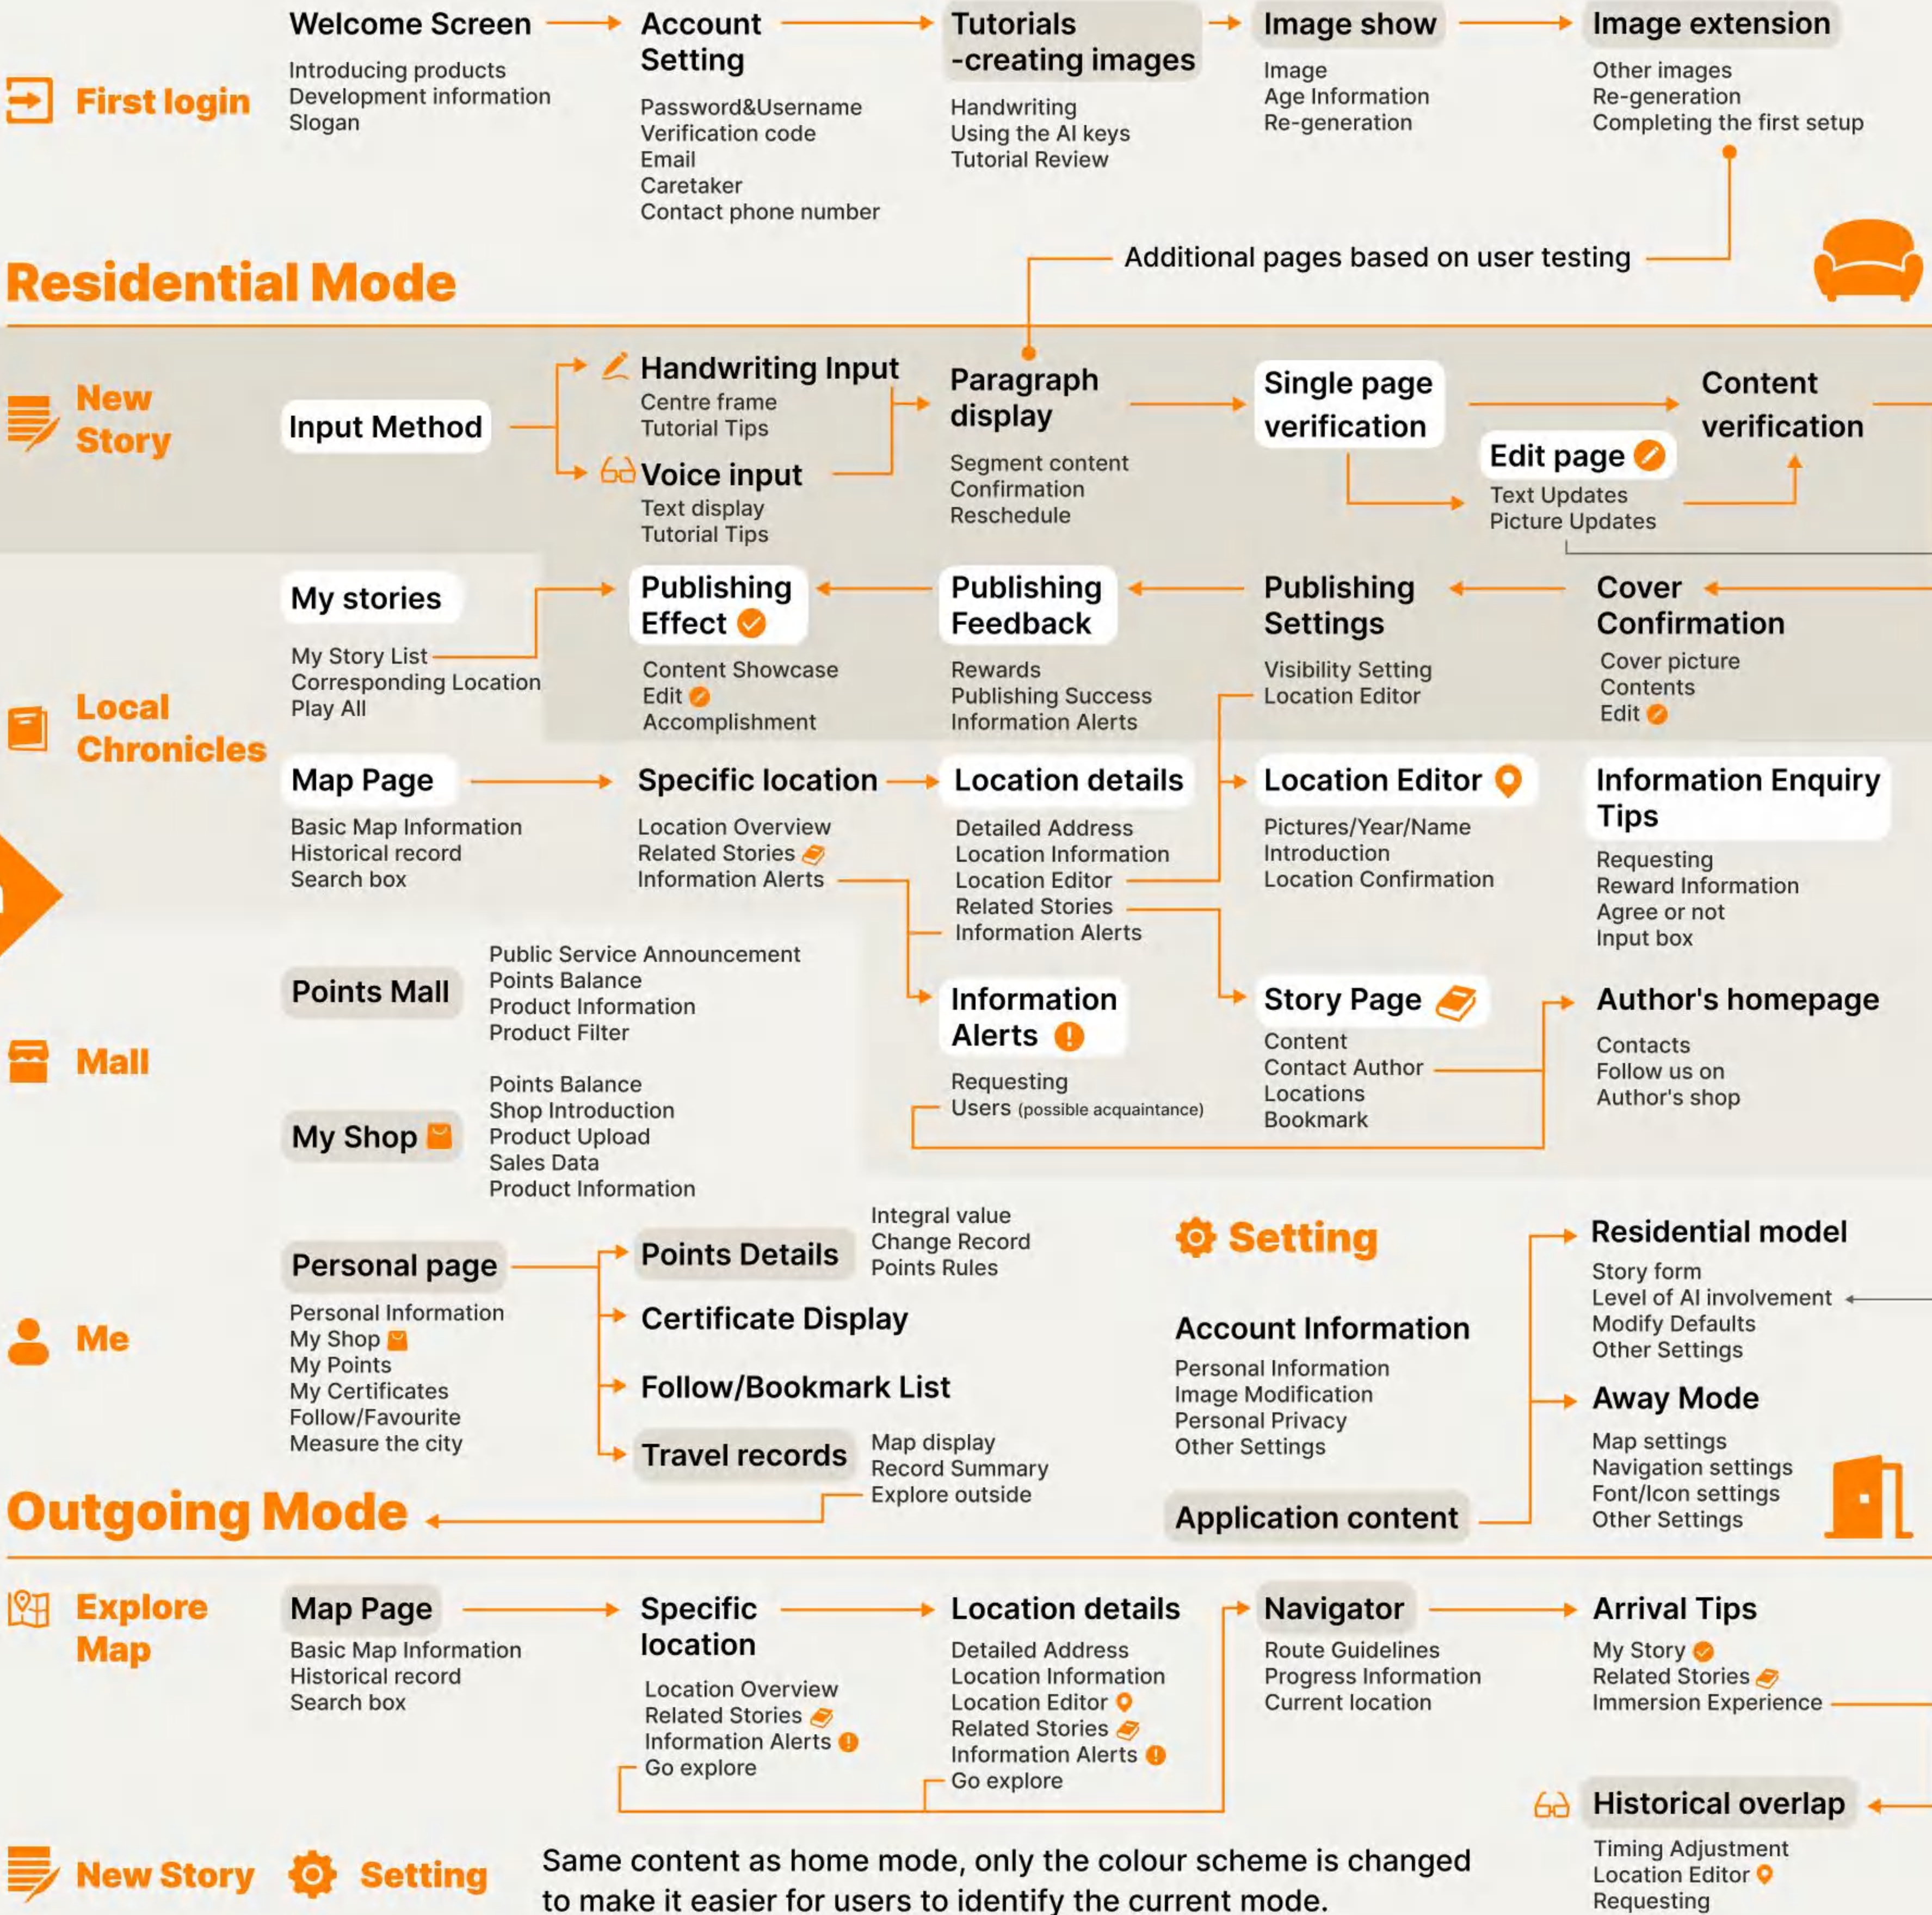

Hardware Products List

- 01 Pen (Handle)
- 02 Electronic handwriting book
- 03 AR glasses
- 04 Storage box

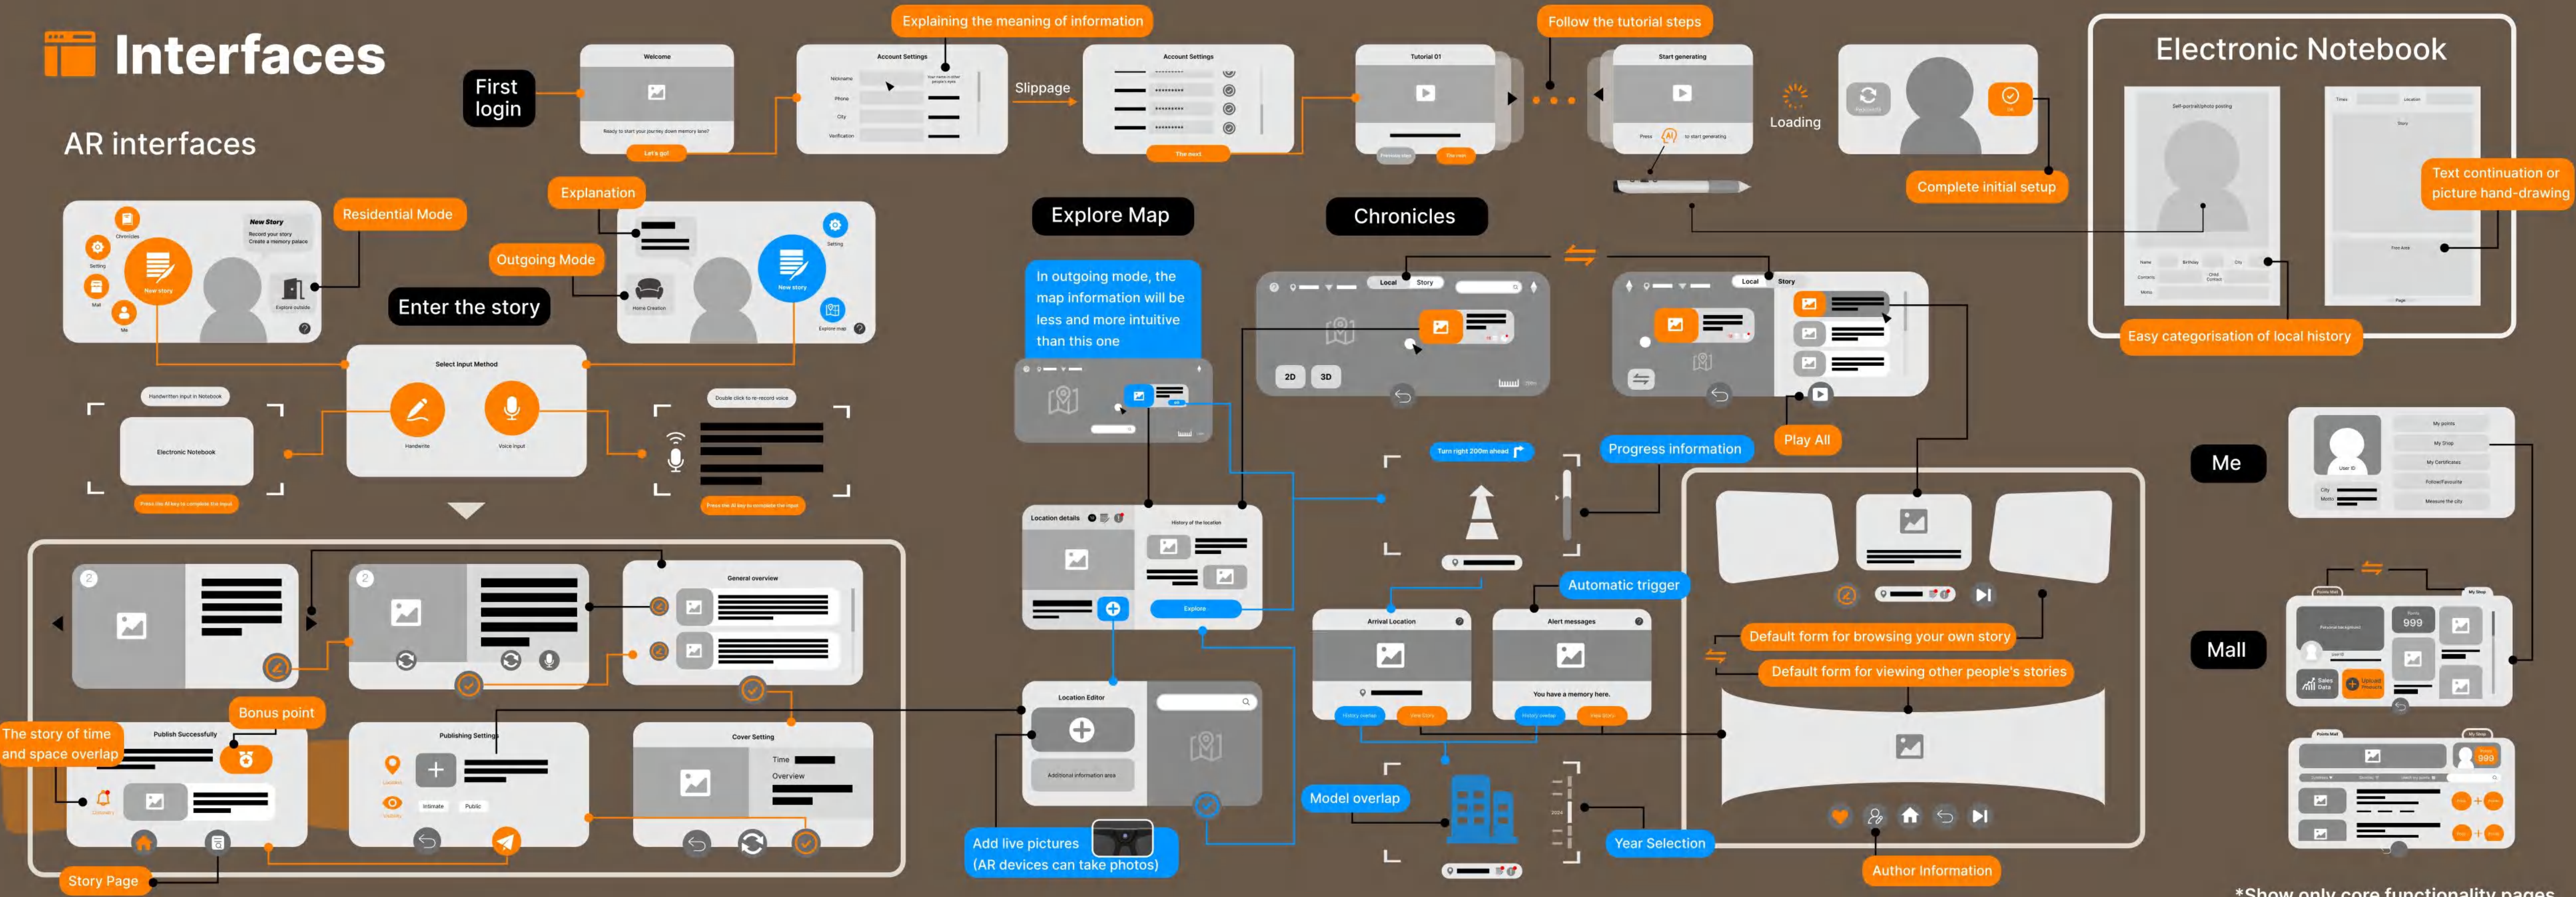

UI Framework

*Note: Since some of the links between the function blocks will cause overlapping, which will lead to logical confusion, the same icon will be used as a link in this case.

Interfaces

AR interfaces

Develop norms

Principle

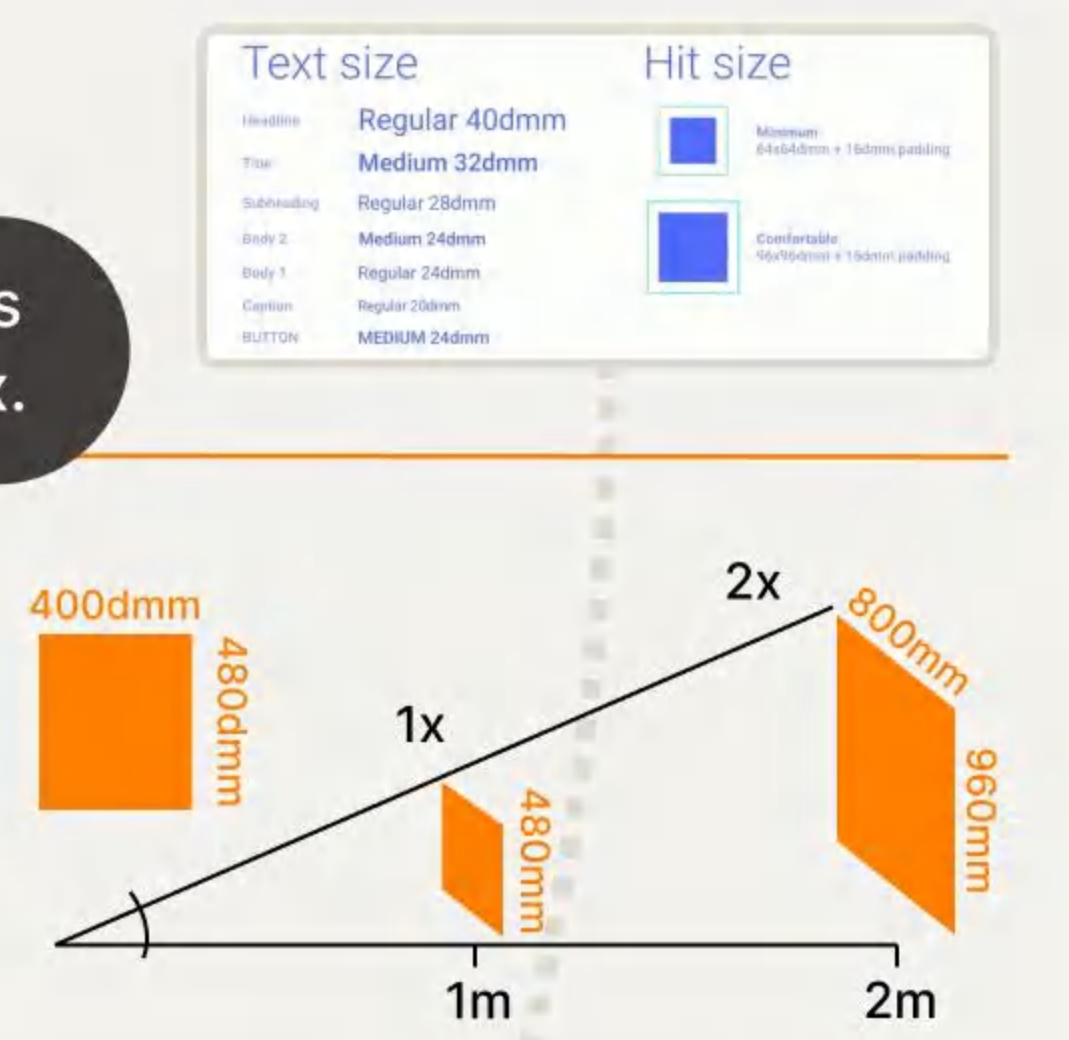

dmm

Distance-Independent Millimeter

The Meta team developed the 'dmm' concept, which forms the underlying specification for the UI design of XR products.

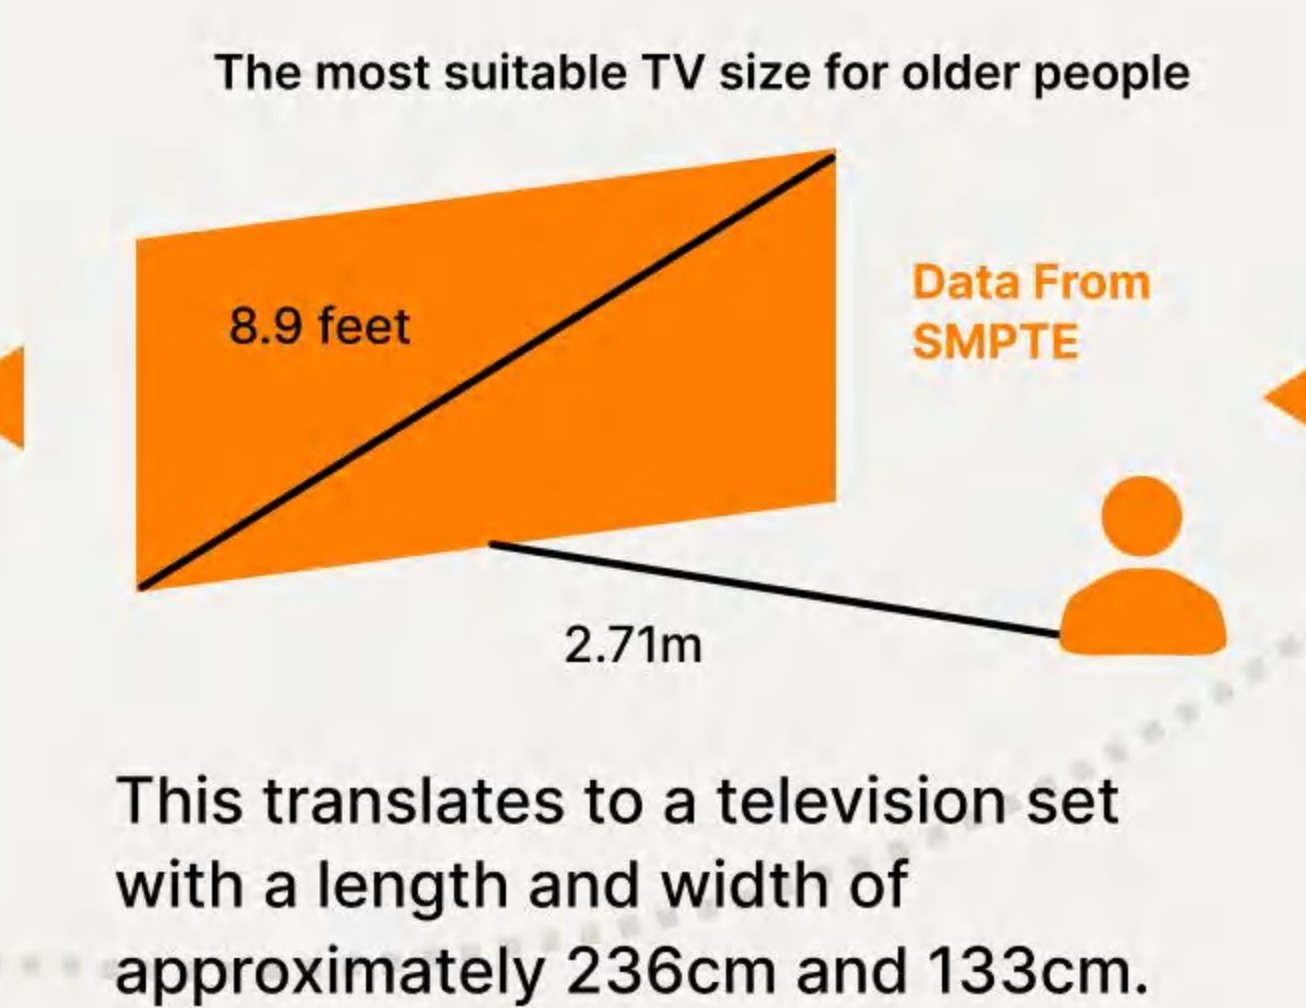

Both of the above cases correspond to 1dmm, which allows for consistency of content across different distances and screen sizes.

The same principle applies when expanding to the screen.

- ### Workflow
- Test the most suitable screen distance
 - Extrapolation of interface size by combining the dmm principle and known TV data
 - Test the smallest acceptable text size and icon size
- *Combined with Meta recommended sizes

Simulation- Key to Victory

- Interaction Design
- Product Design
- User experience

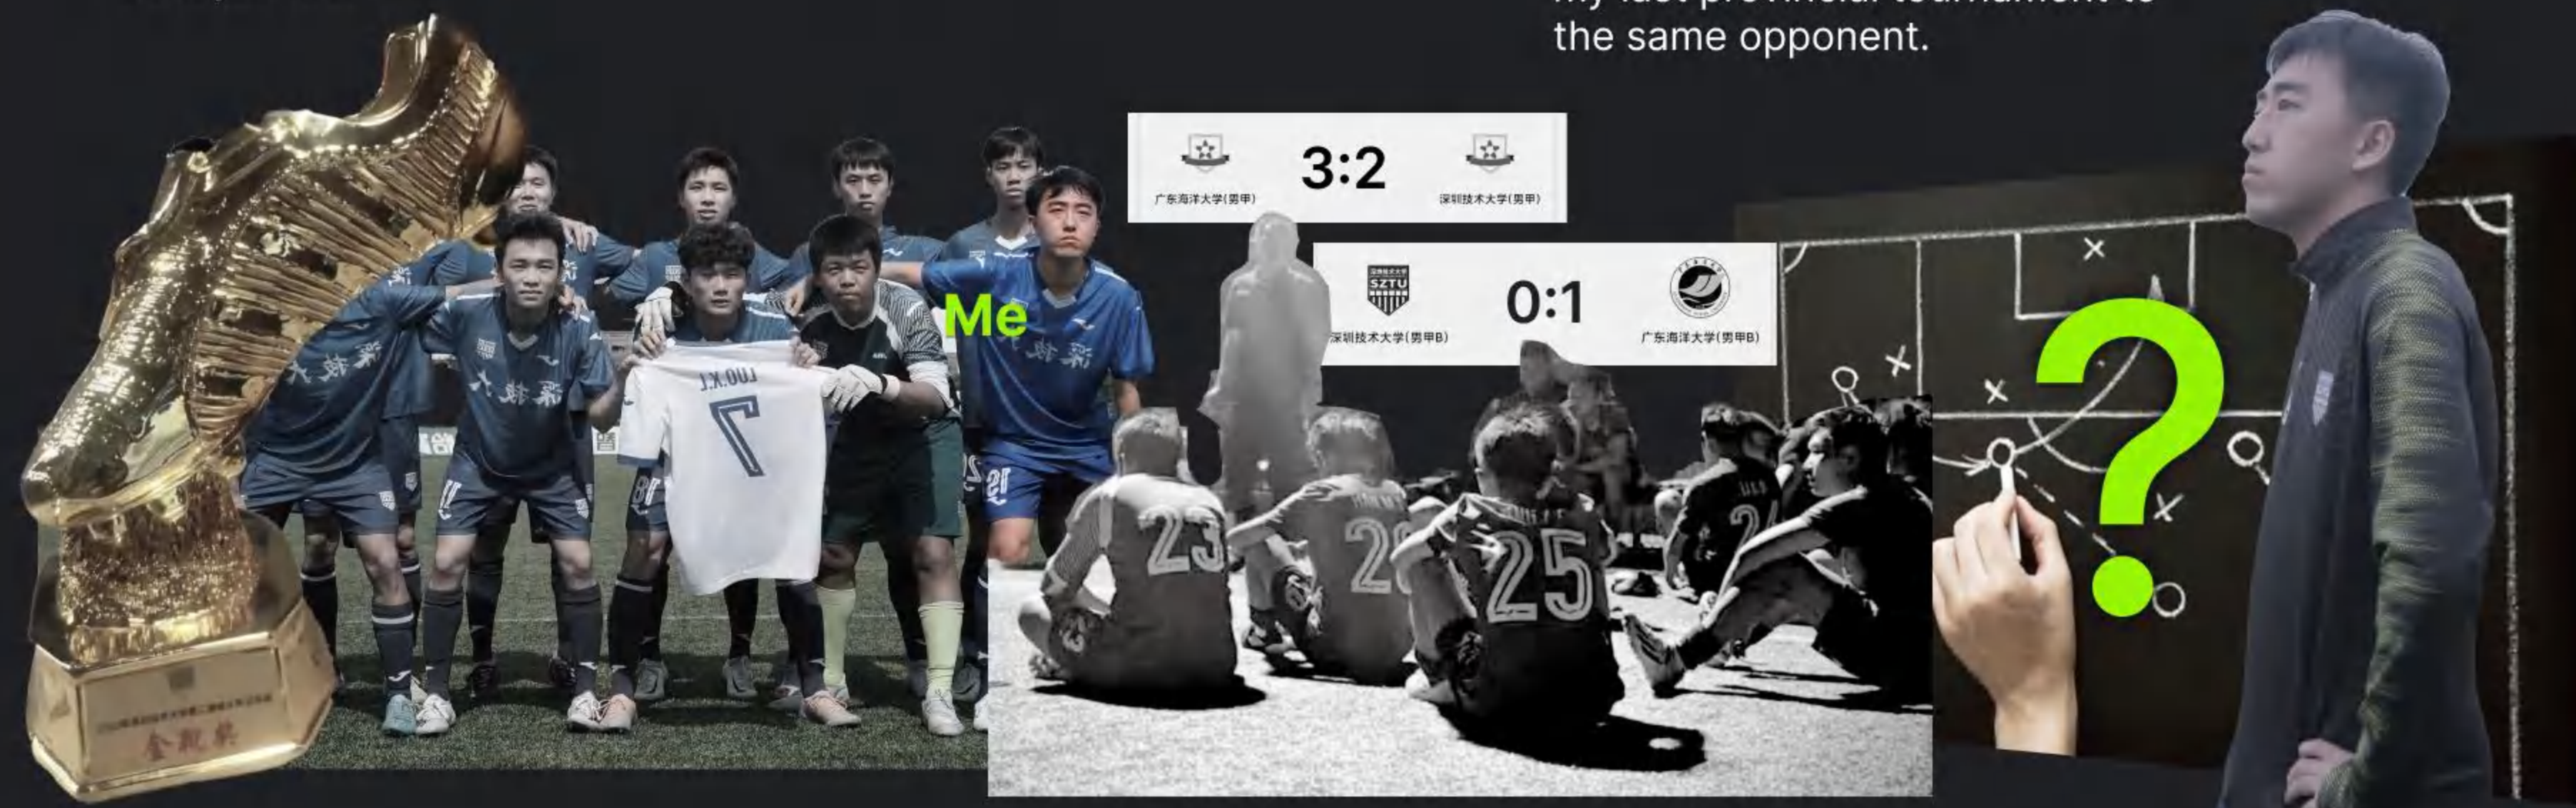

A key loss during my school team career drove me to investigate its cause. Surprisingly, our opponents trained less than we did, suggesting a key to improving efficiency. Interviews revealed simulation training as a powerful tool, inspiring me to analyze its elements and innovate.

Using Harris chart analysis, I designed a tiered-response electronic headband that alerts players to on-field scenarios, boosting mental resilience and reaction speed while tailoring training for different positions.

Inspiration

- I In my freshman year, winning the Golden Boot award in the freshman game, I made the varsity team.
- II I have participated in various competitions at provincial and municipal levels with the school team.
- III A couple of heartbreaking losses in key tournaments, particularly my last provincial tournament to the same opponent.
- IV I'd like to know what exactly causes people to underperform in key games.

- My group is a general student group (no professional training experience)
- There's not much difference in the level of either the players or the coaches.
- I think they may have had more practice time together and so performed better.
- Surprisingly I've found a couple of strong teams that train less than we do.

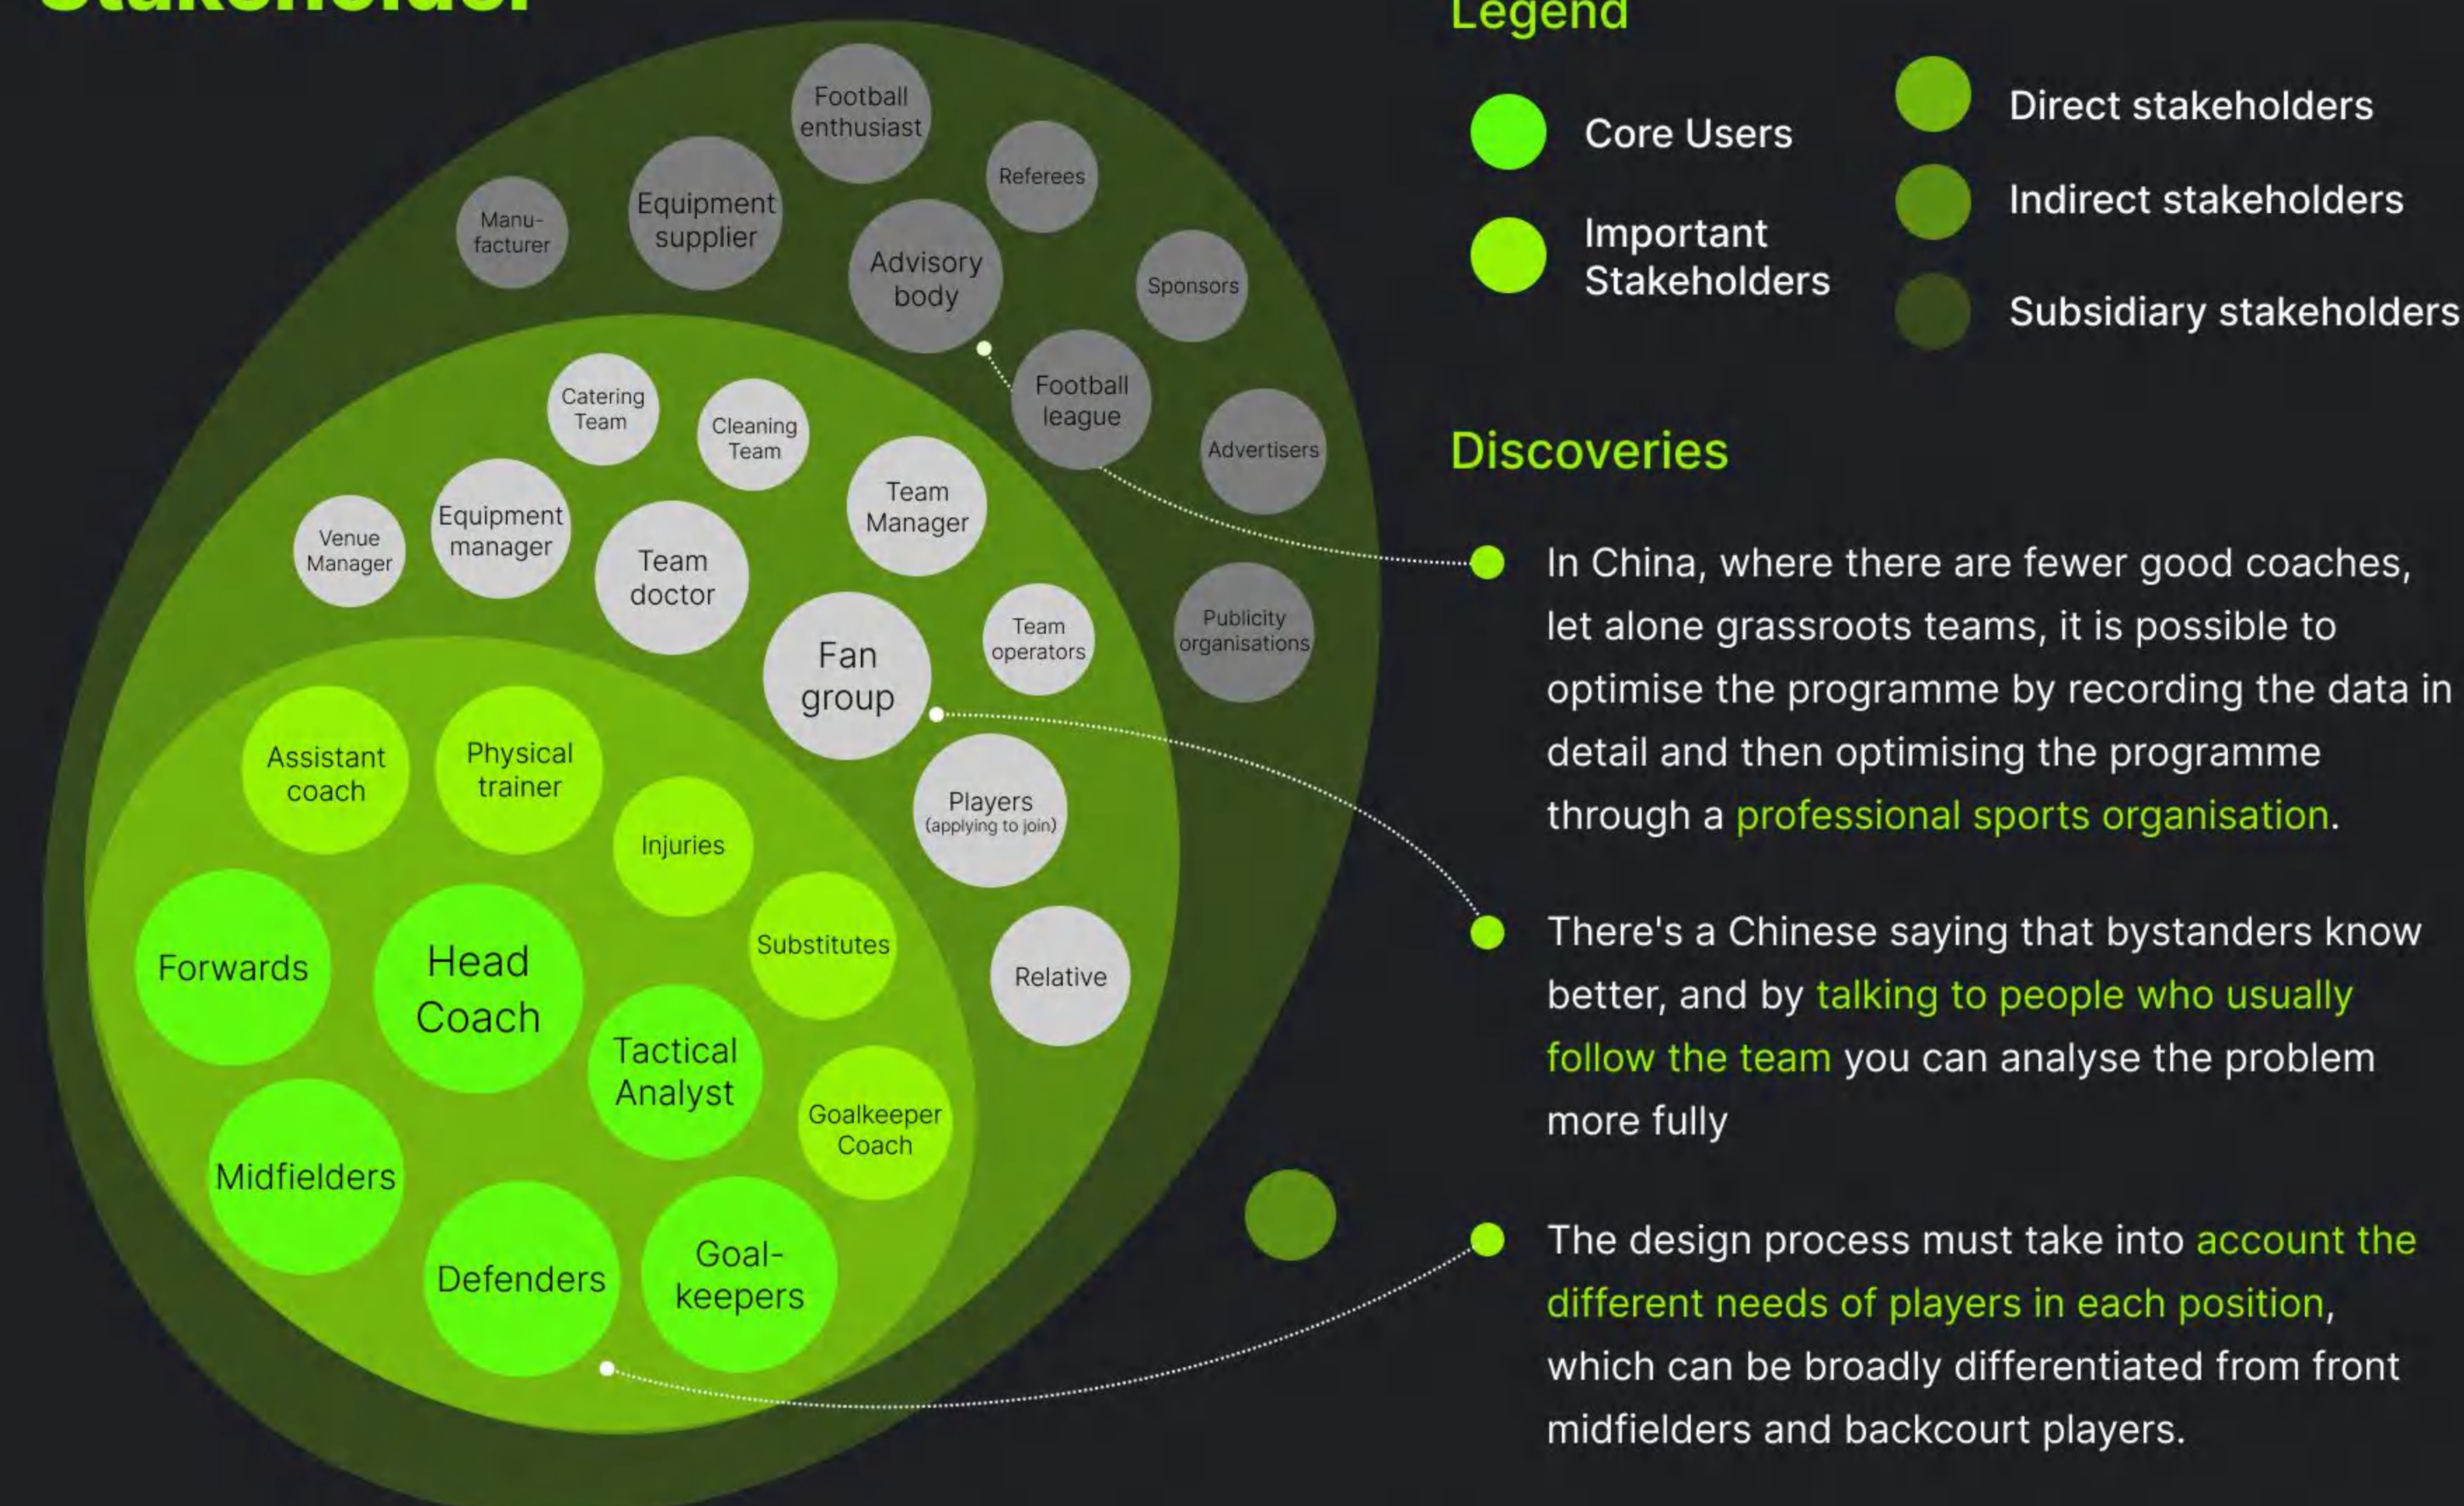

What are the key factors that balance the scales?

Research

Primary research is primary, secondary research is supportive

Stakeholder

User Interviews

What do you think is the problem with the current team's training inefficiencies?

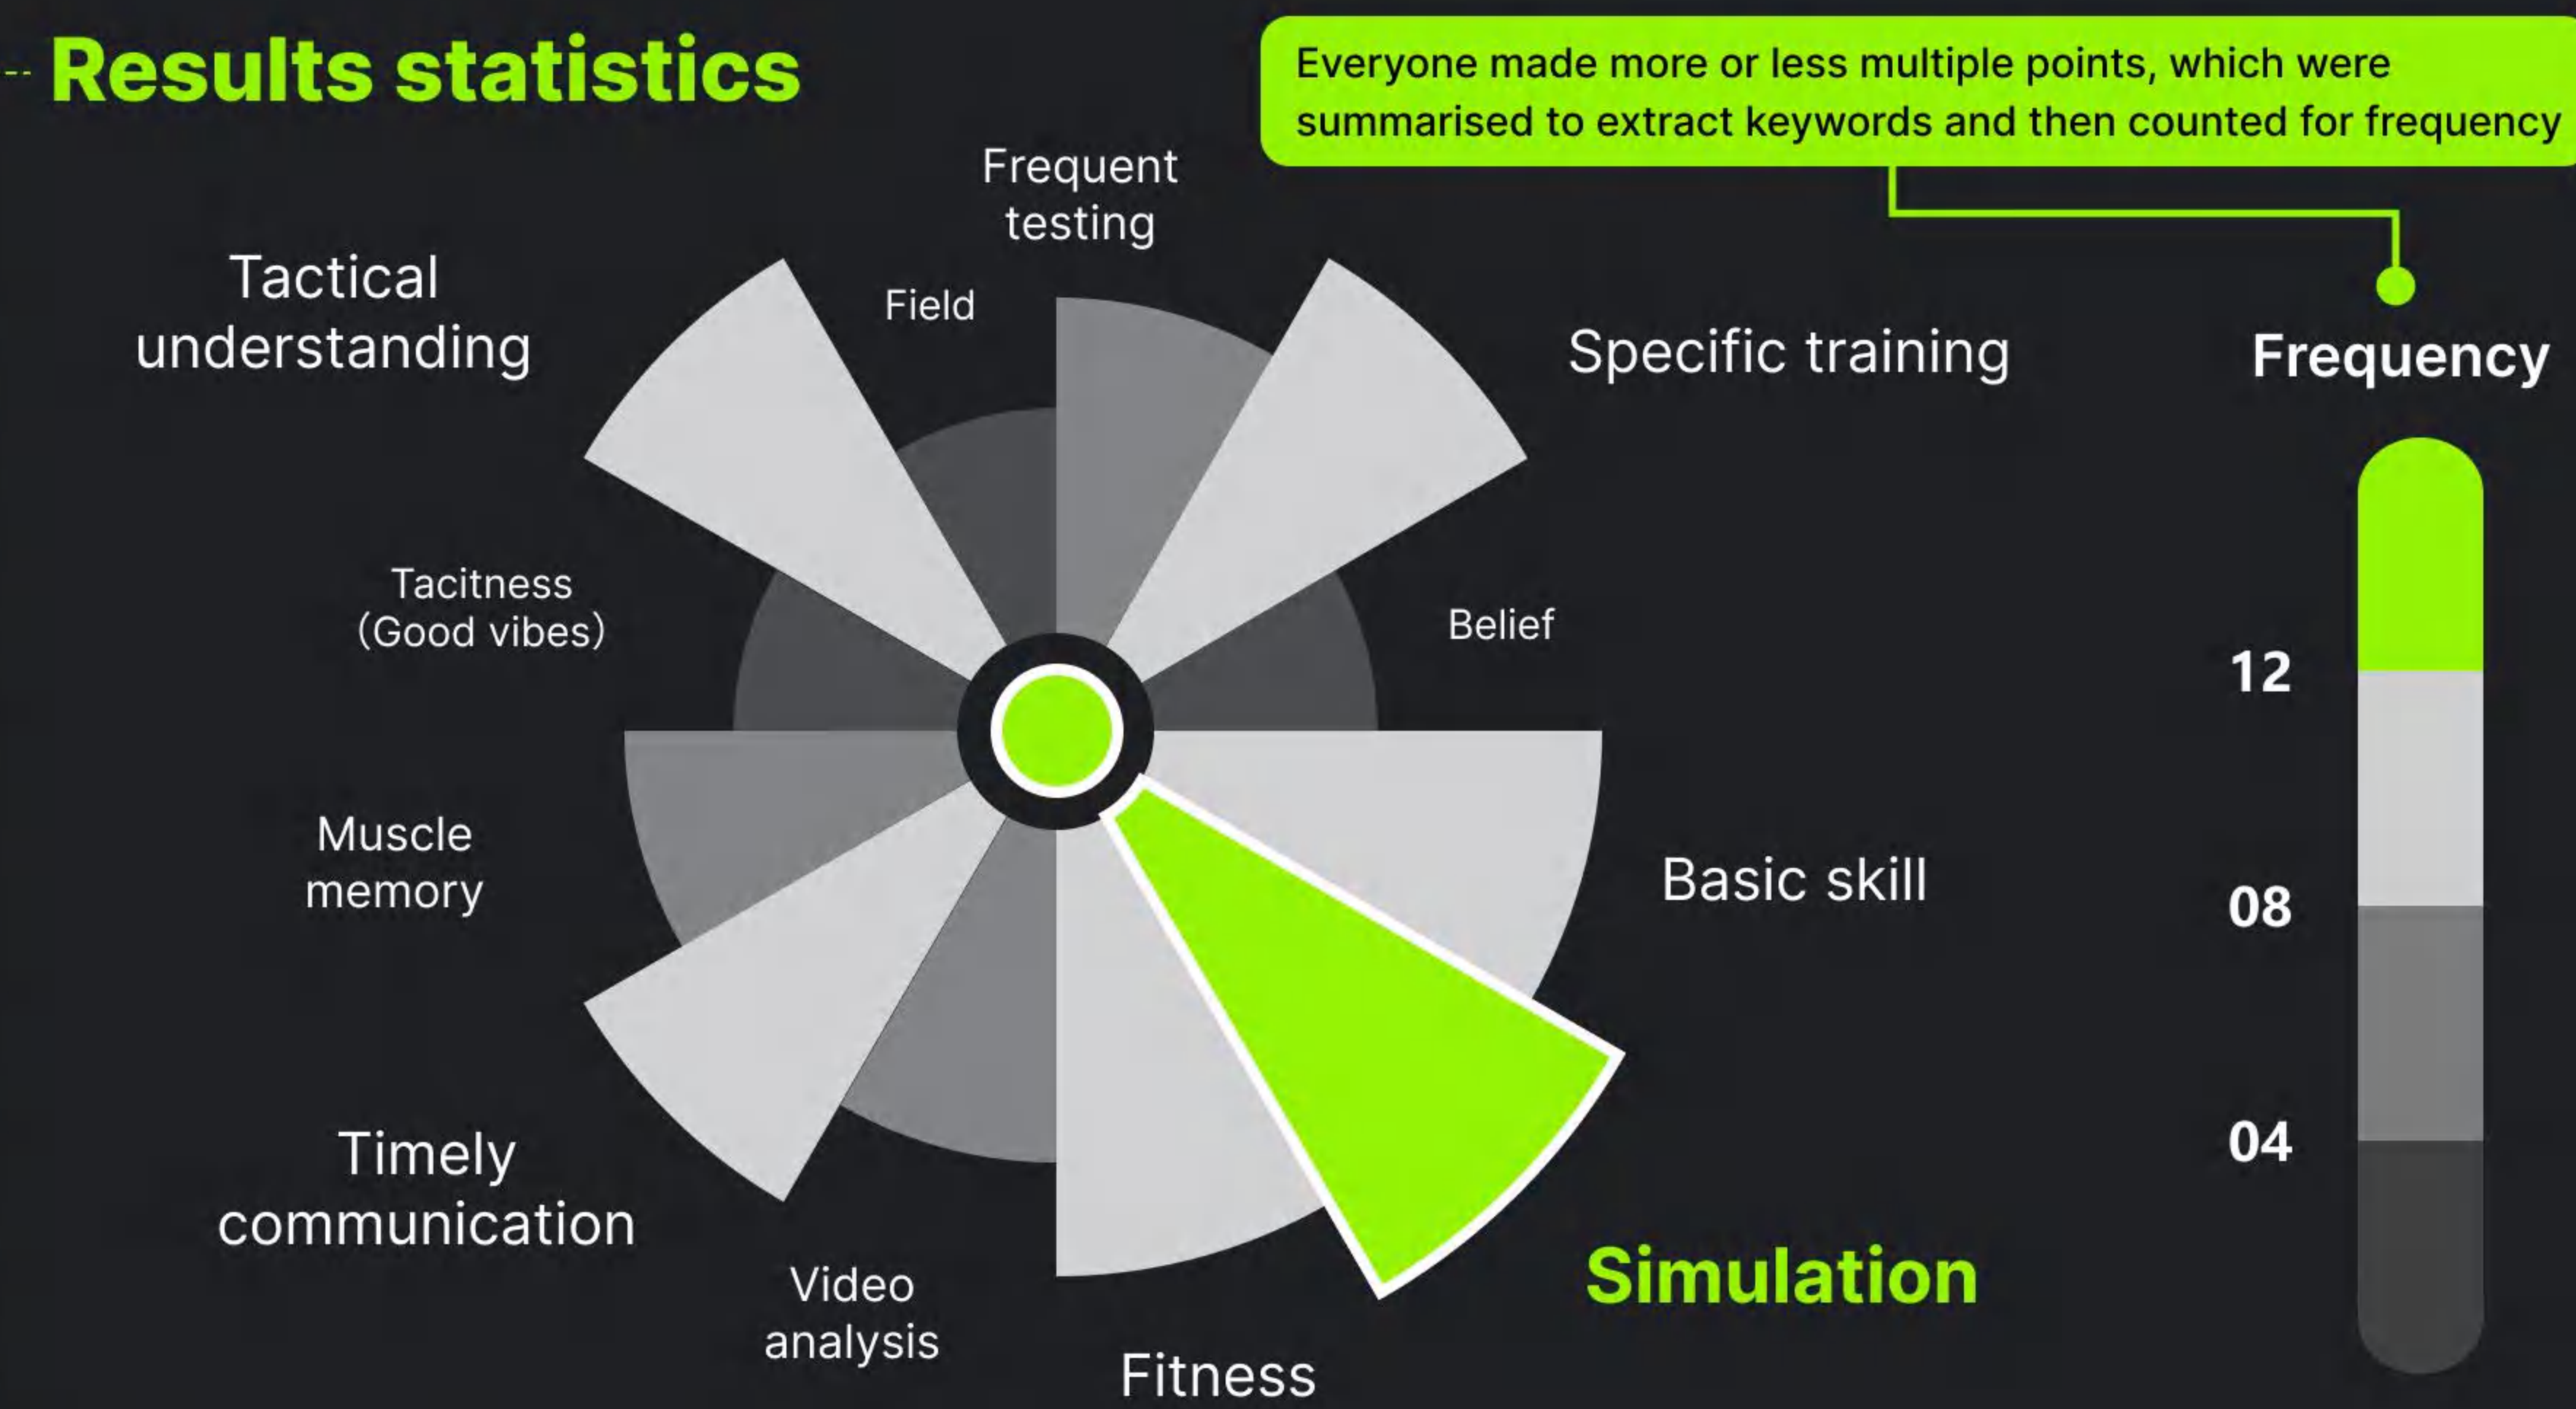

Which training do you feel has been effective in improving your performance during a race?

For players and coaches

For fans and staff member

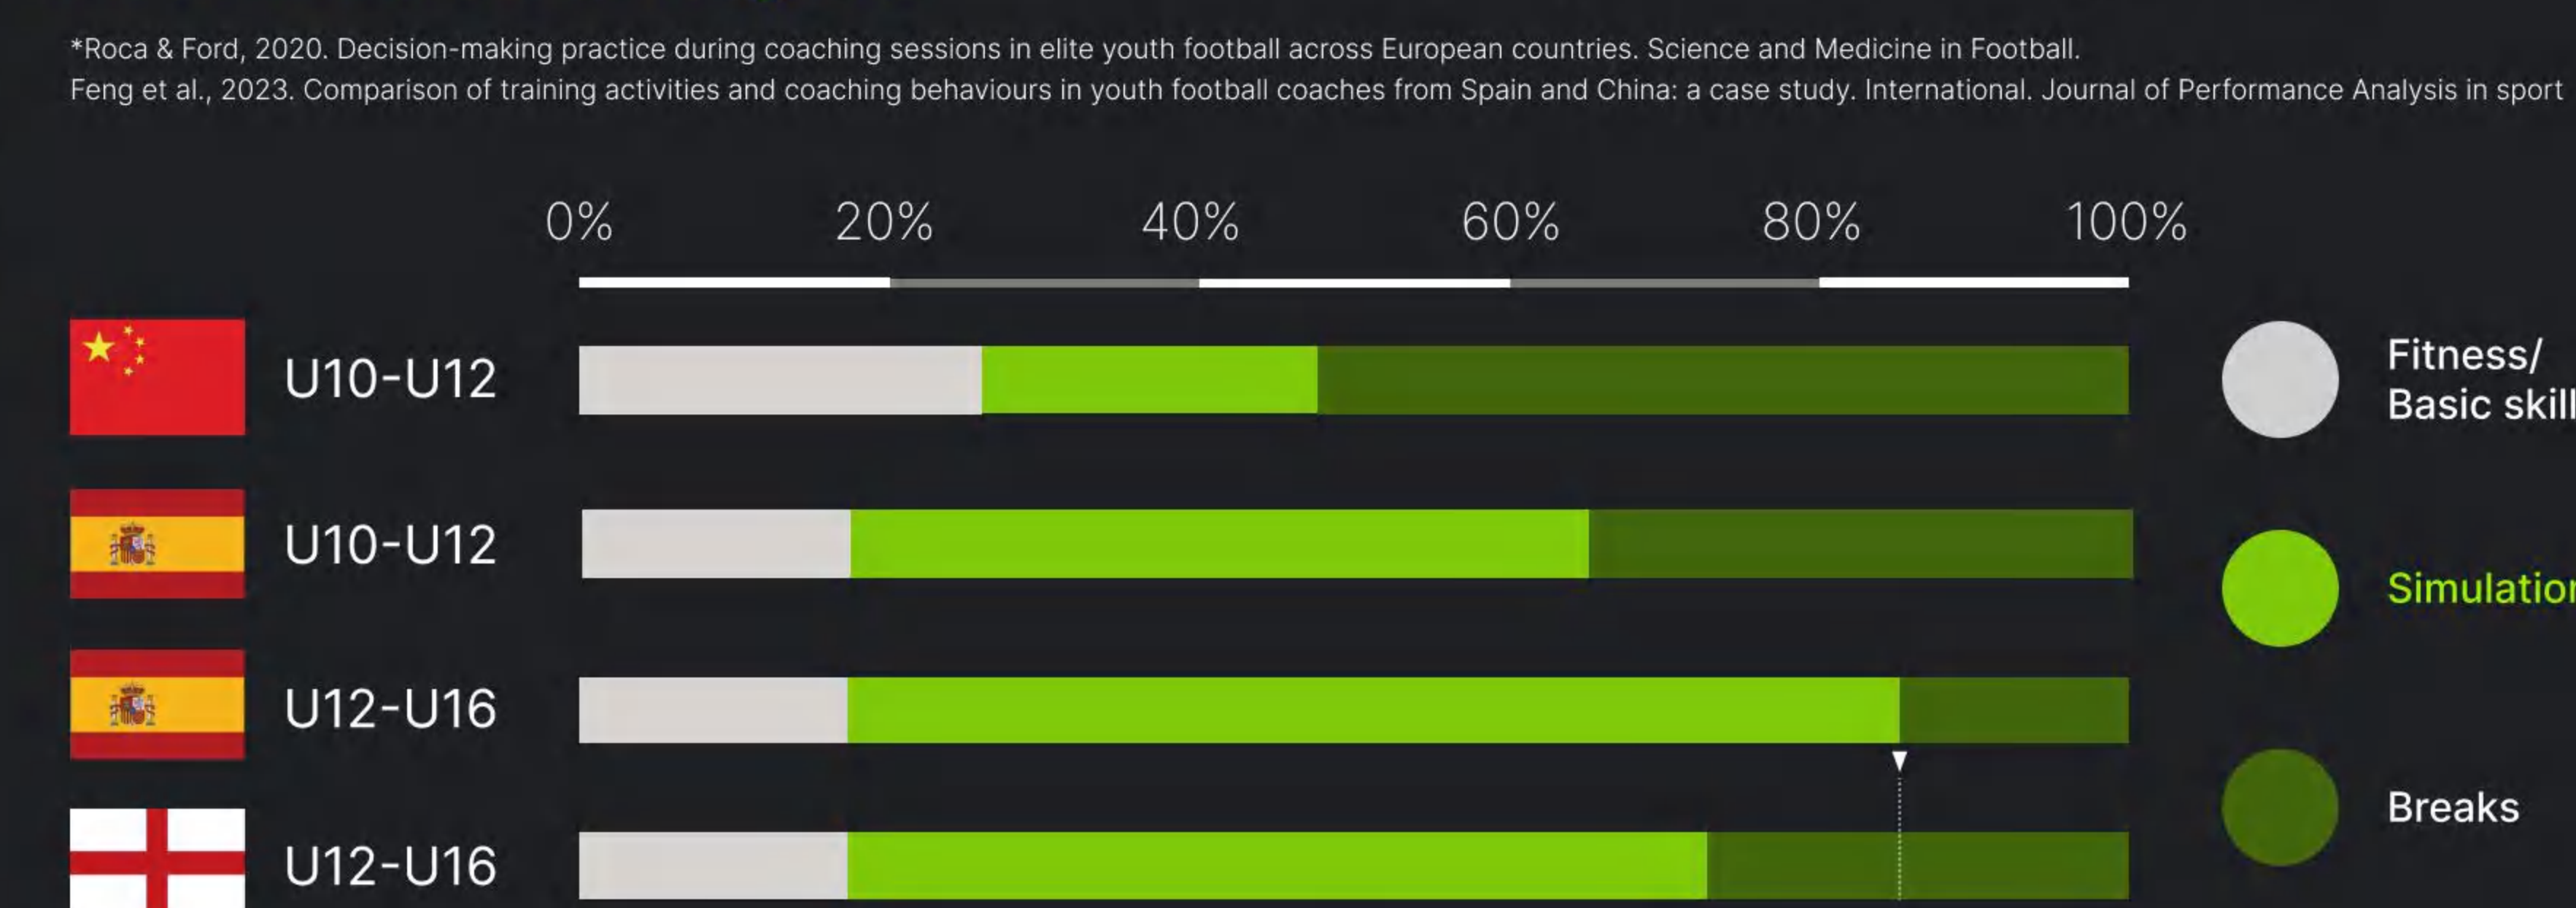

Through observation and knowledge, which part of the training do you think is the most important?

Results statistics

Information analysis

*The structure of elite youth football training sessions

The comparison reveals the importance football powerhouses place on simulation training, which to some extent supports our interview findings.

These two teams just happened to be the opposing sides in the Euro 24 final, so perhaps a little difference in simulation training as a teenager played a bit of a role

Elemental analysis-simulation

Match scenarios

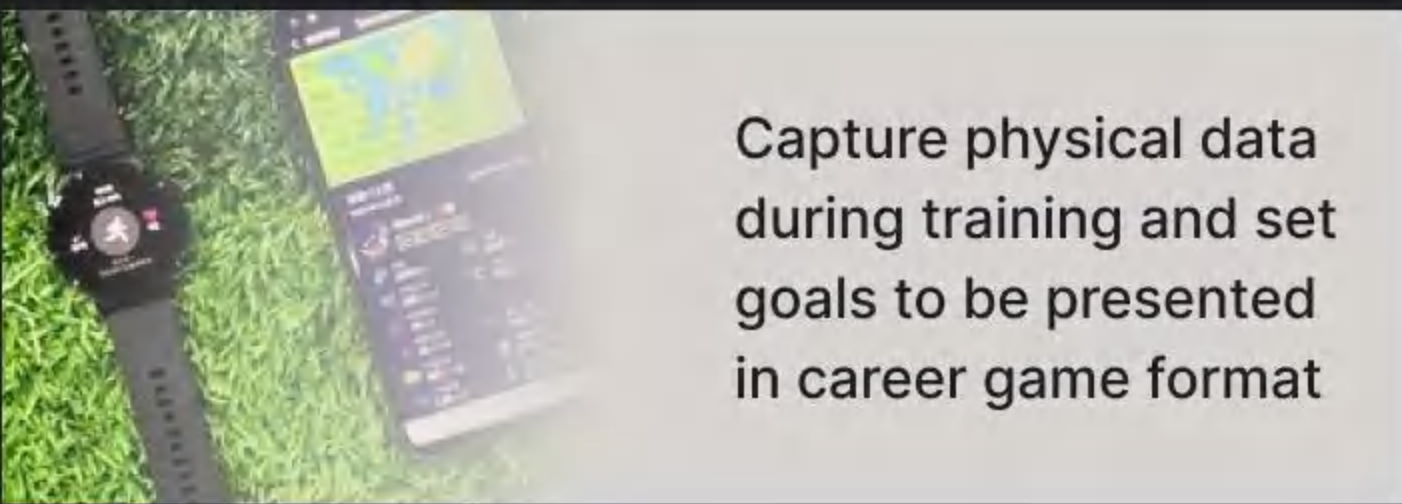

Initial programme

- 1

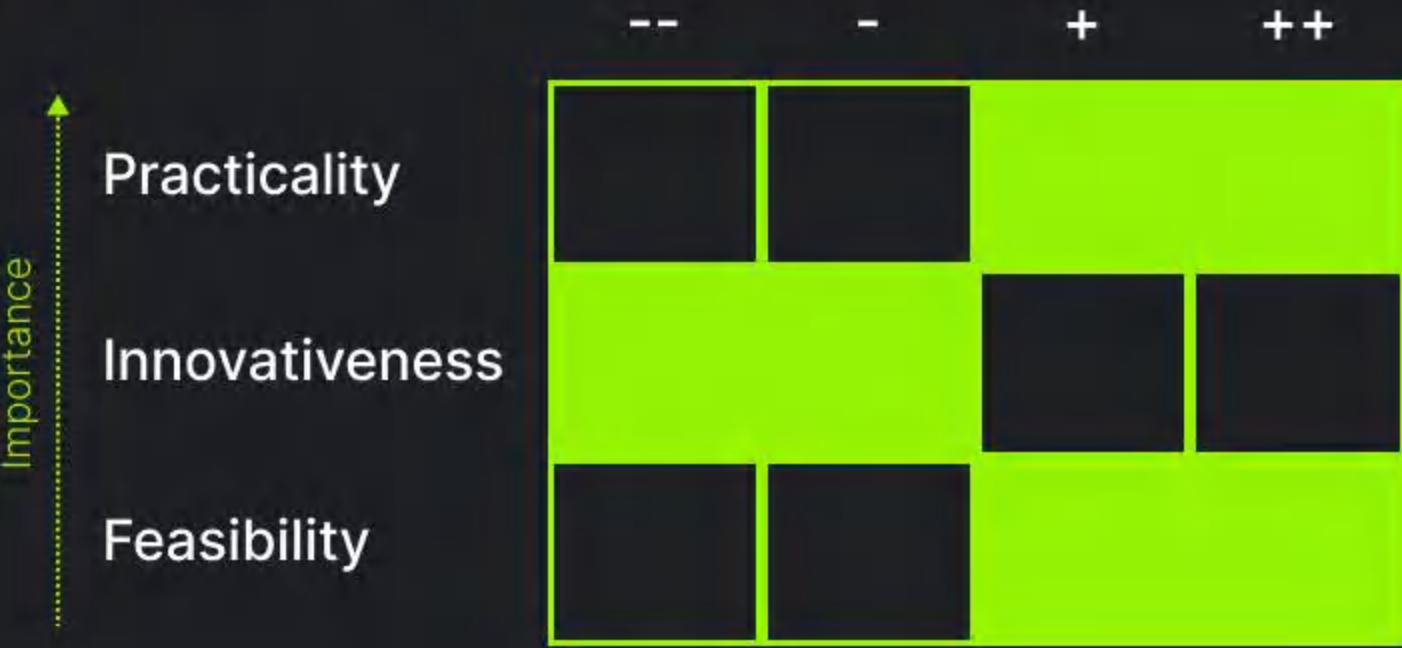

Remove the more subjective elements of 'range of motion' and 'personal superstitions' and extend the programme with the other elements.
- 2

Potential scenarios were analysed using the Harris profile method and the highest scoring scenarios were developed and designed.

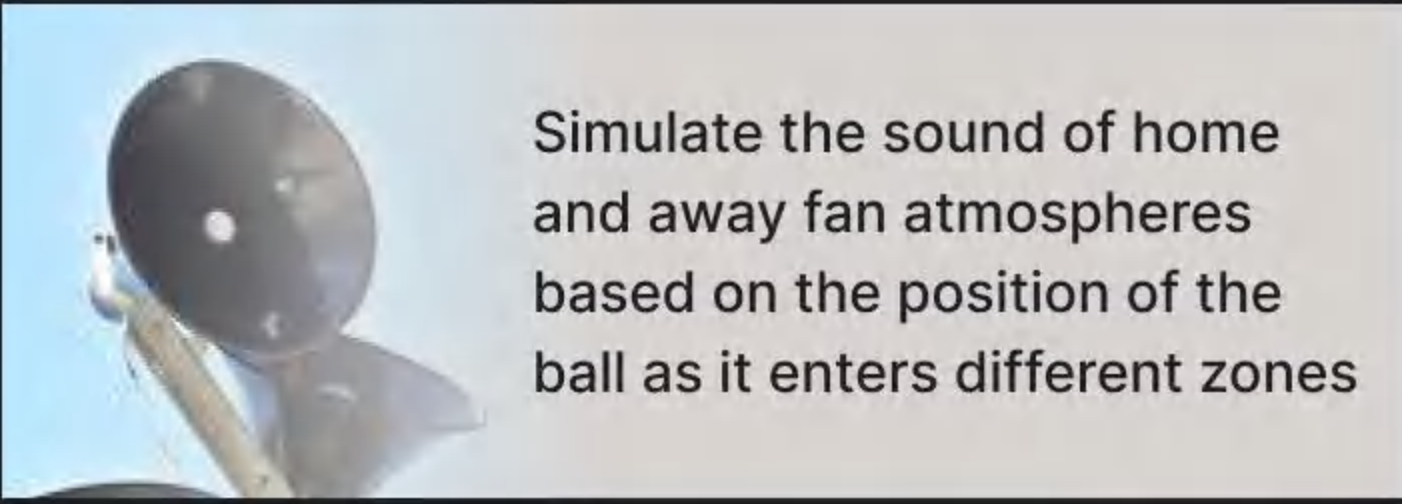

Aims Pursued

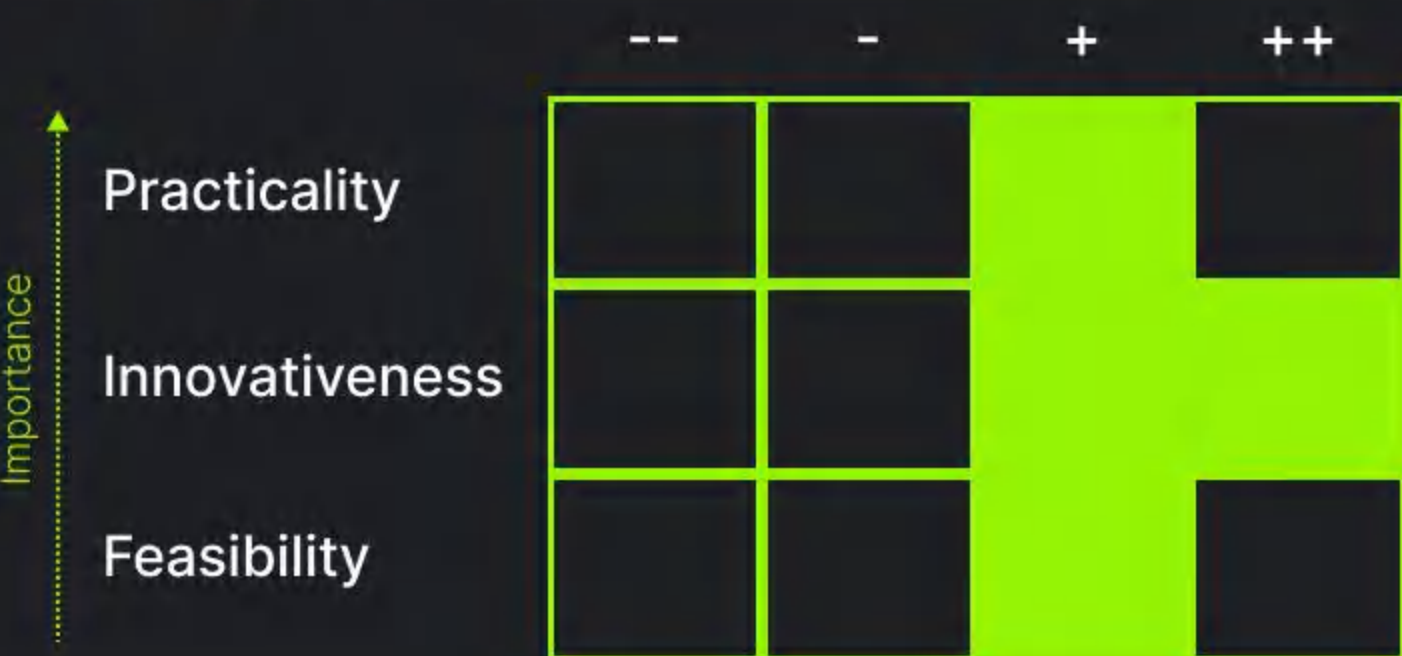

Capture physical data during training and set goals to be presented in career game format

Fan Vibe

Simulate the sound of home and away fan atmospheres based on the position of the ball as it enters different zones

Practicality

Can it be applied consistently without creating new problems

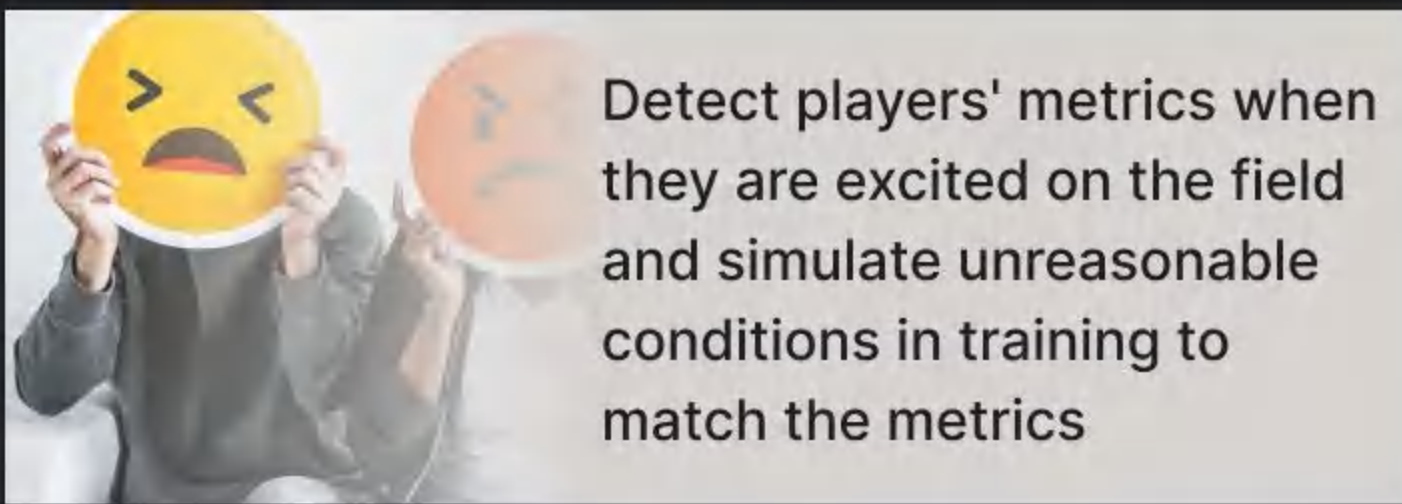

Innovativeness

Whether the programme is innovative and refreshing

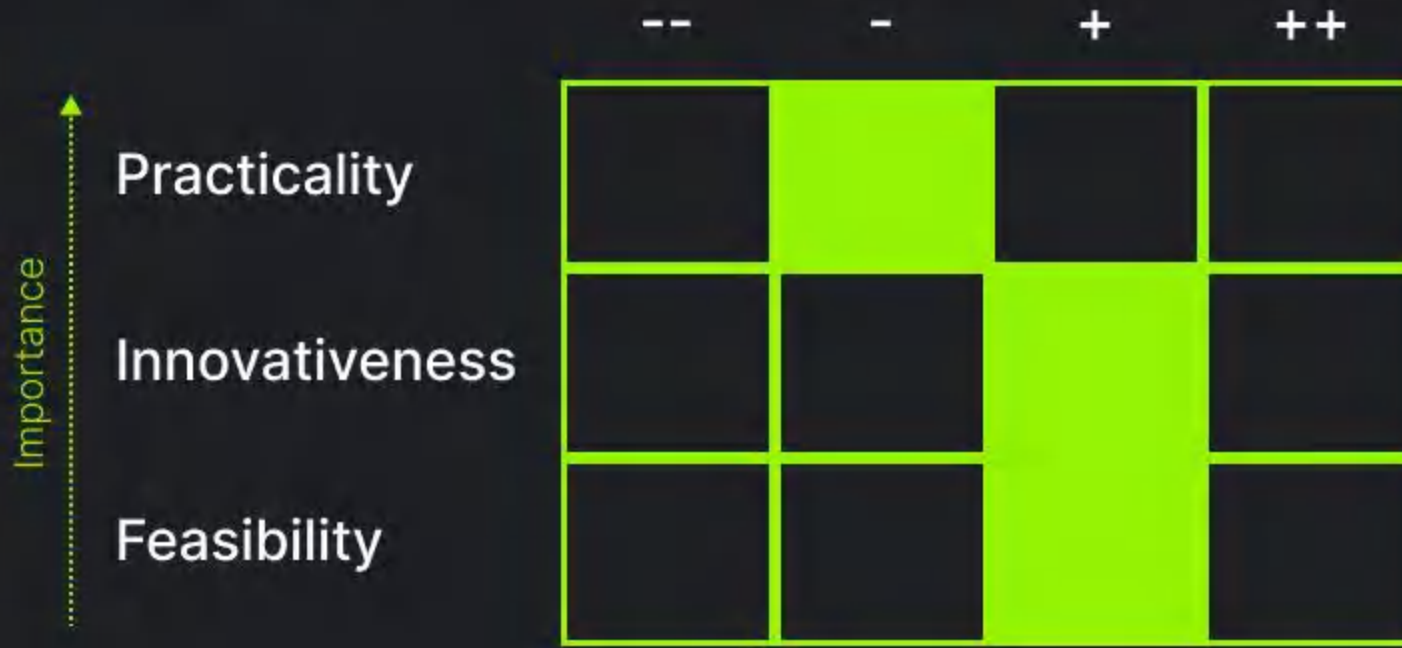

Feasibility

Availability of current technology and complexity of operation

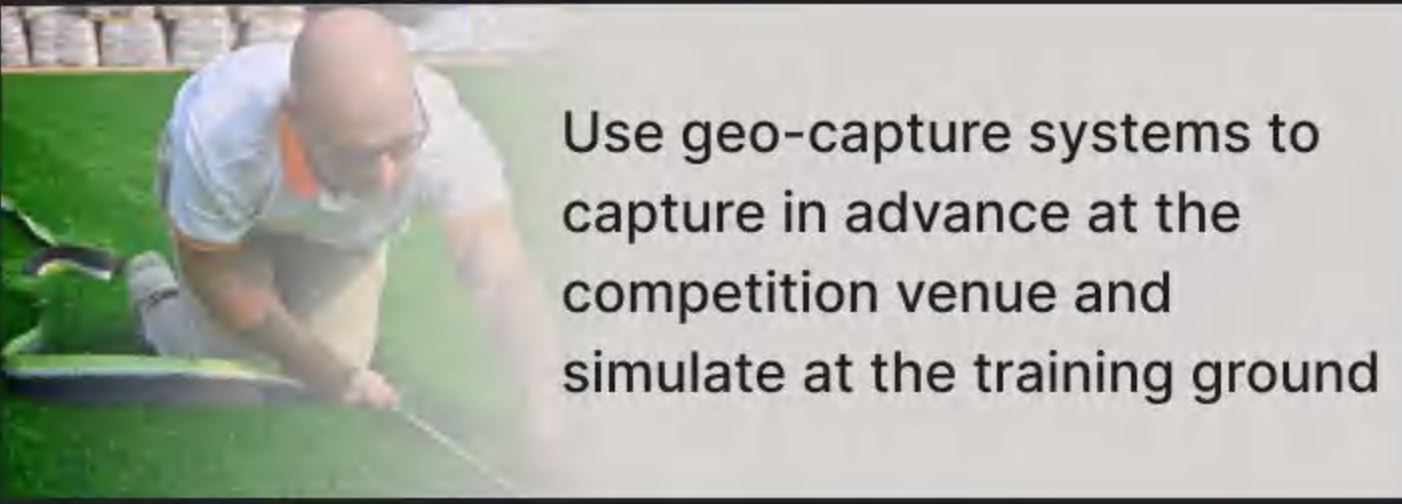

Emotional Condition

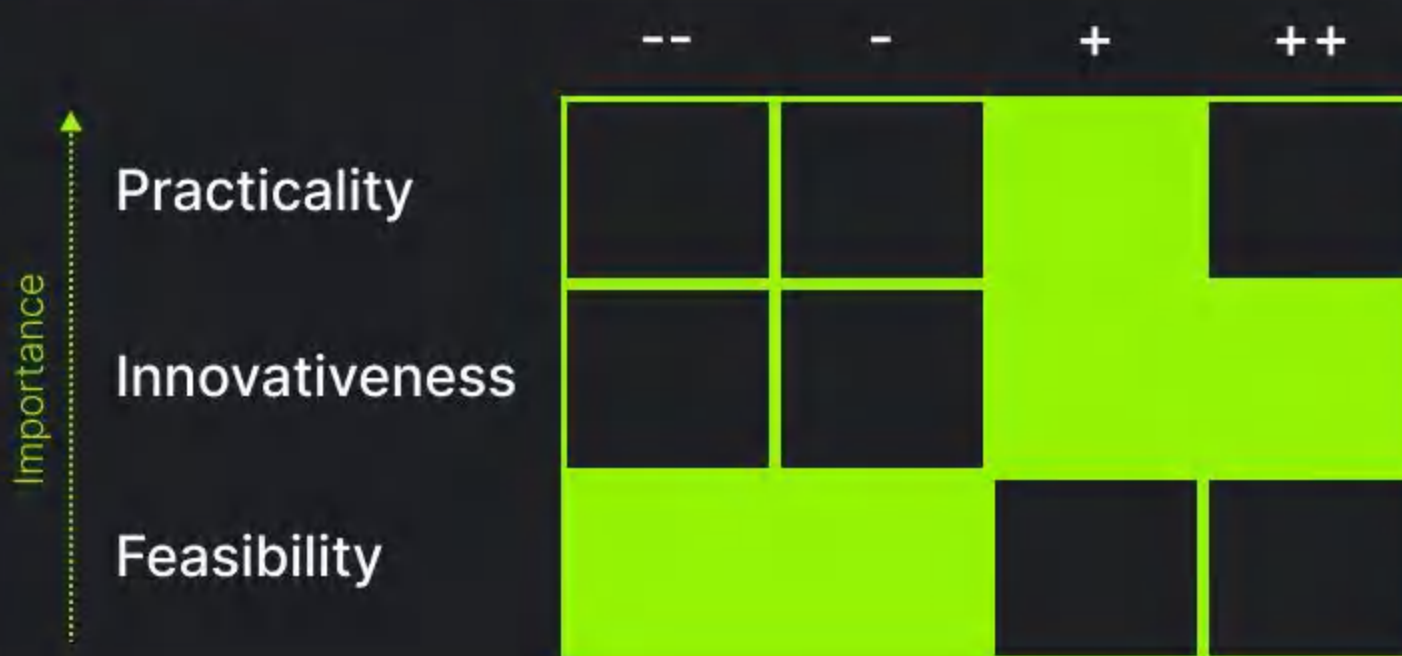

Detect players' metrics when they are excited on the field and simulate unreasonable conditions in training to match the metrics

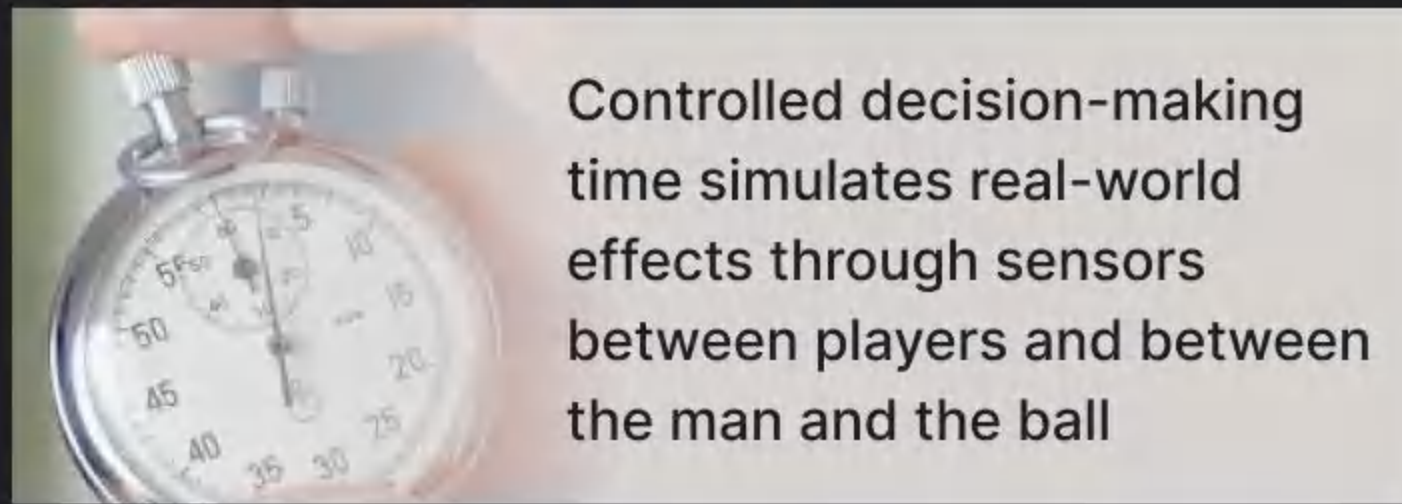

Football field facilities

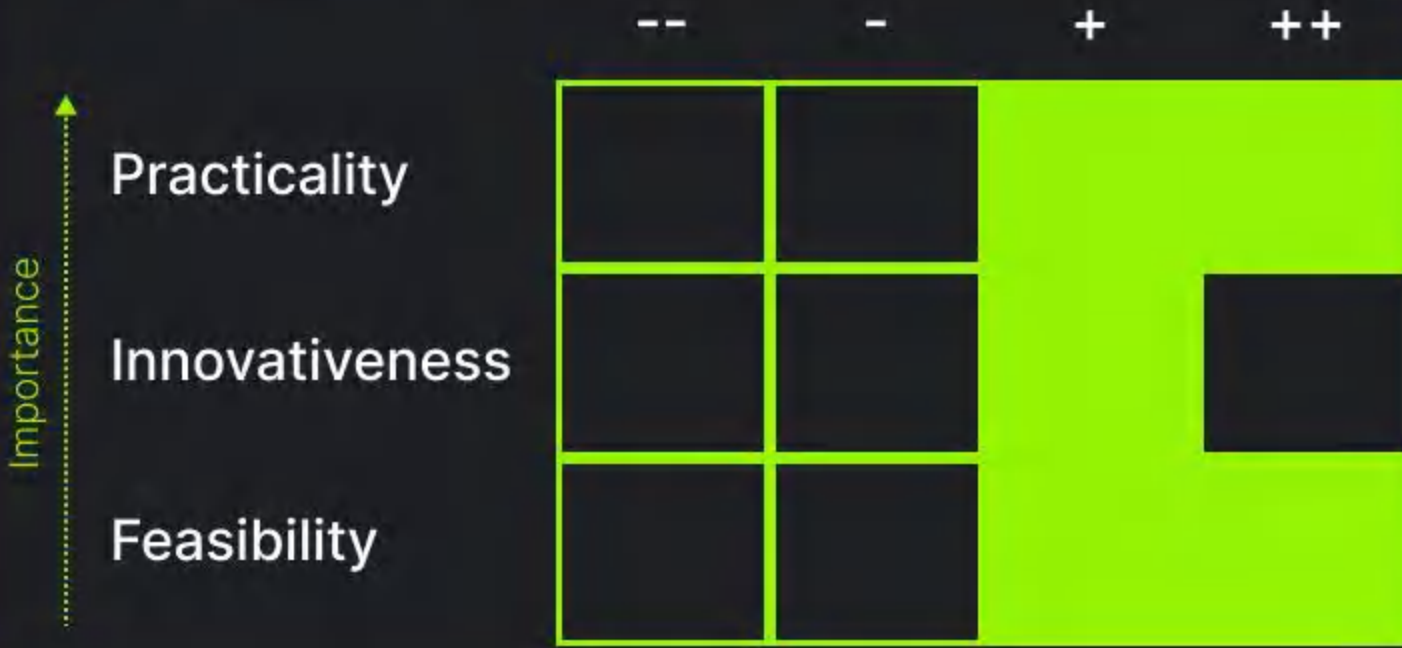

Use geo-capture systems to capture in advance at the competition venue and simulate at the training ground

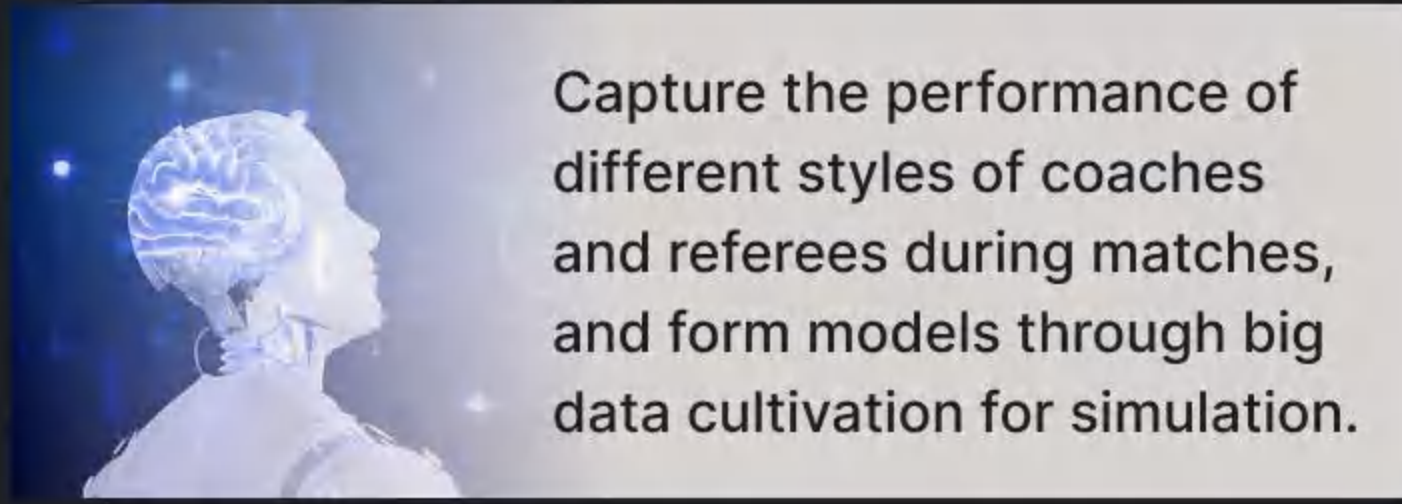

Decision-making time

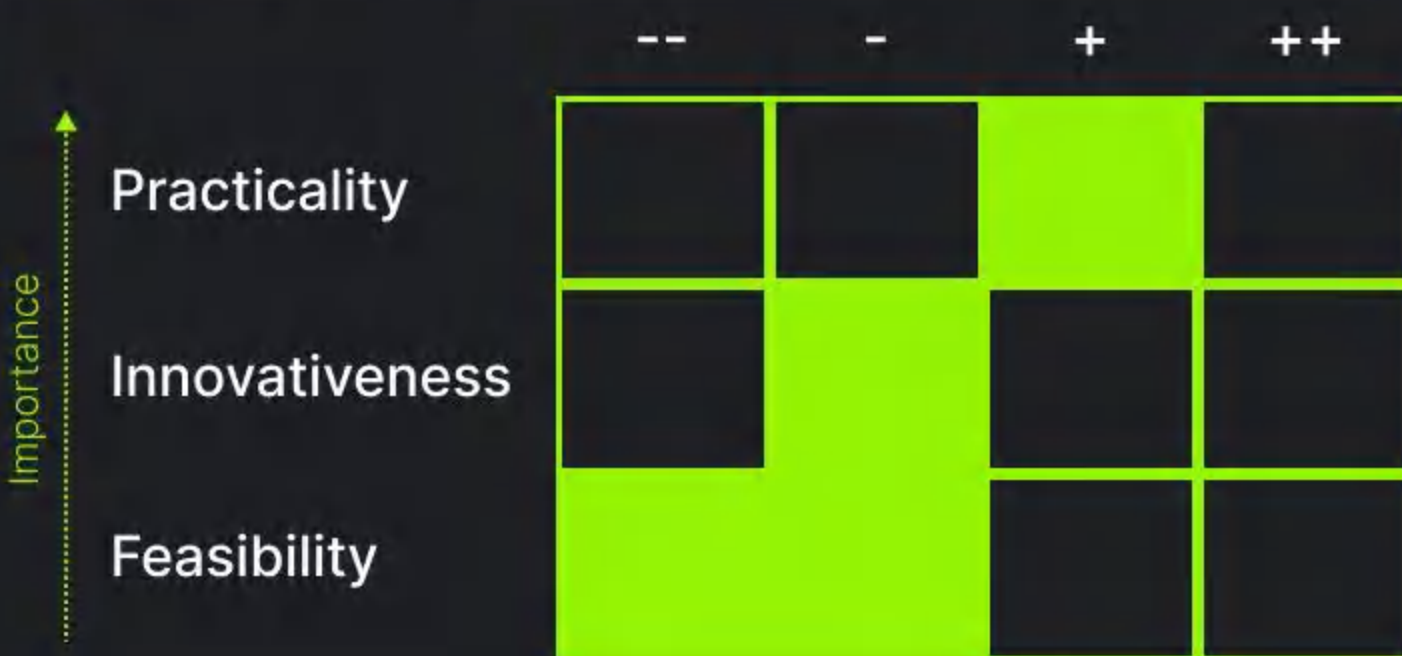

Controlled decision-making time simulates real-world effects through sensors between players and between the man and the ball

Coaches & Referees

Capture the performance of different styles of coaches and referees during matches, and form models through big data cultivation for simulation.

Refinement

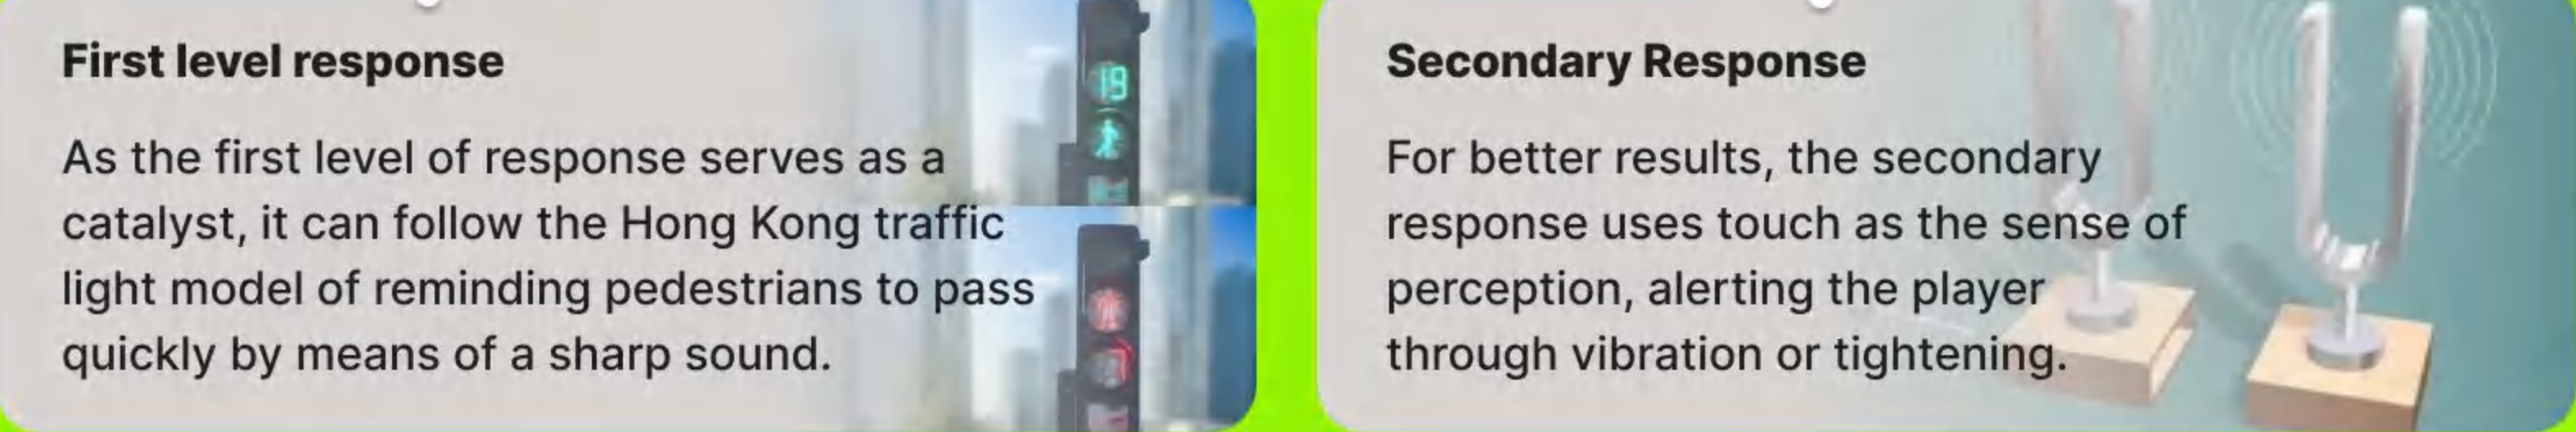

01 Input-Activated Logic

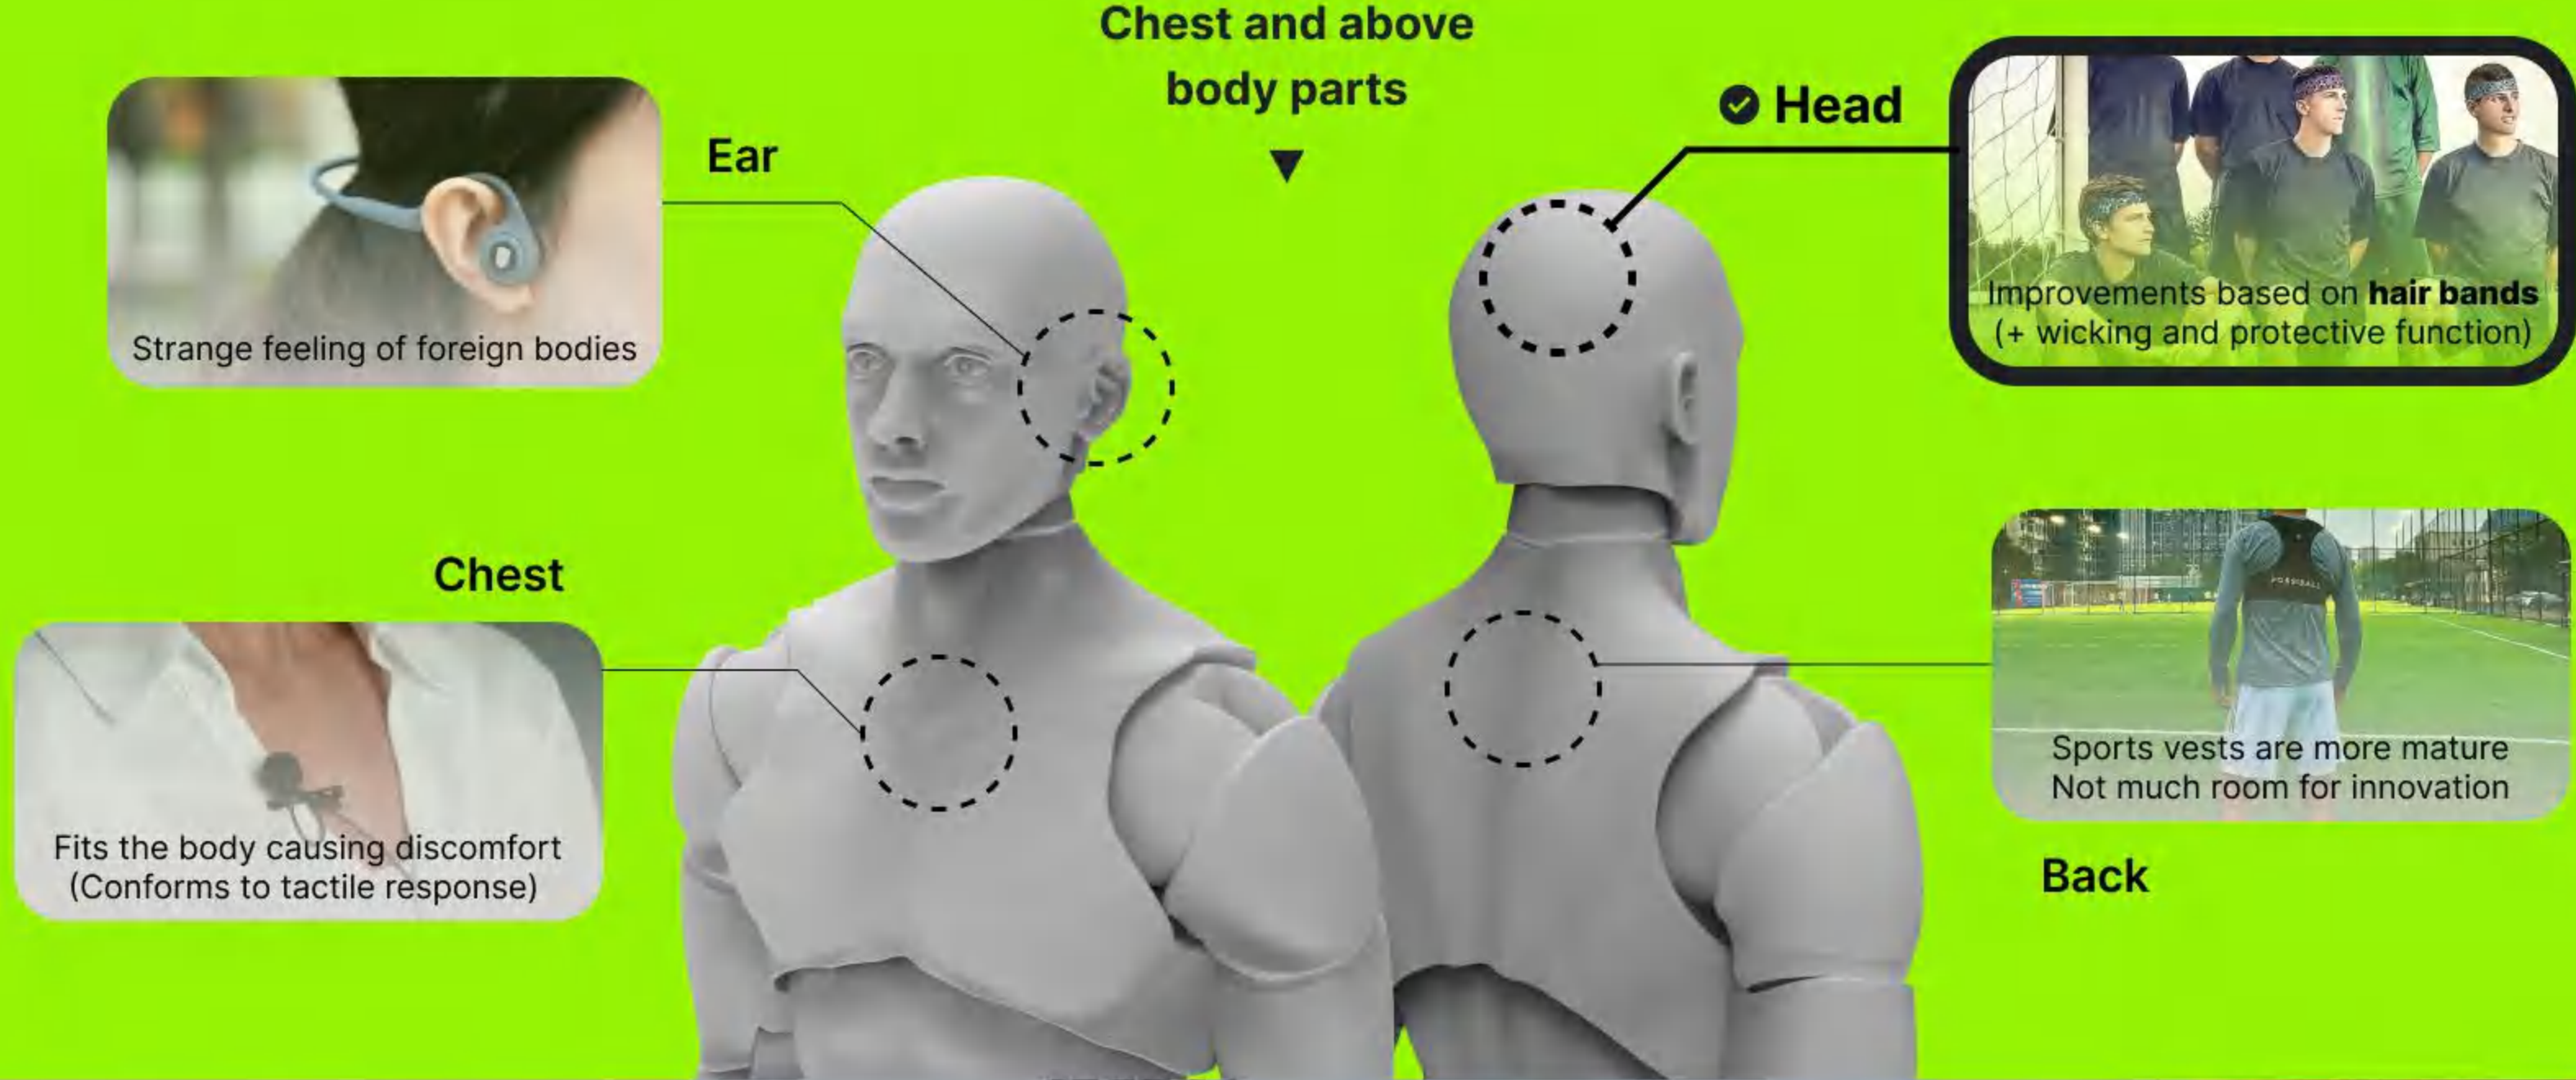

02 Outputs - transmission routes

Based on the motivation logic, the product needs a reminder that can be responded to in a graded manner and can do so quickly and without creating a major obstacle for the player.

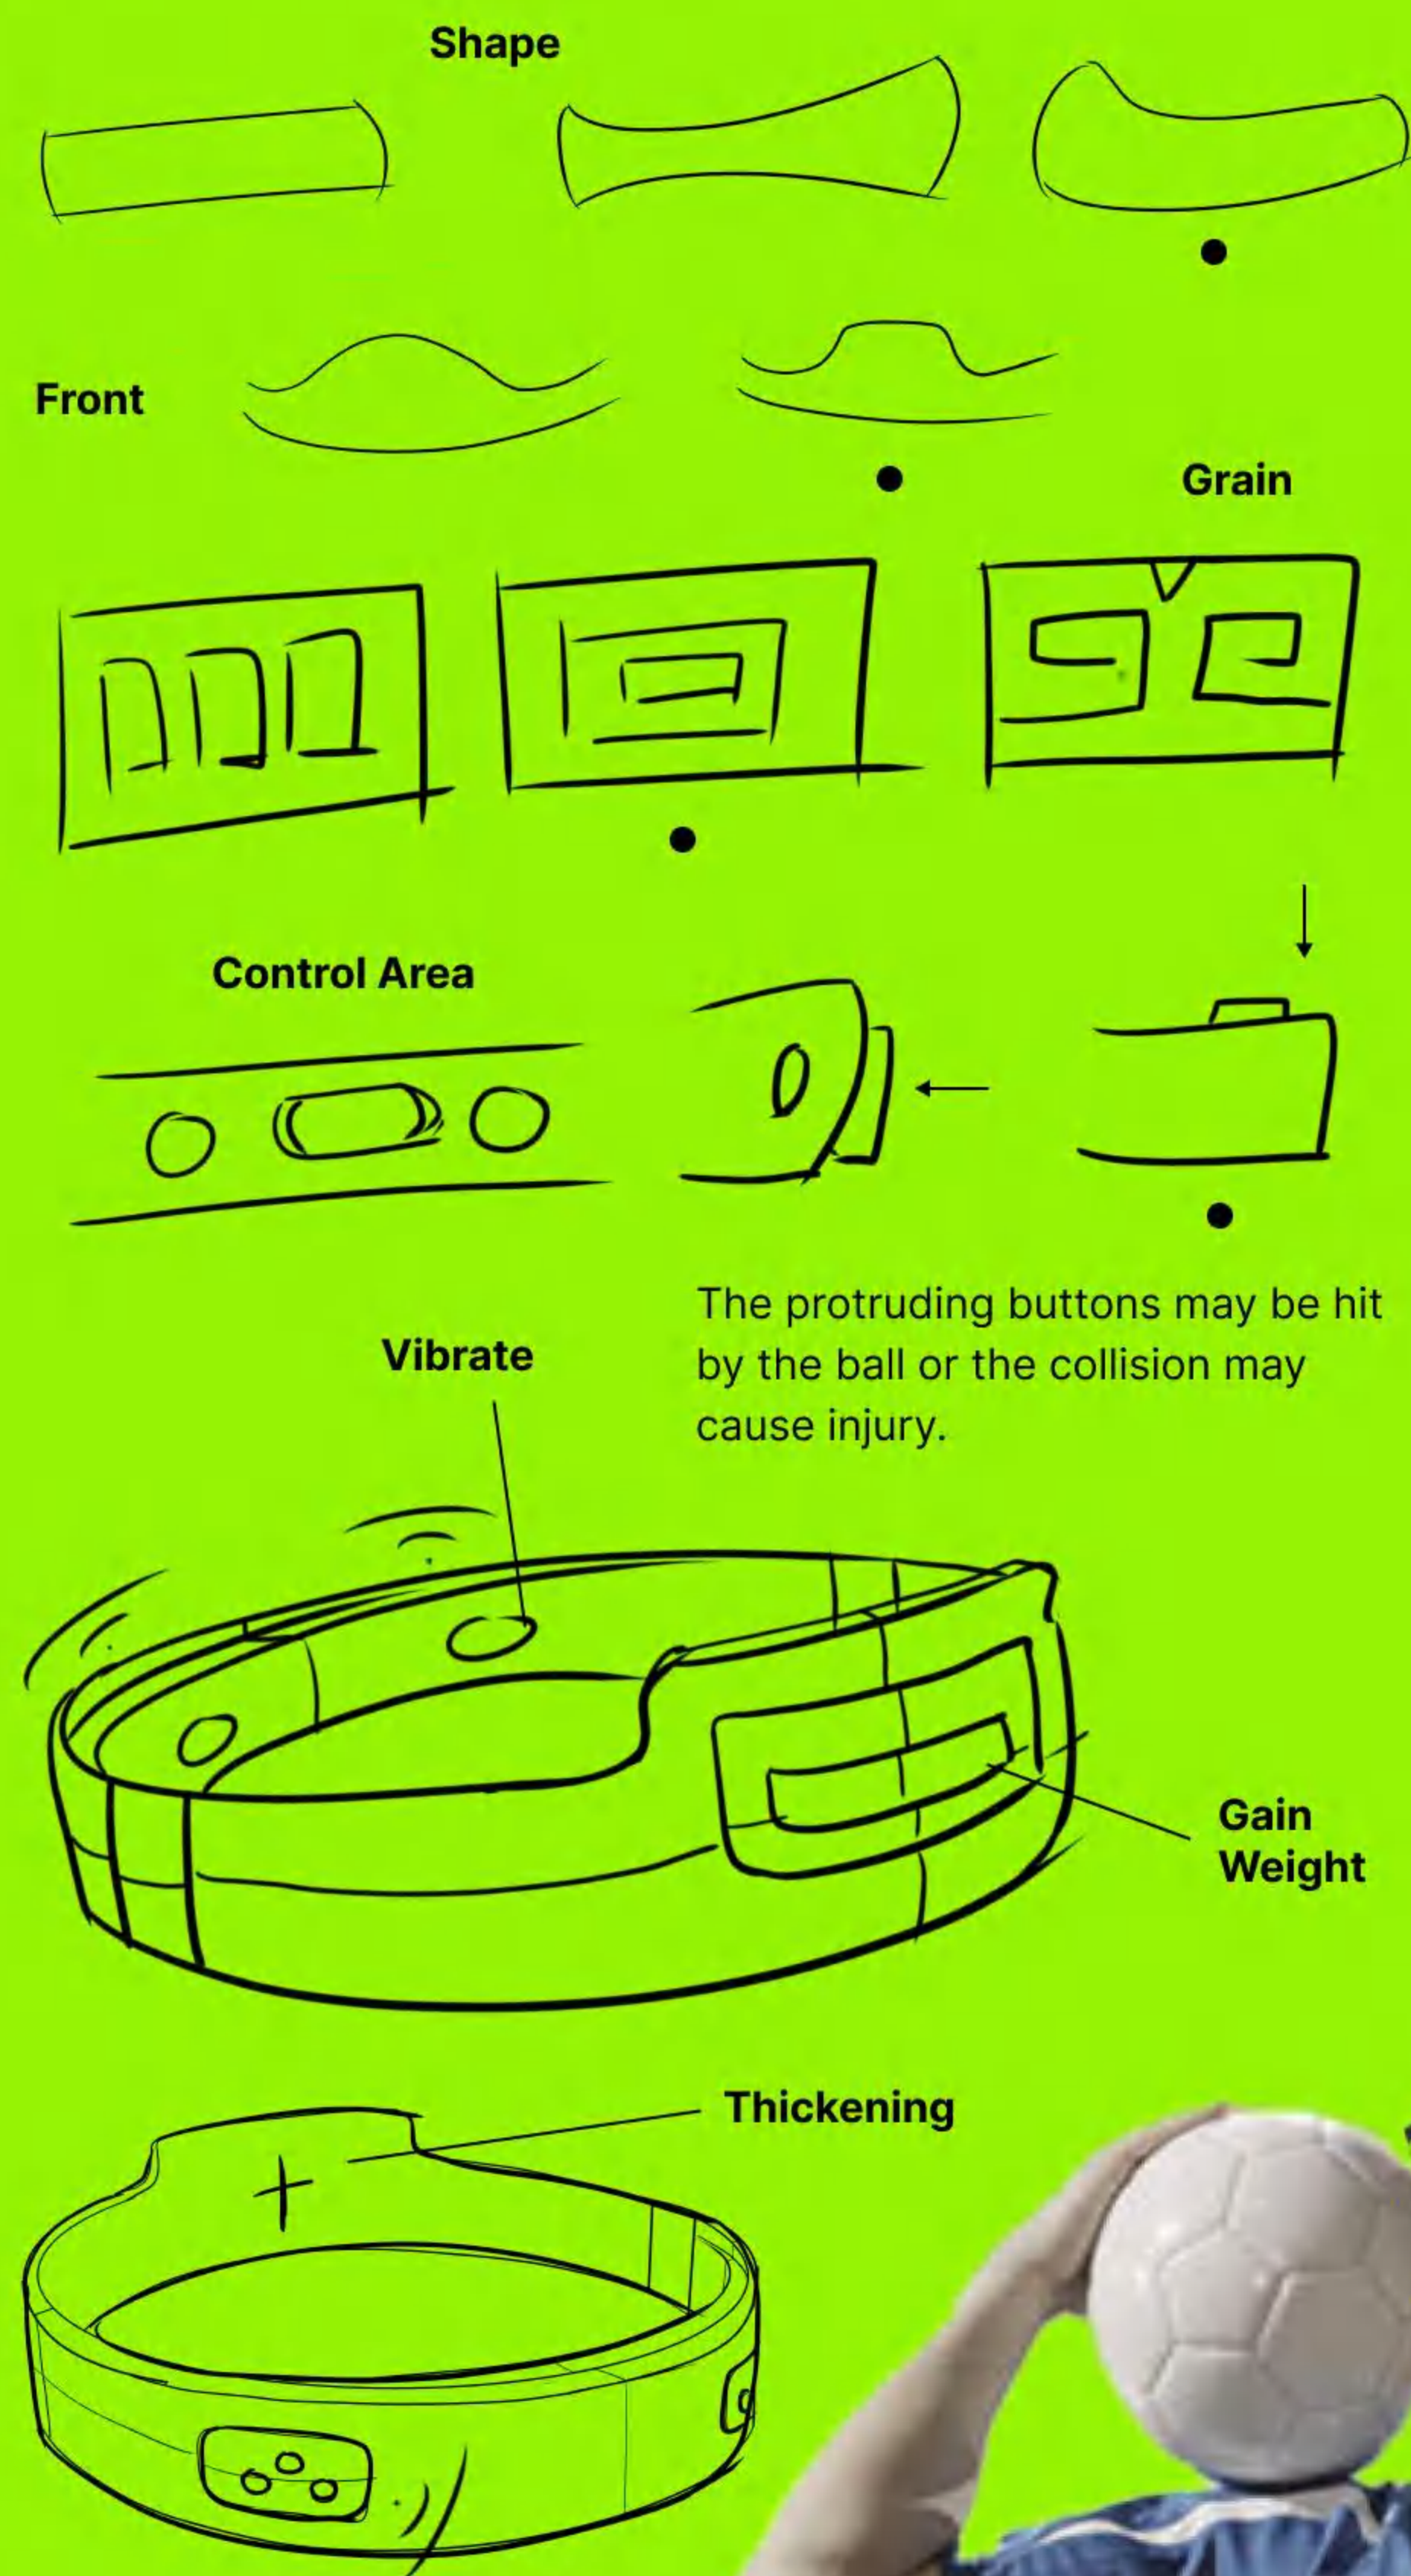

Modality of perception	Hearing	Taste	Olfactory	Vision	Touch	Intuition
Clearly graded						
Rapid response						
No interference						

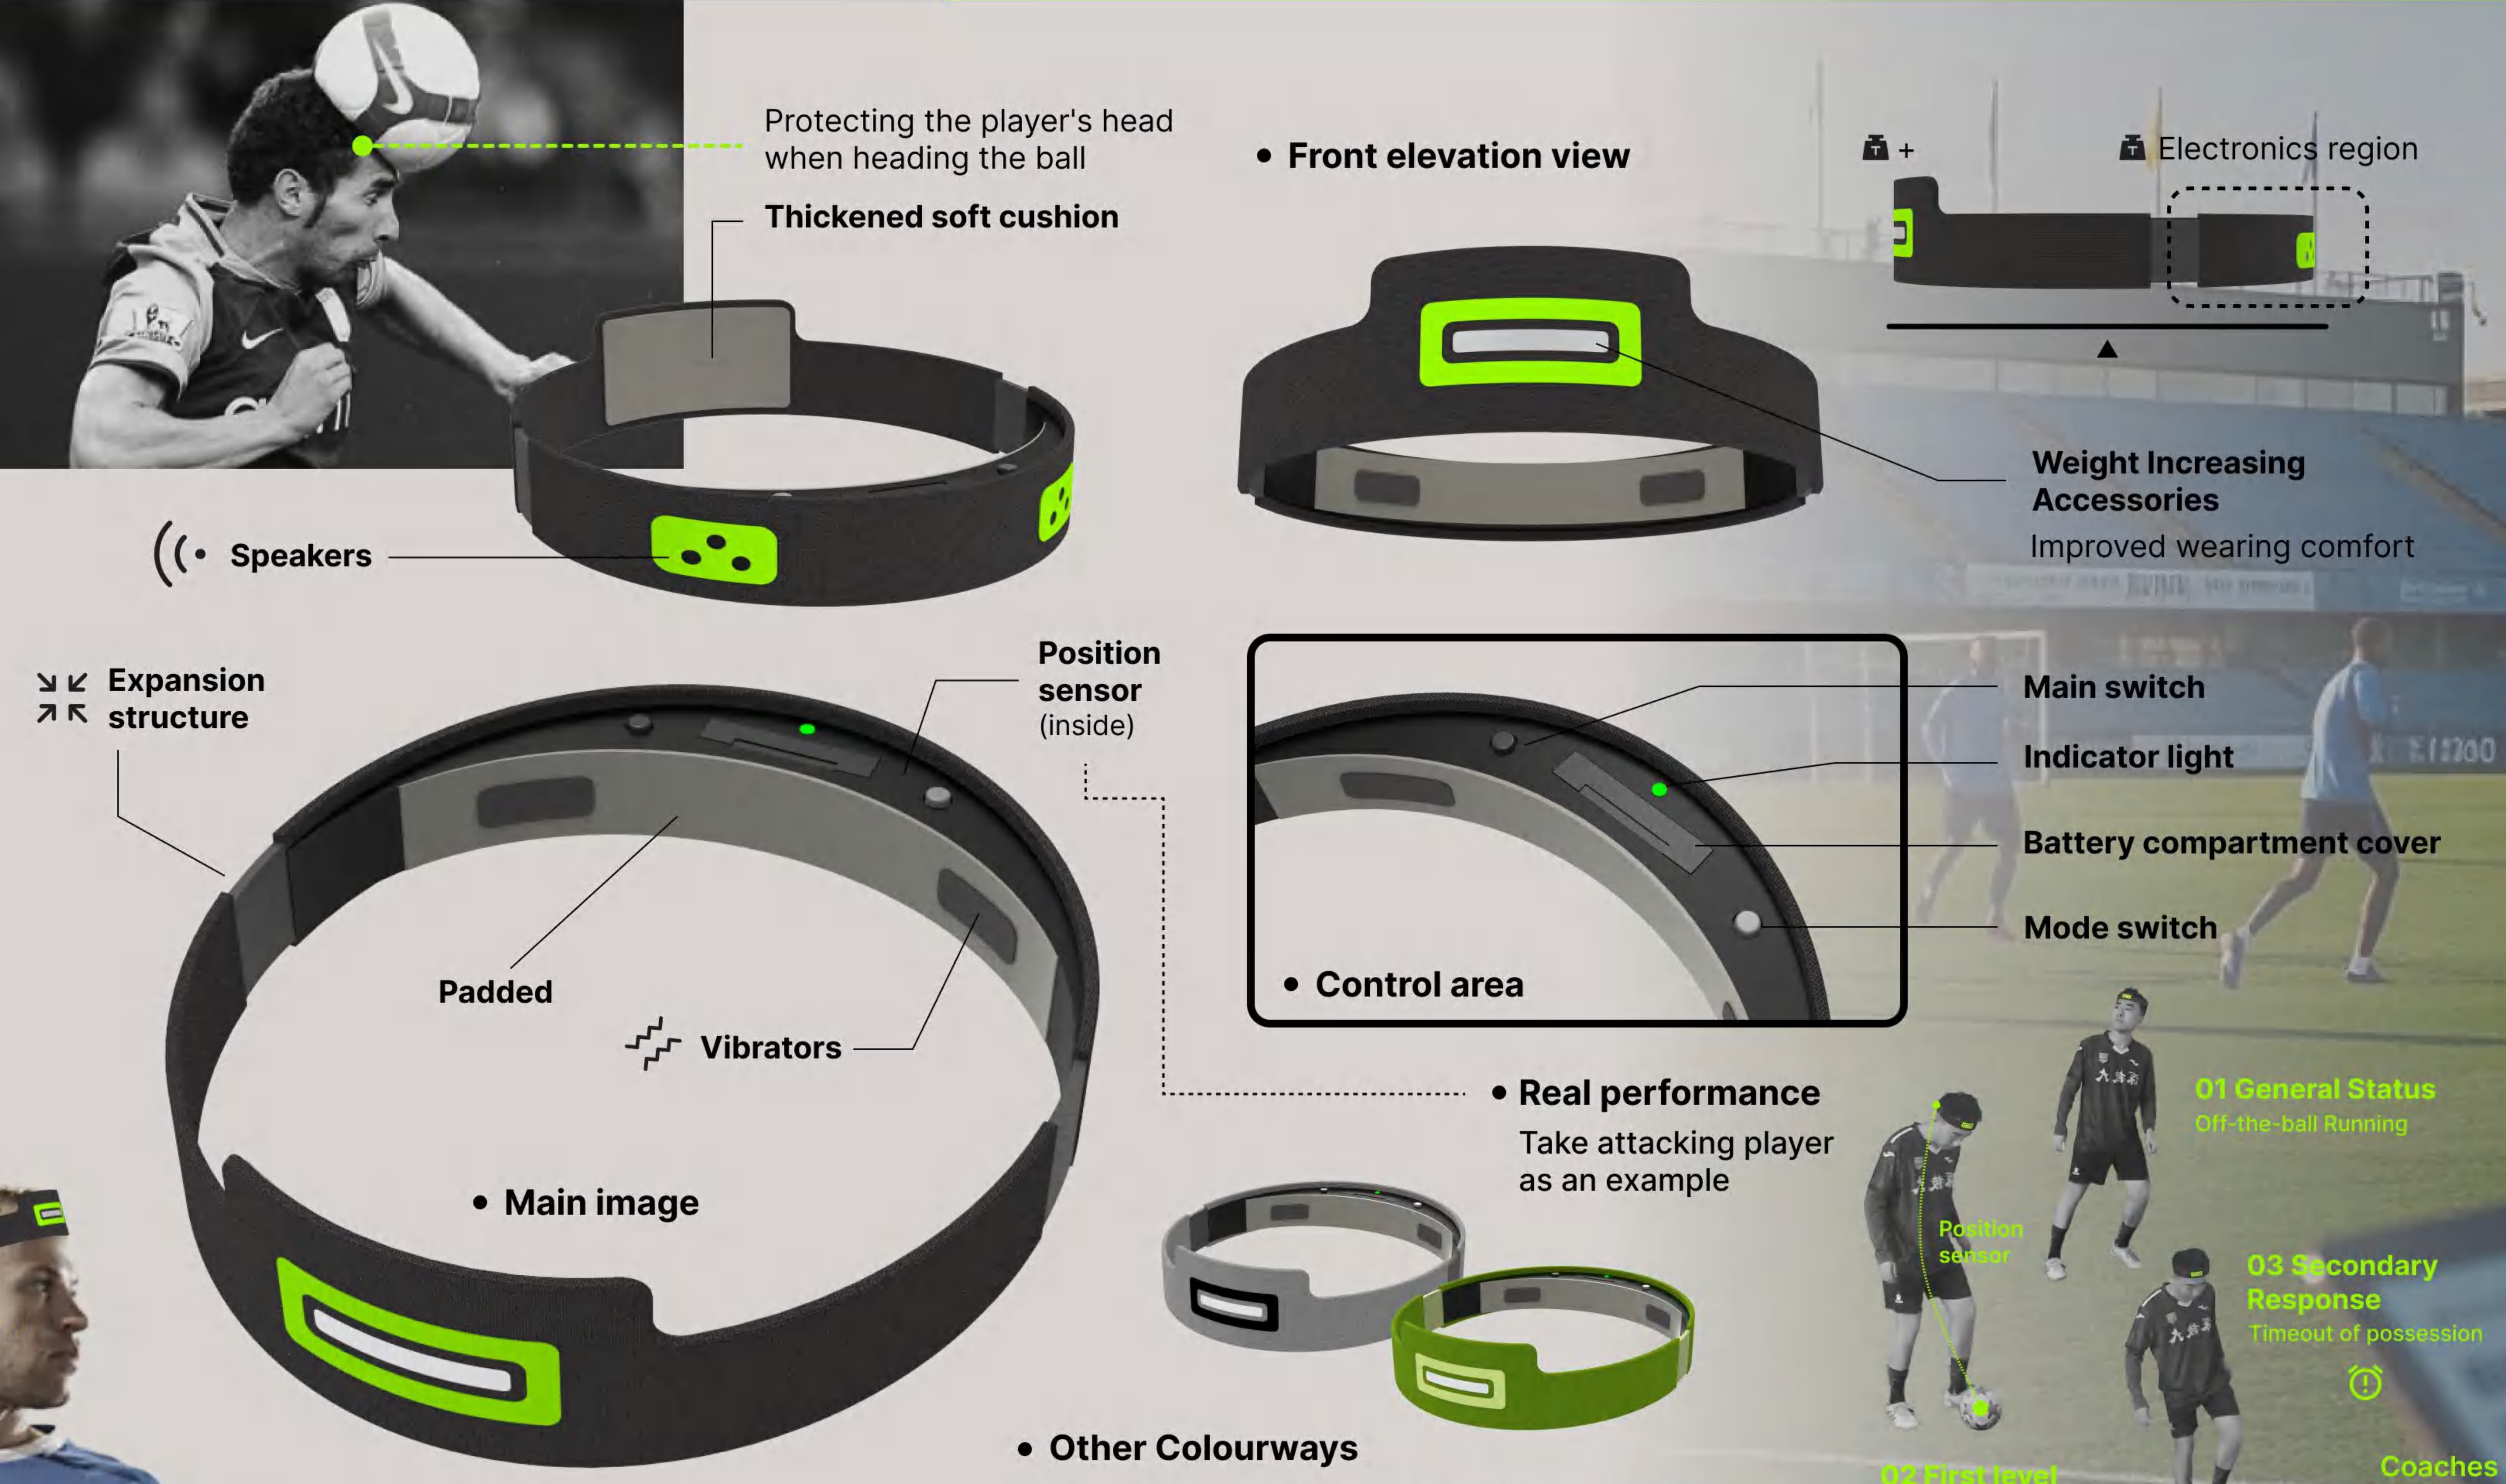

Adaptable parts Use current player equipment as an entry point to explore alternative or improved designs to reduce player discomfort and enhance simulation training

Design Showcase

Sketch

Product Effect

Coaches can analyse each player's ball handling speed and make adjustments, as well as set up rewards and penalties based on performance.

Operating state

Coach's Page

Keeping your jewellery organised

- Product Design
- Project Management
- Business Design

This project was driven by the company's strategy to enter the jewelry storage market with a mid-range product. As the product lead and ID designer, I defined the PRD by revisiting an abandoned concept and incorporating insights from competitor analysis.

The design optimized storage size and reduced logistics costs through detailed adjustments. After refining the prototype with suppliers and addressing testing issues, the product launched successfully during the peak season, earning strong user feedback.

*Some information has been pseudonymised and hidden due to commercial content

Project Origins

The team started as a bag maker, and the current main line is to design and produce **storage (protection) products for high unit-price merchandise**, mainly for overseas markets such as Europe and the United States.

Brief Background

Users

Users are more likely to choose specialised storage products for merchandise with high unit prices

Interests

Higher-unit-price items corresponding to stowage products tend to have higher premiums and more benefits

Markets

Leverage China's low-cost supply chain and overseas culture of organisation for commercial success

Project Planning

01 Long-term goal - Creating a brand with a foothold in jewellery organizer

*Three-step planning based on development costs

Jewellery stand

01

Jewellery box

02

High-grade products

03

The company has formed a more complete product matrix in the field of electronic equipment storage, in order to expand the market, decided to **enter the field of jewellery organizer**.

The global jewellery organizer market size

\$2.5 billion (2023) → **\$3.8 billion** (2032)

Jewellery Organizer Market Research Report 2032

02 Current goal - Introducing a jewellery stand that is competitive in the mid-range market ★

This range has a large number of users and most of them are more sensitive to value for money

Mid-range market

Creating a more positive rather than cheap brand image (Chasing the low-grade market)

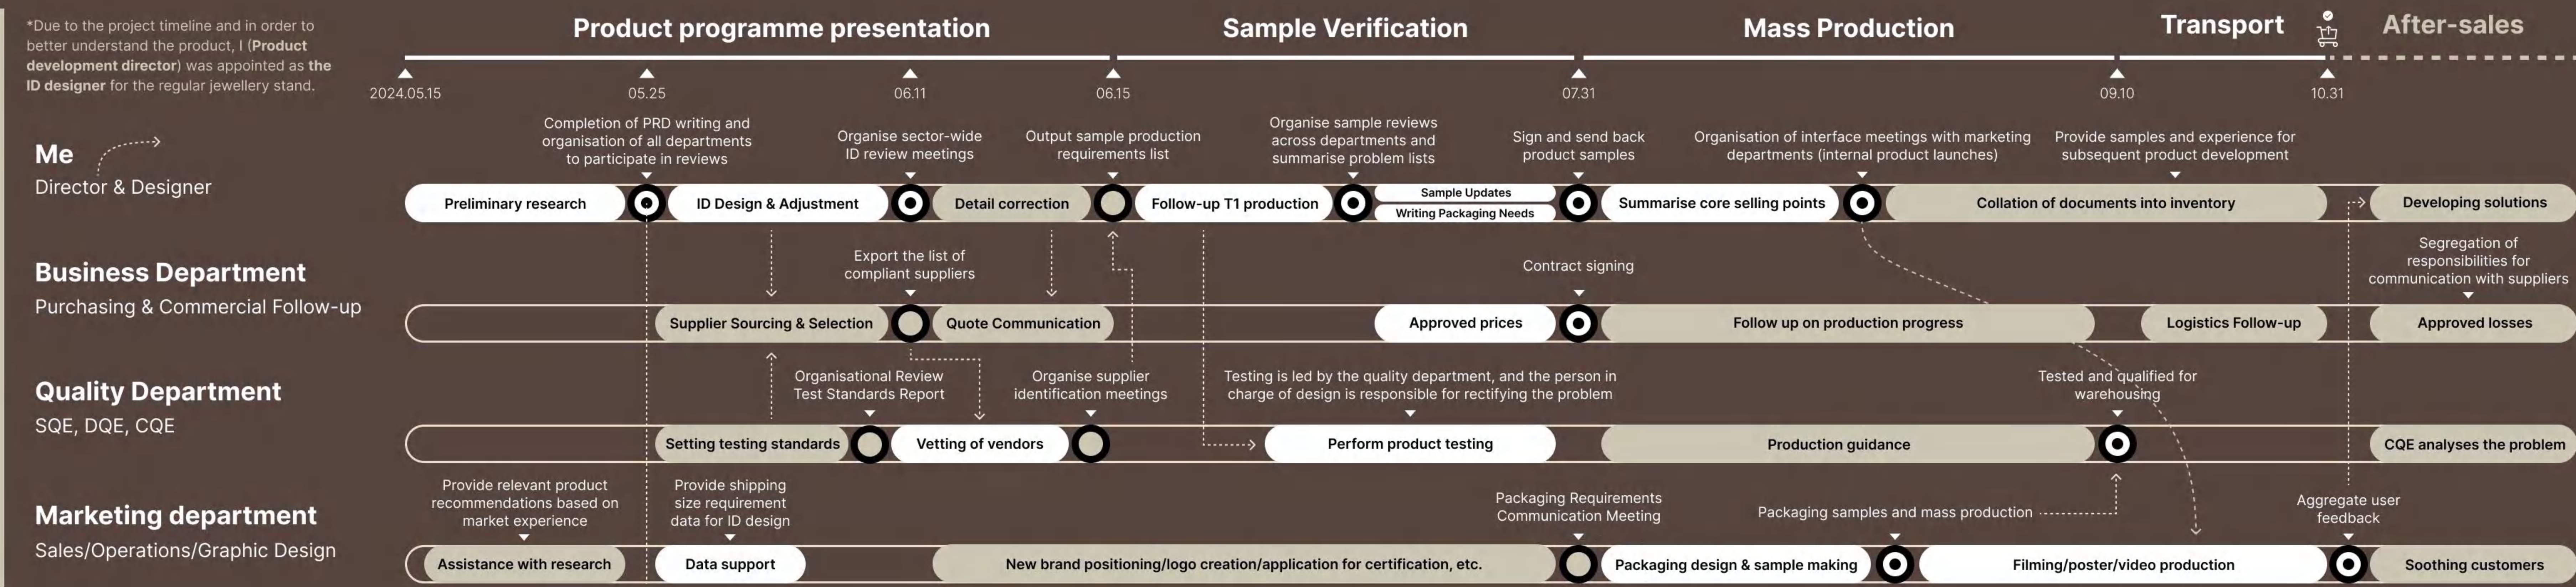

- The company had carried out a design for a jewellery stand before I joined, but abandoned it because the estimate was too high and risky. **If this product (let's call it a regular model for now) is successful in opening up the market, the previous programme can be fast-tracked to be sold as a combination of Pro models.**

Project Objectives

- ☐ Propose a product solution with a price advantage and competitive overall indicators.
- ☐ Finding the right supplier and communicating well to lay the groundwork for continued future co-operation.
- ☐ Timely listing, year-end (Black Friday/ Thanksgiving/Christmas) is the peak season for European and American markets.
- ☐ Collaborate well across departments and gain relevant development experience

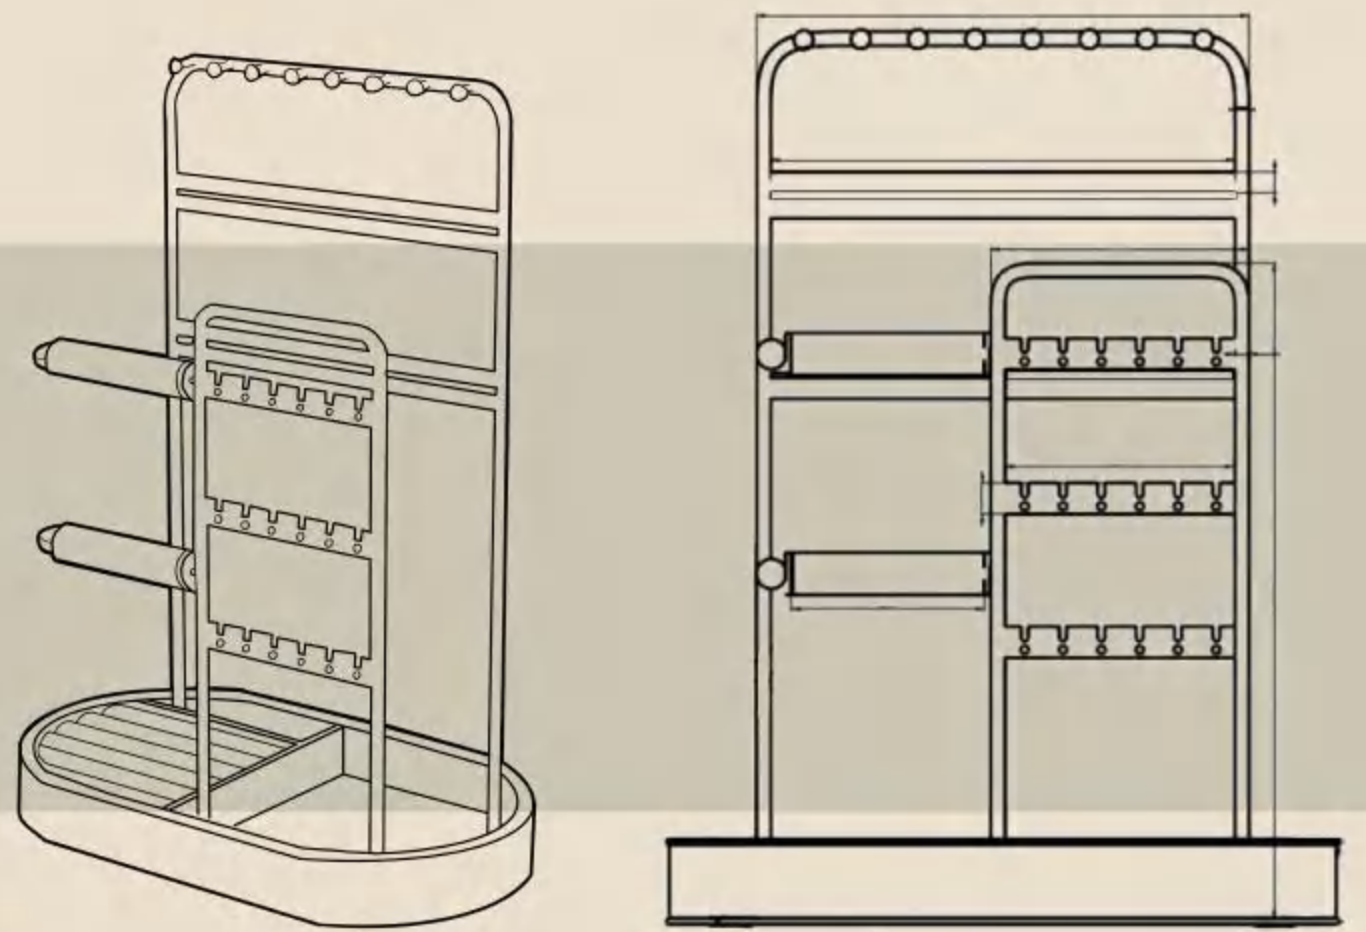

Time Management

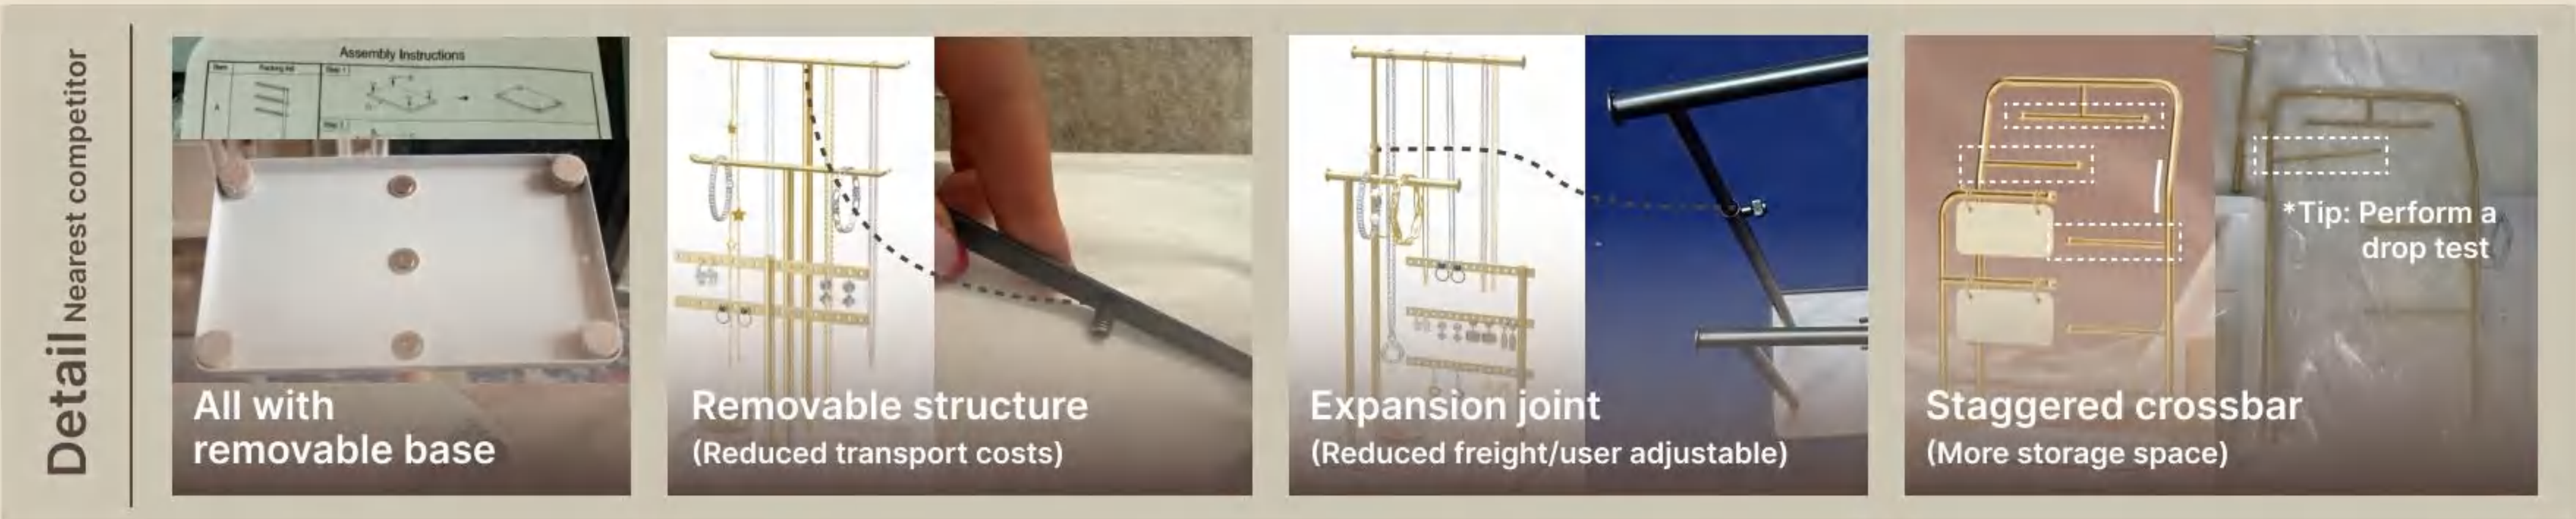

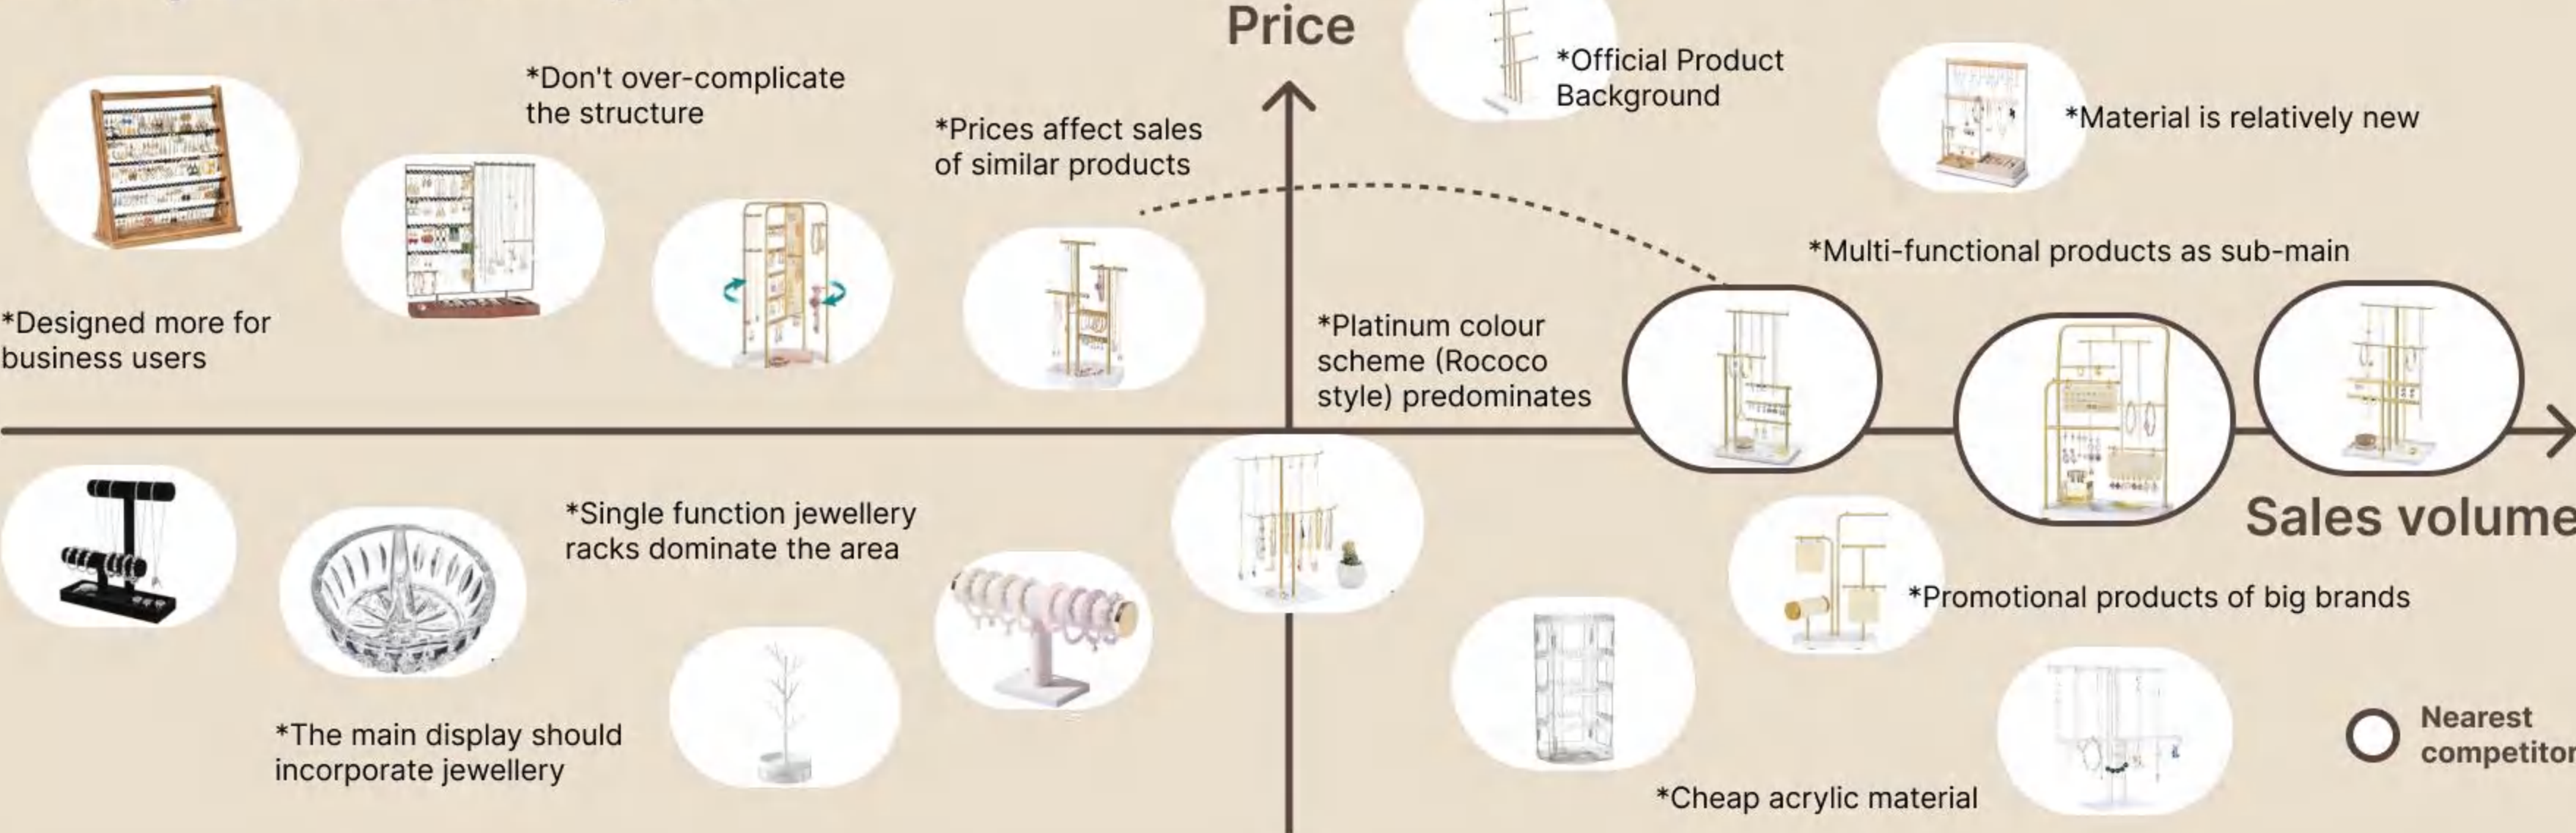

Programme research

Previous programme (Section Pro)

- Framework--- Adopts front and back tiers of sectional jewellery holders
- Material--- The main body is a metal frame. The base is velvet lined with a PU wrapped runway circle

Competitive Analysis

Product Requirement Document

Multi-functional zoning

It has been suggested that the regular model to focus on specific jewellery storage (e.g., earrings/necklace), but the research led to adopting the multifunctional partition design.

Details - Cost Control

Appropriate detailing can be considered for cost control (creating more marketing space) without compromising functionality and user experience.

Familial Series

In order to create a better family product effect, some of the features of the previous scheme drawings can be retained and adjusted in size to differentiate them

Commercial Canvas

Key Partners	Key Activities	Value Propositions	Customer Relationships	Customer Segments
Raw Material/OEM Supplier	Research & Design	Cost-effective products	Organisation of holiday promotions	Residential customer
Logistics and Transport Companies	Supplier Selection	Providing users with quality products that make jewellery storage and display well organised	Quality after-sales service / regular visits	Mostly female users
Overseas Market Agents	Online Sales	Variety of options	Channels	Upper middle income
Overseas Warehouse Management	Logistical transport	Timely follow-up of new products on the shelves after the successful launch of the first model (regular version)	Amazon Selling	Have more jewellery or accessories
Product Certification Organisation	Mass Production		YouTube Promotion	
	Website Operations
